heel  (n) (seamanship, navig) the term heel is used to describe a ship that has been forcibly inclined by
external forces (wind, wave, etc.); The sideways incline of a sailing vessel due to the force of the wind.

The sideways incline of a sailing vessel due to the force of the wind. 

This includes understanding what impact the vessel’s speed, heading, heel, and trim will have on the crew as it abandons ship. Despite the skipper’s efforts, he was unable to free the dredge or correct the heel before downflooding occurred into the engine room via the vents sited under the bulwark. 

The ship has a heel brod se nagnuo, angle of heel 

Although your vessel may appear to have good initial stability, ensure that downflooding does not occur before 40 degrees of heel so as to maintain an adequate righting moment at greater angles of heel. The boat ran aground and her angle of heel increased to 30° as a result of heavy wind and waves. ... specific consideration should be given to ensure the viability of passenger muster stations following the effects of a large angle of heel. It has been estimated that these intakes would have been immersed at only 17 degrees of heel. The boat was brought onto the desired heading and was making about 41/2 knots when she grounded violently, and after a few bounces took on a substantial angle of heel.

At very close range the target began to heel and she turned to PORT. A large wave hit the vessel on her port side, causing her to heel about 35° to starboard, before she came back to an average of about 25°. The vessel immediately yawed and heeled to starboard. The ship rolled very heavily several times, heeling the ship to more than 30°.

Before the mainsail could be reefed, the heel rapidly increased, and at about 0320 the boat very quickly inverted, trapping the skipper inside the cabin.

The impact caused her to heel over violently, and seas poured in over her port quarter.

Concern grew as the height of the waves and the pitching and rolling of the vessel increased. A Significant Wave Height of 6 metres was predicted, with a maximum wave height of 9. 

Taking into account the height of tide and an estimated squat of 0.9 metre, the vessel would have grounded at a
charted depth of 10.13 metres,...

humidity /ˈhjuːmɪdɪtɪ/ \( \text{(marine eng)} \) vlažnost: Bypass valves on the intercooler are modulated depending on the pressure and relative humidity of the air so that condensation formation can be avoided. MAN Diesel has also pursued NOx reduction by increasing the humidity of the charge air with water vapour. Although the vessel was operating in an area with high humidity, the possibility of more water than usual accumulating in the service tanks was not considered. Increased air temperature, in particular, reduces efficiency and lowers fuel economy; relative humidity has a less significant influence, though at high inlet temperatures an increase in humidity will have an adverse effect on sfc.; 2 \( \text{(cargo handling)} \) vlažnost: Are the temperature / humidity recorders in the hold(s) operational? The temperature / humidity recorders in the hold(s) will be operational in han an hour.; 3 \( \text{(meteorol)} \) vlažnost: Heat sickness can frequently occur onboard ships due to the extreme temperature and high humidity conditions.

hydraulic jack (n) 1 (marine eng) hidraulički pritezni uređaj (za vijke): Again the hydraulic jack was pumped to approximately 250 bar pressure, the pin was struck again and the deflected maul landed heavily on the leading seaman’s right hand. There are four bolts at each connection point which help for assembly and removal of the connecting rod, and are tightened to their required torque using hydraulic jack. Extracting the sheave pin appears to be in order, the risk assessment must consider the possibility of two more hazards when applying tension with the hydraulic jack; 1) the rod coming off the pin due to corroded / wasted threads, and, 2) the threaded rod fracturing, especially if not of approved strength. Therefore, most of the important or big screws are tightened hydraulically on ships such as cylinder head nuts, exhaust valve nuts, for crank pin bearing, cross head bearing, main bearing, tie bolts, etc. (http://marineengineeringonline.com/an-introduction-to-hydraulic-jacks-on-ships/)

All four were taken off by the inshore lifeboat, and taken to hospital suffering from mild hypothermia. It also increases susceptibility to hypothermia and reduces the chances of survival in cold water. The 7-man crew were then airlifted to hospital and treated for hypothermia and shock. The helicopter had a task to airlift the casualty to hospital as a further precaution against secondary drowning or hypothermia. The sailors had either succumbed to hypothermia or drowned. ignite /ɪɡˈnaɪt/ (v) (marine eng, safety) zapaliti( se), upaliti se (motor): The compressed air from the bottle is necessary to ignite the fuel. The starboard cargo engine (its lever left in the ON position) must have developed high pressure in the cylinder causing the safety valve to crack open and ignite the flammable gases in the engine room. If the impact had been more direct, the steel plate could have pierced the tank, and also provided the energy to ignite the flammable mixture of fuel vapour and air which would have formed within the truck’s empty tanks. The cargo was liable to self-heat and ignite spontaneously because it contained fine shavings contaminated with cutting oil, cast iron borings and organic flammable materials. Unfortunately, the junior engineer succeeded in his attempt to ignite the boiler and the residual fuel ignited explosively.

inadequate (adj) neodgovarajući, neprikladan: ... a hazardous condition was found but the repair was grossly inadequate and did not eliminate the unsafe condition. Inadequate assessment of needs and risks; He came to the engine room and observed that all the sea water pumps were showing inadequate discharge pressure. The securing of these drums was evidently inadequate for the intended purpose: either the lashings used or their securing points were not capable of restraining the oil drums or were poorly adjusted/secured. An accident can be defined as an unexpected hazardous occurrence caused by unsafe practices that arise from inadequate knowledge, improper training, and failure to follow proper procedures, and usually resulting in loss of life or injury to personnel, damage to property etc. The events leading to the capsize were a mix of complacency, poor shipboard procedures and inadequate leadership, both afloat and ashore. The root cause of the accident was the failure of the pilot ladder due to inadequate maintenance and inspection. The fact that the boats involved in the collision were not carrying radios to communicate their predicament demonstrated the inadequate planning for the passage. Inadequate risk assessment and work planning; position of high sea suction and changes to draughts not adequately considered. Inadequate securing of items, cargo nets not used in conjunction with pallets. Improper motivation arising from complacency. inadequate supervision, operating without authority and defective equipment also contributed to the error chain.

