

DYNAMIC SYSTEMS

Modeling, Simulation, and Control

CRAIG A. KLUEVER

WILEY

Contents

Preface vi

1 Introduction to Dynamic Systems and Control 1

- 1.1 Introduction 1
- 1.2 Classification of Dynamic Systems 2
- 1.3 Modeling Dynamic Systems 4
- 1.4 Objectives and Textbook Outline 5
- References 6

2 Modeling Mechanical Systems 7

- 2.1 Introduction 7
- 2.2 Mechanical Element Laws 7
- 2.3 Translational Mechanical Systems 13
- 2.4 Rotational Mechanical Systems 24
- Summary 30
- References 30
- Problems 30

3 Modeling Electrical and Electromechanical Systems 43

- 3.1 Introduction 43
- 3.2 Electrical Element Laws 43
- 3.3 Electrical Systems 46
- 3.4 Operational-Amplifier Circuits 54
- 3.5 Electromechanical Systems 57
- Summary 68
- References 69
- Problems 69

4 Modeling Fluid and Thermal Systems 80

- 4.1 Introduction 80
- 4.2 Hydraulic Systems 80
- 4.3 Pneumatic Systems 93
- 4.4 Thermal Systems 99
- Summary 104
- References 105
- Problems 105

5 Standard Models for Dynamic Systems 115

5.1	Introduction	115
5.2	State-Variable Equations	115
5.3	State-Space Representation	119
5.4	Linearization	128
5.5	Input-Output Equations	133
5.6	Transfer Functions	136
5.7	Block Diagrams	139
5.8	Standard Input Functions	143
	Summary	145
	Problems	146

6 Numerical Simulation of Dynamic Systems 156

6.1	Introduction	156
6.2	System Response Using MATLAB Commands	157
6.3	Building Simulations Using Simulink	162
6.4	Simulating Linear Systems Using Simulink	165
6.5	Simulating Nonlinear Systems	170
6.6	Building Integrated Systems	178
	Summary	183
	References	184
	Problems	184

7 Analytical Solution of Linear Dynamic Systems 197

7.1	Introduction	197
7.2	Analytical Solutions to Linear Differential Equations	197
7.3	First-Order System Response	205
7.4	Second-Order System Response	213
7.5	Higher-Order Systems	230
7.6	State-Space Representation and Eigenvalues	232
7.7	Approximate Models	235
	Summary	237
	Reference	238
	Problems	238

8 System Analysis Using Laplace Transforms 247

8.1	Introduction	247
8.2	Laplace Transformation	247
8.3	Inverse Laplace Transformation	254
8.4	Analysis of Dynamic Systems Using Laplace Transforms	259
	Summary	271
	References	271
	Problems	271

9 Frequency-Response Analysis 277

9.1	Introduction	277
9.2	Frequency Response	277

9.3	Bode Diagrams	290
9.4	Vibrations	306
	Summary	313
	References	313
	Problems	313
10	Introduction to Control Systems	322
10.1	Introduction	322
10.2	Feedback Control Systems	322
10.3	Feedback Controllers	329
10.4	Steady-State Accuracy	344
10.5	Closed-Loop Stability	350
10.6	Root-Locus Method	352
10.7	Stability Margins	373
10.8	Implementing Control Systems	381
	Summary	385
	References	385
	Problems	386
11	Case Studies in Dynamic Systems and Control	397
11.1	Introduction	397
11.2	Vibration Isolation System for a Commercial Vehicle	397
11.3	Solenoid Actuator–Valve System	409
11.4	Pneumatic Air-Brake System	417
11.5	Hydraulic Servomechanism Control	427
11.6	Feedback Control of a Magnetic Levitation System	444
	Summary	455
	References	455
Appendix A	Units	457
Appendix B	MATLAB Primer for Analyzing Dynamic Systems	459
B.1	Introduction	459
B.2	Basic MATLAB Computations	459
B.3	Plotting with MATLAB	462
B.4	Constructing Basic M-files	463
B.5	Commands for Linear System Analysis	464
B.6	Commands for Laplace Transform Analysis	465
B.7	Commands for Control System Analysis	467
Appendix C	Simulink Primer	469
C.1	Introduction	469
C.2	Building Simulink Models of Linear Systems	469
C.3	Building Simulink Models of Nonlinear Systems	478
C.4	Summary of Useful Simulink Blocks	482
Index		485