On the bridge were the master, pilot, helmsman and the chief mate *in charge of the watch*. Although they might be qualified to be *in charge of a navigational watch*, the less experienced still require careful monitoring and close support, particularly in potentially challenging situations. The officer *in charge of anchoring* must know the number of shackles available on each anchor. An experienced and responsible deck officer shall be *in charge of the forward station* when connecting/disconnecting chafe chain; The
person in charge of the mooring party does not seem to have appreciated that it is extremely dangerous to heave up on the spring whilst the vessel is still moving ahead The Chief Engineer, or Chief Engineering Officer, is in charge of the Engine Department. The master was in charge of the bridge navigation watch and was accompanied by the bosun and the helmsman.

inducement freight rate (n) (mar law, shipping econ) Minimum quantity of cargo or freight required by a shipping line to make it worthwhile to call at a particular port of loading or discharging.
inductance (n) (electr) indukcija
induction /inˈdʌkʃən/ 1 (electr) indukcija: Synchronous speed: The speed the machine will attain when it is driven by a three-phase squirrel-cage induction motor and there is no slip in the motor and the drive system. 2 (marine eng) usis, usisavanje, puštanje / uvodenje: The time period for the induction of starting air To improve the induction of fuel/air mixture into the crankcase, one-way valves (check valves, reed valves, or rotary valves) may be used in the intake port to allow th The induction stroke commences when the inlet valve opens 10° before tdc when air is drawn into the cylinder as the piston moves down.
industrial action (n) (mar law) steps such as a strike or work to rule that workers of a firm may take to enforce their demands or to press addressing of their grievances.
(industrial action)
industrial dispute (n) (mar law) a disagreement between workers and management over pay, working conditions, hours of work, etc., especially one that includes strikes (= workers refusing to work):

Inert gas plant

*inert gas plant*  
*inert gas inlet*  
*inert gas*  
*inert*  
*inefficient*  
*ineffective*

Possible for inerting in order to avoid soot generated from the inert gas plant entering the tanks.
inert gas system (=IGS) (n) (cargo handling, safety) sustav inertnog plina, sustav za inertiranje atmosfere: Line clearance was undertaken for a 45-minute period during which the inert gas system (IGS) was not run.

inertia /ɪˈnɜːʃə/ (n) inercija, tromost: The first-order inertia force from the lower piston is balanced against the corresponding force from the upper pistons, and a well-balanced engine is obtained. In this case he demonstrated inaccuracy in visual range finding abilities and estimation of own ship speed as well as possible unawareness of ship’s inertia characteristics. The inertia forces originating from the unbalanced rotating and reciprocating masses of the engine create unbalanced external moments although the ext The crank also has to absorb the inertia loading due to the conrods and pistons, which easily amounts to several tons on each cylinder. A more robust rod pin end enhances the durability required for the increased piston speeds and higher inertia loads.

inertial navigation (n) (navig) a navigation aid that uses a computer, motion sensors (accelerometers) and rotation sensors (gyroscopes) to continuously calculate via dead reckoning the position, orientation, and velocity (direction and speed of movement) of a moving object without the need for external references. It is used on vehicles such as ships, aircraft, submarines, guided missiles, and spacecraft. (Wikip) inercijalna navigacija

inerting (n) (safety, cargo handling) A procedure used to reduce the oxygen content of a vessel’s cargo spaces to 8 percent or less by volume by introducing an “inert” gas blanket such as nitrogen or carbon dioxide or a mixture of gases such as flue gas. (www.euronav.com) inertiranje

infectious disease /ɪnˈfekʃəs diˌzi/ (n) (med) = contagious disease infektivna bolest, zarazna bolest

infestation (n) (cargo, med) zaraza (kukcima): Australia engages Quarantine measures to combat possible Khapra Beetle infestation. https://www.shippingandfreightresource.com/

infested (adj) (safety) zaražen

infirmary (n) (med, nav arch) brodska bolnica

inflammability (n) (safety) nezaplaljivost

inflatable boat /ɪnˈflətəbl/ (=inflatable) (n) (sailing/boating/yachting, safety) gumenjak: A rigid inflatable boat (RIB) was being employed as a support boat for an event on the water. Fast turns in rigid inflatable boats generate large forces which can throw personnel overboard, despite their best attempts to hold on.

inflation cord (n) (safety) konopac za napuhavanje (prsluka za spašavanje)

information (n) (comm) obavijest obtain information dobiti / ishoditi

informacije / podatke, scanty information oskudni podaci: A master’s reliance on scanty VHF information and another’s failure to keep a proper lookout contributed to a collision between a containership and an oil tanker off Jebel Ali earlier this year, AIS information informacije dobivene sustavom AIS: The lack of AIS information possibly contributed to the tanker master’s ignorance of the container ship’s identity immediately before the collision., exchange information razmijeniti informacije: The master and pilot exchanged information on the vessel’s status and briefly discussed the planned departure manoeuvre., wait for further information čekati na daljnje informacije: Approximately 30 minutes before arrival at the station he was therefore advised to stop and wait for further information., provision of information davanje informacija, pružanje informacija: Provision of information to the surveyor concerning the normal working level of the liquid contained within a tank, and …, unambiguous
**information** nedvosmislene informacije: When crew critical to an operation are located out of sight of each other, it is vital that unambiguous information is relayed, and that all involved understand their role and responsibilities.

**Information and Traffic Organisation Service (n) (UK) (navig, ports, safety)**

Služba za informiranje i organizaciju prometa brodova (UK): Traffic Organisation Services are concerned with, for example: ● forward planning of vessel movements ● congestion and dangerous situations ● the movement of special transports ● traffic clearance systems; ● VTS sailing plans; ● routes to be followed; and ● adherence to governing rules and regulations. www.gov.uk/maib

**information exchange (n) razmjena informacija, razmjena podataka:** The Master/Pilot information exchange had been carried out in accordance with the Company Safety Management System and the Master had discussed the prevailing weather conditions had already let go and by the time the pilot arrived on the bridge the master had started the departure manoeuvre without any form of master / pilot information exchange or notification of his intentions. The master and pilot shall exchange information regarding the navigation procedures, local conditions and the ship’s characteristics. The ship’s stability was determined using the vessel’s on board stability computer with the information provided by the staff captain and the chief engineer.

**information service (n) (navig, safety)** služba koja priprema izvješća i upute brodovima u plovdbi u području nadležnosti o događajima i okolnostima zbog kojih bi mogli biti ugroženi ljudski životi, sredstva i morski okoliš služba izvješćivanja: Three levels of service can be provided: an information service (INS), a navigational assistance service (NAS) and a traffic organisation service (TOS). The VTS Information Service gave regular traffic broadcasts on the port operations VH radio channel.

**infrared** (adj) infracrven: The coastguard helicopter arrived within 5 minutes and, using the on board infrared (IR) equipment, was able to identify to the skipper that the seat of the fire was in the starboard after corner of the engine room.

**infrastructure /ˈɪnfrastrʌktʃər/ (n) (ports)** infrastruktura, podgradnja: The Port Authority is investing heavily in infrastructure at its container terminals and other facilities and will continue to deliver a high level of service to all carriers. There were no injuries or pollution, but damage was caused to infrastructure on the quayside and the vessel’s hull in way of empty ballast tanks. This resulted in the vessel making multiple contacts with the jetty’s infrastructure, resulting in material damage to both the jetty and the vessel before control was regained. The port authority commends government for its investment in infrastructure projects that will address transportation challenges along Canada’s trade corridors, improve the movement of goods through the port, and help ease the impacts of growing trade on local communities. https://www.maritimeprofessional.com/news/federal-funding-port-vancouver-317672

**port infrastructure** sea locks, waterways, breakwaters, quay walls, wharves, docks, piers, jetties, and main roads in a port lučka infrastruktura: To ensure safety of personnel and port infrastructure, we emailed a request to the overseas shipper asking for a document stating the actual weight of each unit as shipped, shore infrastructure obalna infrastruktura: ears in this area, involving loss of control of large vessels during times of strong tidal flow, resulting in contact damage to vessels and shore infrastructure.

**infringe (v) (mar law)** povrijediti, prekršiti (propise, ugovor) infringement (n) (mar law) kršenje (propisa, ugovora), prekršaj, povreda (propisa): Failure to comply with certification requirement may result in a heavy fine, arrest or a penalty due to the infringement of flag/port state requirements.

**in good order and condition (mar law)** u dobrom izgledu i stanju, klausula u dobrom izgledu i stanju
in good working order  (safety) u dobrom stanju za normalan rad: Check if the inert gas system (IGS) is fully operational and in good working order. Arrangements (pilot ladder, accommodation ladder, winches, wires, davits, sheaves and all associated equipment) have been thoroughly inspected and are in good working order, and comply with IMO recommendations. In addition to authorised service personnel, crew have equal responsibility for ensuring that lifeboats are in good working order and are maintained and operated properly.

ingress /ˈɪŋɡrɛs/ (n) (safety) prodor ingress of ballast water into holds (cargo, mar ins) prodor balastne vode u brodska skladišta: the Master discovered that there was water ingress in No 3(P) ballast deep tank. Ingress of water prodor vode (u brod): Ship's tanks and compartments were sounded and monitored for any ingress of water or possibility of pollution. The chief officer left the bridge to see if there was any water ingress in the ballast tanks. No water ingress or other damage was found. An underwater inspection of vessel revealed water ingress in a couple of tanks which will require a complex salvage operation to make safe. www.gcaptain.com The forward void spaces were also reported to have water ingress.

inherent /ɪnˈhɪrənt/ (adj) sadržan u nečem, inherentan, sam po sebi: This points out the dangers inherent in false information from ARPA at low ranges and fast moving vessels in these close quarter situations. The risks inherent in all lifting operations, including the launching of watercraft, must be rigorously assessed and safe working practices developed. inherent vice skrivena mana

inherent vice  (n) (nav arch) .. any existing defects, diseases, decay or the inherent nature of the commodity that will cause it to deteriorate with a lapse of time. Examples of goods that are subject to inherent vice are agricultural commodities, such as fruits and vegetables, and tobacco, which have the tendency to over-heat and to be subject to spontaneous combustion.

(https://www.flexport.com/glossary/inherent-vice/) skrivena mana: As opposed to an external occurrence, such as a forklift puncturing a packaged item, inherent vice cannot be insured against damage or loss since the defect or characteristic is not visible to the carrier or insurer.

https://www.flexport.com/glossary/inherent-vice/

inhibit  (v) 1 kočiti, ukočiti; 2 spriječiti: The flame deck has drilled coolant channels to inhibit large thermal stresses. To reduce the corrosive action and inhibit the formation of scale deposits in the system it is usual to provide some form of water treatment.

inhibitor  (n) (marine eng, chem) usporivač, inhibitor: Any substance which retards or prevents such chemical reactions as corrosion or oxidation. (http://www.marinedieseleurope.com/)

in-house  (adj) (mar law, shipping econ) vlastiti, unutar kompanije: The Club’s in-house lawyers are available to advise on any issue relating to the chartering of vessels, including advising on contract terms, and to assist in resolving We do expect a certain level of certification for some positions and lean mostly on the in-house/on-the-job training process. Trainings are conducted by in-house trainers and also those engaged from reputable consultancies such as... The new vessel joins two other test tanks and increases the in-house pressure testing capability and services offered to outside companies needing pressure testing.

in irons (=in-irons)  (sailing/boating/yachting) when the bow of a sailboat is headed into the wind and the boat has stalled and is unable to maneuver; The boat is pointing into the wind with the sails flapping, but it will not pay off on to either tack by its own momentum and is temporarily out of control. https://www.ypiayachts.com/ jedrilica okrenuta sasvim u vjetar, bez kretanja
initial action stage (n) (safety) A period during which preliminary action is taken to alert search and rescue facilities and obtain amplifying information. (IAMSAR/Camsar 2014) 

Preliminary action is taken to alert search and rescue facilities and obtain amplifying information. (IAMSAR/Camsar 2014)

initial alarm (n) (safety, marine eng) prvi alarm: Main power was restored 15 hours after the initial alarm.

initial course (n) (navig, safety) početni kurs (U SAR-u): After turning my vessel 100 degrees from its initial course he was on my port quarter. It was dark, and shortly after making an initial course alteration to effect his chosen route, the master fell asleep. Assessing my own and the probable intentions of my two targets, I decided to stay on my initial course running over my waypoint.

initial operational capability (n) (navig, electr) početak rada (navigacijskog sustava)

Initial Position Error (n) (safety) greška u određivanju početne pozicije (potrage i spašavanja)

initial position error (X) The estimated probable error of the initial position(s) at the beginning of a drift interval. (IAMSAR/Camsar 2014)

initial report (n) (navig, comm) izvješće koje plovni objekt predaje službi VTS pri uplovljavanju u područje njezine nadležnosti početno izvješće: Wherever possible after the initial report, the master may delegate the task of filing reports to additional parties to a responsible agency or person.

initials /ˈɪnɪʃəlz/ (n) početna slova, inicijali

initial ship design (n) (nav arch) osnivanje broda

initial stability (n) (stabil) The stability of a ship in the range from 0° to 7°/10° of inclination

početna stabilnost: Although this ballast would have improved initial stability, the effect of the decreased freeboard would have also reduced the vessel’s righting lever.

initial transverse metacentre; (M) (n) (stabil) the point of intersection of successive lines of action of buoyancy force (f) when the ship is in the upright condition and subsequently heeled conditions (Rhodes, Ship’s Stability, Seamanship, 2003)

početni poprečni metacentar

initial transverse stability (n) (stabil) početna poprječna stabilnost

inject /ˈɪnˌdʒekt/ (v) (marine eng) ubrizgati: The electronically controlled Alpha Lubricator was developed to inject the oil into the cylinder directly on the piston ring pack at the exact time that the effect is optimal. Gas injection is stopped immediately on the first failure to inject the pilot oil by the patented safety valve incorporated in the control oil pump of the engine.

injection /ˈɪnˌdʒekʃən/ (n) injection valve 1 ventil za ubrizgavanje: The fuel injection valve is located in the centre of the cylinder head.; 2 fuel injection valve ventil za

ubrizgavanje goriva: The fuel injection valve is located in a valve sleeve in the centre of the cylinder head, its opening controlled by the fuel oil pressure and closure effected by the fuel oil pressure. (marine eng) ubrizgavanje, uštrcavanje injection pump pumpa za

ubrizgavanje: The fire was caused by fuel oil spraying from the main engine fuel injection pump where a threaded erosion plug had worked loose and blown out., injection pump drive pogon pumpa za ubrizgavanje: The new lower valve and injection pump drive design yielded greater
simplicity and eliminated the need for adjustments. **fuel injection pumpa goriva**, **fuel injection system** sustav za ubrizgavanje goriva: The HP part of the **fuel injection system**, with the functions of HP generation and accumulation as well as fuel metering, comprises the following:

**injection lag** (n) *(marine eng)* kašnjenje ubrizgavanja
**injection period** (n) *(marine eng)* trajanje ubrizgavanja (u stupnjevima okretanja koljenčastog vratila), period ubrizgavanja (u stupnjevima okretanja koljenčastog vratila): The time, measured in degrees of crankshaft rotation, between the beginning and end of injection (injection pump)

**injection pump** (n) *(marine eng)* A high-variable-pressure pump delivering fuel into the combustion chamber. (http://www.marinedieseleurope.com/) **pumpa ubrizgavanja goriva**: Valve-controlled **fuel injection pumps** are located at the height of the cylinder blocks. The cylinder liners are lubricated using **separate injection pumps** which use a different specification of oil.

**injection system** (n) *(marine eng)* uredaj za ubrizgavanje: The nozzle is the interface between the **injection system** and the combustion process: good nozzle performance is essential for good combustion. Two electrically driven pumps installed at the front end of the engine provide hydraulic power for the **injection system**.

**injection timing** (n) *(marine eng)* reguliranje vremena ubrizgavanja, faza ubrizgavanja, tempiranje ubrizgavanja: The cetane number or diesel index will determine injection timing and also influences the combustion noise and production of black smoke. **Fuel injection timing** can be freely adjusted independently of the injected quantity, Higher NOx emissions were neutralized by slightly delayed injection timing.

**injection valve** (n) *(marine eng)* ventil za ubrizgavanje: Each cylinder is individually served by a fuel injection pump, HP pipe and **injection valve** with uncooled nozzle. The pilot fuel system is a common rail (CR) system with one engine-mounted high-pressure pump supplying the pilot fuel to every **injection valve** at a constant pressure of 900 bar.

**injector** /ˈɪŋdʒektə/ (n) *(marine eng)* ubrizgač, raspršivač, rasprskac: The in-line six-cylinder model benefited from an upgraded fuel injection pump and a new **injector** as well as a new charge-air cooling system, which reduces the inlet air temperature by around 10°С... Further upward movement of the plunger causes the fuel to be raised in pressure and expelled through the delivery valve to the **injector**. **injector nozzle** mlaznica ubrizgača: The fuel flows at high velocity through small holes in the **injector nozzle** causing it to divide up into fine spray which penetrates throughout the combustion chamber. **injector needle valve** igličasti ventil ubrizgača: ... the injector has to snap open when the timed HP wave from the pump travelling along the HP pipe has reached the **injector needle valve**, **injector cam** brijeg ubrizgača (na bregastom vratilu / osovini), ekscentar za ubrizgač (na bregastom vratilu / osovini): The camshaft contains the exhaust valve cams as well as the unit **injector cams**, worn **injector**
**injector sleeve** (n) *marine eng* A tube that keeps engine coolant away from the injector.

**injunction** (n) *mar law* An order from a court that prevents someone from doing something

**injure** (n) *ozlijediti, povrijediti*: Fortunately, no one was injured. Na sreću nitko nije bio ozlijeđen. As a result of the sea state during the subsequent manoeuvres, several persons on board the tug were injured. The AB reported from the forecastle that the bosun was seriously injured. The ship suffered minor damage to her bow but nobody on board was seriously injured and there was no pollution.

**injured** (adj) *ozlijeđen, povrijedjen*: Immediately after berthing, the injured crew was sent ashore and the doctor diagnosed a bone fracture, ligament injury and subcutaneous haematoma.

**injury** (n) *safety* Ozljeda, povreda: Both vessels suffered major structural damage to their bows, but there were no injuries or pollution. - The CE was not wearing gloves, which could have reduced the severity of the injury. No injuries or pollution have been reported. Injuries: 4 Broj ozlijeđenih: osoba 4 fatal injury Smrtonosna ozljeda, fatalna ozljeda: A fatal injury to a crew member on a platform supply ship occurred while the ship was at anchor off the port, severe injury Ozbiljna ozljeda: The failure caused severe injury to a stevedore and gave rise to a lengthy off-hire period, suffer injury Ozljediti se, biti ozlijeđen, doživjeti ozljedu, zadobiti
ozljedu: We are very relieved that our crew are safe and have not suffered any serious injuries. escape injury izbjeći ozljedu, sustain injury zadobiti ozljedu, pretrpjeti ozljedu, ozljediti se: a serious injury sustained when falling overboard on 7 August 2005 Three seafarers sustained minor injuries but remained on board the vessel. The research reveals that injuries sustained while lifting or in slips, trips/falls are the most frequent incidents at sea, https://safety4sea.com/ Three port employees sustained injuries as a result of the accident., serious injury = serious injury ozbiljna ozljeda: Fortunately, despite being struck lightly by the pilot boat and scratched by the ship's hull, the pilot did not sustain any serious injury and was quickly rescued from the water by the pilot boat's crew. Wherever there is a serious injury, a “Mayday” call would be appropriate. Due to the serious injury, and under radio medical advice, the vessel deviated to the nearest port, from where the injured crewmember was flown to Singapore .., injury due to ozljeda uslijed, ozljeda zbog: Injury due to parted mooring rope., injury to (a person) ozljeda (osobe): Mooring line failure resulting in serious injury to a deck officer on board the ship ..., cause injury izazvati ozljedu, prouzročiti ozljedu: Sudden release of load caused injury Inappropriate use of disc grinder caused injury, fatal crush injury kobna ozljeda gnečenjem: As the vessel's bow moved away from the jetty, an AB who was standing inside the bight of the spring line suffered a fatal crush injury., burn injury opekлина: A crewmember sustained severe burn injury., scald injury ozljeda prženjem, opekлина, ofuriti se: The oiler had a large 2nd degree scald injury on his left ankle., hand / head / leg / eye injury ozljeda ruke / glave / noge / oka: A ship's crew member sustained a serious hand injury while using an air driven deck scaler during maintenance operations. The spreader and chain block fell on to the bottom plates violently, inflicting a head injury on a crew member. Ultra violet light caused eye injury. Whilst changing the ultra violet (UV) lamp in the ship's fresh water steriliser unit, a crewmember inadvertently switched on the UV light and stared, report an injury prijaviti ozljedu, izvijestiti o ozljedi: No injuries were reported and the cause of the fire is unknown. ink fish (n) (fishing) liganj inland (adj) 1 kopneni; 2 obalni, na kopnu; 3 u unutrašnjosti; 4 (navig) unutrašnji (plovni putovi) inland port luka unutrašnjih plovnih putova, unutrašnja luka: The two ships collided in dense fog in the Kiel Canal's inland port of Brunsbüttel., inland sea pilot pilot za unutrašnje plovne putove: Taking an Inland Sea pilot was not necessary but without hesitation I decided to take a pilot for berthing., inland vessel brod unutrašnjih plovnih putova: A new mate joined a small inland passenger vessel for his first day of work. The hatch crane and hatch arrangement are similar to those in many small ocean going and inland vessels.

inland carrier (n) (shipping econ) riječni prijevoznik, prijevoznik na unutarnjim plovnim putovima

Inland Container Depot (=ICD) a dry port based in the hinterland of a country (inland area of a country away from the coast or major rivers) and is equipped to handle full and empty containers (https://www.shippingandfreightresource.com/) pozadinski kontejnerski terminal, kontejnerski terminal u unutrašnjosti, suhi kontejnerski terminal: An ICD is recognised by customs and port authorities as an extension of the sea port and customs officials are present in many ICDs. https://www.shippingandfreightresource.com/

inland haulier (n) (logist) A transportation line that hauls export or import traffic between ports
Expanding intermodal service in South Carolina through Inland Port Dillon will create a competitive advantage for area businesses by lowering transportation costs and providing greater access to domestic and international markets.

An inland intermodal terminal directly connected by road or rail to a seaport and operating as a centre for the transshipment of sea cargo to inland destinations.

Inland Rules A specific set of maritime traffic laws applying to inland waterways is brought to the attention of all users. The vessel, a typical box/barge type capable of inland waterway transportation, was under the British flag and only a few years old. It will be Maersk's first container movement in the 1390-km inland waterway in the River Ganga from Haldia to Varanasi.

Closure of the inlet valve is timed so that just the right amount of air is sucked into the cylinders. The inlet valve closes 1° before bdc. The inlet valve is open and a fresh charge of air is being drawn or pushed into the cylinder by the turbocharger. Air inlet ventil za ulaz zraka, ventil za usis zraka, inlet pipe dovodni ventil.

The inlet pipe has to be replaced with a new one.

A fitting in a ship's hull to allow seawater to enter or exit. Usis mora (za hlađenje motora)

Here the inlet ports are machined around the liner about 1/3 of the way up from the bottom. The opening and closing of the exhaust and air inlet ports are shown diagrammatically in the typical timing diagram.
inlet vanes \((n)\) (marine eng) ulazne lopatice

in-line engine \((n)\) (marine eng) an engine in which all the cylinders are in a straight line

L-motor: ... a 320a 320mm mm bore/420bore/420mm mm stroke design which had been offered as stroke design which had been offered as an in-line engine with six, eight and nine cylinders or as V12 and V16 versions with an output of 370 kW/cylinder. As an option for particu-larly difficult applications, the in-line engine can be specified with control of the turbocharger turbine surface by MaK’s Variable Multi-Pulse (VMP) system.

in-line injection pump (=in-line injection fuel pump) \((n)\) (marine eng) An injection pump with a separate cylinder and plunger for each engine cylinder.

INMARSAT \((n)\) (comm, navig) a British satellite telecommunications company, offering global, mobile services. It provides telephone and data services to users worldwide, via portable or mobile terminals which communicate to ground stations through eleven geostationary telecommunications satellites.; A system of geostationary satellites for world-wide mobile communications services and which support the Global Maritime Distress and Safety System and other emergency communications systems.

Organizacija INMARSAT: Maintain the Inmarsat SafetyNET watch and disable the HF DSC watch until it has to be activated as the standby means of shore-ship alerting, should SafetyNET fail ... If the sole means of Distress Alerting in Sea Area A3 were INMARSAT-C, disregarding the use of an EPIRB, the number of False Distress Alerts/Relays would be significantly less. To look at it from another angle: Inmarsat-A, Inmarsat-B and Fleet 77 equipment is all allowed to be installed as part of a ship's GMDSS fit. So, if their Inmarsat-A happens to include a SafetyNET facility, they do not have to programme their 'A' to receive SafetyNET information in addition to their Inmarsat-C. A Satellite operated system that includes ship earth station terminals. GMDSS provides telex, telephone and data transfer services between ship-to-ship, ship to shore, and shore to ship along

sustava INMARSAT A, B i C: Inmarsat A, B or C distress and urgency alerts transmitted from a vessel are first detected by an Inmarsat land earth station (LES) and forwarded directly to its associated rescue coordination centre (RCC). CAMSAR II – Mission Coordination

ANTONYM ullage A measurement of liquid cargo in a tank. It is the distance from the top of the cargo to the bottom of the tank. It is the opposite of ullage. količina tekućeg tereta u tanku (mjerenia visinom tekućeg tereta)

inner anchorage \((n)\) (navig, ports) nutarnje sidrište, sidrište u zaštićenom dijelu luke: Our vessel was anchored in a crowded inner anchorage with a current of up to two knots.

**potvrda o cijepljenju**  
**inoperative** *(adj)* = pokvaren, koji ne radi / ne funkcionira: the vessel was moving astern and had an inoperative bow thruster Fog signal ... *(charted name of light / buoy)* in position ... inoperative. (IMO SMCP) Even if her radar had been inoperative, the bridge watch must have been very much at fault to mistake the lights and to have been in the deep water route. Simple failures render CO2 system inoperative. The ECDIS audible alarm was inoperative. The third accident involved a ro-ro vessel entering the same lock; this vessel was moving astern and had an inoperative bow thruster.  
**in order to** *(conj)* = s ciljem, kako bi *(pri izražavanju namjere): In order to allow a
wider clearance, the tanker reduced speed to dead slow. Simultaneously, his aspect was observed to change as he altered course to port and we quickly reversed the helm and steadied up back on 3100 T in order to allow him to pass round our stern. In order to allow a wider clearance, the tanker reduced speed to dead slow.

**in personam** *(Latin)* A type of legal proceedings directed against the defendant personally (e.g. an action for breach of contract, the commission of a tort or delict or the possession of property). Where an action in personam is successful, the judgment may be enforced against all of the defendant's assets, real and personal, moveable and immovable.

**in rem** *(Latin)* A type of legal proceedings, taken in an admiralty court in a common law jurisdiction, against the ship (and sometimes against cargo and/or freight) (the res) as defendant, in respect of particular types of maritime claims (e.g. to enforce a claim secured by a maritime lien or a statutory right in rem). The taking of an action in rem is generally accompanied by the arrest (supra) of the res, which provides pre-judgment security for the claim and confirms the admiralty court's in rem jurisdiction.

**LCL /ˈel si: el/ (=Less than container load) (n) (mar law, shipping econ)** COMPARE F.C.L. = less than container load Less than Container Load – this is when the same container is used for cargoes belonging to multiple shippers and consignees. The clients deliver their cargo to the lines packing station (CFS – Container Freight Station) and the line then packs the delivered cargo on behalf of the client. LCL is one of the Container Service Types in shipping. (https://www.shippingandfreightresource.com/); Less than Container Load refers to the freight forwarders shipping product where cargo from multiple customers is consolidated into one standard marine container. (https://www.transporteca.com/lcl-less-container-load/); Here the carrier takes the goods from two or more shippers, packs them into the container and seals it. http://www.mindsponge.com/American_History/reference/Tetley_admiralty/Tetley_2004.htm; Common term for an amount of goods to be shipped and which do not fill an entire container (http://www.maerskline.com/en-jm/help/shipping-glossary); Cargo failing to qualify for freight rates given to a standard shipping container due to insufficient quantity or weight. (http://www.lawdictionary.org/less-than-container-load-lcl/); Consignment of cargo, which is insufficient to fill a shipping container. It is grouped with other consignment for the same destination in a container at a container freight station. (http://www.lm amsterdam.de/); Consignment of cargo, which is insufficient to fill a shipping container. It is grouped with other consignment for the same destination in a container at a container freight station http://www.likemglobal.net/chartering_L.HTM; LCL (less than container load) is a mode of shipping via ocean. If you don’t have enough cargo to fill up an entire container, consider shipping LCL. (https://www.flexport.com/glossary/less-than-container-load/)

**zbirni kontejner (kontejner s robom koja glasi na više različitih primatelja)**: Ocean rates for LCL are commonly higher on a per-unit basis than for a full container load. Thus, consolidation of several **LCL loads** from different places or shippers into a full container can save on costs. **Less than Container Load (LCL)** is a service offered by freight forwarding companies, allowing shippers to book only part of a container. The smallest standard marine container carries a volume of 33 cubic metres or a weight of 28 tons – so an LCL service should be considered for any shipment considerably smaller than this. With an **LCL shipment**, you pay for your load to be shipped in a container with one or more loads from other customers of the freight transport provider. LCL lets you ship in smaller volumes so that you can keep your inventory lean. Instead of purchasing large quantities from suppliers, you can use LCL to keep a steady flow of inventory in smaller quantities. That frees up cash flow for other purchases. When an **FCL shipment** arrives at port, it’s unloaded from the vessel and delivered to the buyer. It’s more complicated for LCL: someone has to consolidate different shipments, process multiple documents per container, and then sort goods for each customer (https://www.flexport.com/learn/ship-by-lcl-or-fcl/)

**LCL consolidated by Consolidator (n) (logist, shipping econ)** **zbirni teret za kontejnere koji prikuplja konsolidacijsko skladište**: In the case of consolidation cargo, the **consolidators** issue their House Bills of Lading to the shippers and secure a Master Bill of Lading from the shipping line for the container which is booked with the line as an FCL and which will show them as a shipper on the lines bill of lading https://shippingandfreightresource.com/difference-between-lcl-and-consolidation/

**lee** /liː/ (n) **(meteorol, navig)** a downwind area of the sailboat/ship or on the side of it; an area sheltered from the wind **zavjetrina**: The pilot boat came on the **lee side**, because the prevailing 20 knot wind, sea conditions were fairly rough and cold. A deep sea fishing vessel’s main engine stopped at a critical moment after she had been sheltering from severe weather for almost 2 days in the lee of an island. Due to a deep depression producing severe gales, the **vessel remained within the lee** of the land for most of her voyage. **on the lee side, the lee of the breakwater zavjetrina lukobrana, u zavjetrini lukobrana, make a lee pruziti zavjetrinu**: Make a lee on your port side / starboard side. (IMO SMCP) The pilot boat was having difficulty coming alongside in the waves so the pilot, now on deck, requested the Master change course to 180° and then to 160° to make a lee., **provide a lee pruziti zavjetrinu**: ... the pilot boat became aware of the high speed on approach, and called the vessel to slow down and swing to starboard to provide a lee for boarding., **lee shore obala u zavjetrini**: The master chose to remain at anchor when gale force winds onto a lee shore were forecast., **create a lee pruziti (peljarskom brodu) zavjetrinu**: The master then turned his ship to create a sheltered area on the lee side to make it easier for the sea pilot to board. www.gov.uk/maib The Master turned the ship onto a heading of 089 degrees to create the lee for the pilotboat.

**leech** /liːʃ/ (n) **(sailing/boating/yachting)** the back edge of a sail; the aft or trailing edge of a fore-and-aft sail; the leeward edge of a spinnaker; a vertical edge of a square sail **stražnji rub jedra, stražnji porub jedra, ventana, ventam, Italian: balumina**: The sheet exerts a large downwards force on the leech of the sail when the boom is directly above it, much more than the kicker. The kicker controls leech tension and twist when the boom has passed to leeward of the traveller. A series of telltales along the leech of the main should flow evenly. Most boats benefit from a boom vang, which keeps tension on the mainsail’s leech. https://www.slideshare.net/galeforcesailing/sail-trim-and-balance-fundamental

**leech** (n) **(sailing/boating/yachting)** **stražnji rub floka / špinakera**: the trimmer set the jib to her normal setting and observed the jib leech telltale flowing 100 percent of the time.

**leech cord** (n) **(sailing/boating/yachting)** = **leech line ventam, konopac stražnjega poruba jedra, majolica**: The leech cord is really not a sail trim devise. It’s main purpose is to stop the leech from fluttering BUT it does have some sail trim advantages. The leech cord on a mainsail can also be used to fine-tune leech twist.

**leech line** (n) **(sailing/boating/yachting)** **konopac stražnjega poruba jedra,**
Tension on the leech line supports the edge of the sail to keep it from fluttering. Most new sails today come with leech lines built-in, particularly on larger sailboats.

Lee helm (n) (sailing/boating/yachting) ANTONYM weather helm list kormila više u zavjetrenoj strani; tendency of the boat with poorly trimmed sails to continually turn downwind on its own or if the helm is released skretanje kormilom od vjetra, bježanje od vjetra, zavjetreno kormilo, otpadanje, Italian: barra sottovento. Moving the sails' center of effort forward of the center of lateral resistance tips the scale in the other direction and forces the bow away from the wind, creating lee helm. If you experience lee helm in light air, shift crew weight to leeward to heel the boat and build weather helm.

Lee-Oh! (interj) (sailing/boating/yachting) uzzik pri zapovjedi za letanje (bordadu): Most crew sensibly take the view that lee-o-h means let go the genoa sheet, which upsets those skippers who shout lee-o-h at the start of the tack, and like to use the lift from the genoa generated by the rotation of the bow through the wind. The order Lee-o-h is given when the genoa starts to luff.

Leeer fish (n) (fishing) lica, lica bilizma

Lee shore (n) (sailing/boating/yachting) the land to the leeward of the vessel (wind blows from the ship to the land) https://officerofthewatch.com/tools/maritime-dictionary/vjetar s mora, obala prema kojoj puše vjetar: Be alert to navigational dangers and, where possible, keep well clear of a lee shore. The master chose to remain at anchor when gale force winds onto a lee shore were forecast.

Lee side ANTONYM weather side = windward side (meteorol) the side of a ship sheltered from the wind; The side of a ship that is towards the leeward is its lee side zavjetrina: We were sailing on the lee side of an island. The chief officer asked port control on which side the pilot ladder should be rigged, and was told “on the best lee side”. Hard-a-lee means pushing the tiller hard to the lee side When the vessel begins drifting (diagonally) leeward, water resistance is generated on the leeside of the bow.

Leeward /ˈliːwəd, ˈluːəd/ 1 (adj, adv) The direction away from the wind prema zavjetrini, u zavjetrini, koji se nalazi u zavjetrini: When the vessel begins drifting (diagonally) leeward, water resistance is generated on the leeside of the bow. Vessel’s sideways drift leeward of the desired course. on the leeward side u zavjetrini: The vessel was at 4.30 am on the leeward side of Groix Island to embark the pilot.

Leeward /ˈliːwəd, ˈluːəd/ (n, adv) (navig) ANTONYM windward zavjetrina: The sailing boat was hit by a particularly strong gust of wind which caused it to capsize to leeward. It was fortunate that the yacht grounded on a reef with safe water to leeward. The analysis conducted after the incident, using the ship’s manoeuvring and “rate of turn” data, revealed that the initial “wheel over” position was
too far to leeward, given the prevailing wind strength and direction. When the wind is pushing the ship’s stern away to leeward, the stern tends to swing towards the leeward leeward berth (n) (seamanship) vez u zavjetrini leeward side (n) (navig) zavjetrina leeway /ˈliːə/ (=LW) (adv, adj) 1 (navig) COMPARE drift the amount of drift motion to leeward of an object floating in the water caused by the component of the wind vector that is perpendicular to the object’s forward motion; Leeway is the motion of the object induced by wind (10 m reference height) and waves relative to the ambient current (between 0.3 and 1.0 m depth). (https://zenodo.org/record/797/files/12152.pdf); The movement of a search object through water caused by winds blowing against exposed surfaces. (IAMSAR/Camsar2014) zanos (u plovidbi, vožnji), zanošenje (u odnosu na željeni kurs): A navigator or pilot on a vessel must adjust the ordered course to compensate for the leeway drift We are making .... degrees leeway (IMO SMCP). This allowed the westerly wind, blowing across the channel from the left, to have a greater effect on leeway. Correcting the DR position for leeway, current effects, and steering error result in an estimated position (EP). (Bowditch) Leeway and current effects combine to produce the most pronounced natural dynamic effects on a transiting vessel. (sailing/boating/yachting) otpadanje (u jedrenju): Coming immediately onto their course of 160°, the combination of excessive leeway as the yacht was gathering way, and the onshore swell, quickly placed them in danger. Rough weather will increase leeway, because the boat will be carried sideways by breaking waves Bilge keel yachts (twin keels) make more leeway than fin keeled ones in the same conditions. http://www.sailtrain.co.uk/navigation/leeway.htm leeway divergence angle The average angle between an object’s direction of leeway and the downwind direction. (IAMSAR/Camsar2014) kut divergencije pri zanošenju: Leeway may diverge to either the right of the left of the downwind direction. Current evidence indicates that objects with significant leeway divergence angles rarely jibe or tack downwind. left-hand (adj) (seamanship, navig) lijevi left-hand side lijeva strana: A straight line joining the date on the left-hand side with the same date of the right-hand side represents a complete circle
around the sky, the two ends of the line representing the point 180° from, **left-hand bank** lijeva obala rijeke: Astern thrust was applied, but at the same time the wind caught the bow and the boat gently bumped into the **left-hand bank of the river**, **left-hand lay** (seamanship) lijevi suk konopa, uže sukano u lijevo

The most fundamental lesson from this incident is the need to ensure that there is no load on the system prior to conducting any maintenance work. The lessons learned from the official accident report:

Let us learn a lesson from this and have the crew only in the boat after it has been swung out and then they can use the release gear.

letter of guarantee (n) (mar law) A written undertaking, or letter of indemnity, usually provided by a bank, promising to hold the carrier harmless, up to a certain sum, for claims that may arise from the delivery of goods to a particular person who is unable to surrender the original bills of lading in return for the goods garantno pismo (pri dolasku broda), garancija, jamstvo: Guarantee letter is issued by the bank to the shipping company as a Bill of Lading: B/L for receiving products before Shipping Document’s arrival Letters of guarantee, reasonably worded, are a perfectly legitimate device to protect the carrier from claims if cargo is released without production of the original bill of lading. (http://www.fta.co.uk/policy_and_compliance/sea/long_guide/letters.html) Shippers should try to arrange delivery contracts in such a way that recourse to a letter of guarantee does not become necessary.

letter of indemnity /ˈɪndɪmənti/ (=LOI) (n) (mar law) A written undertaking by a shipper (infra) to indemnify a carrier for any liability which the carrier may incur for having issued a clean bill of lading when, in fact, the goods received were not as stated on the bill of lading. Such a letter is usually a central document in a fraud, whereby the shipper and carrier knowingly misrepresent to third parties the actual order and condition of the goods at the time of shipment or the bad order of the packing, or whereby they issue duplicate bills of lading to replace lost or stolen originals. Letters of indemnity should not be condoned by courts and are generally held ineffective as against third parties. http://www.mindserpent.com/American_History/reference/Tetley_admiralty/Tetley_2004.htm); isprava kojom se tražitelj obvezuje da će od brodovlasnika, njegove službenike i agente obeštetiti u odnosu na svaku odgovornost, gubitak, trošak ili oštećenje koji može nastati zbog provedbe njega

letter of indemnity
Letter of Indemnity: A letter of indemnity (LOI) is a document contractually obligating the shipper to take responsibility for any loss or damage resulting from a breach of contract (like the terms and conditions of a bill of lading). (https://www.flexport.com/glossary/letter-of-indemnity/) jamčevno pismo, garantno pismo: There is no p&i cover for misdelivery of cargo, so change of destination is usually the subject of a letter of indemnity ... In case of cargo being lost or delayed in transit, the shipping company will allow delivery of the goods to the person claiming to be the consignee, if he gives a letter of indemnity; this is normally countersigned by a bank, and relieves the shipping company of any liability should another person eventually come along with the actual bill of lading. When the owners instruct the master to accept a letter of indemnity (LOI), they will take steps to ensure that the wording of the LOI presented to the master is the same as that which they have proposed. Carriers who meet a shipper request to issue a clean bill of lading in spite of pre-shipment damage or to backdate a bill of lading to meet letter of credit terms sometimes require letters of indemnity. The master or owner, if they agree, may require a letter of indemnity from the shipper for the consequences of complying should it turn out that the named party is not entitled to take delivery of the goods. It should be noted that, as a rule, any such letter that seeks to indemnify against an act, which is intended to defraud an innocent third party, is unenforceable in a court of law. http://www.leewardcorp.com/es/ The master or owner, if they agree, may require a letter of indemnity from the shipper for the consequences of complying should it turn out that the named party is not entitled to take delivery of the goods. http://www.tkmglobal.net/chartering_L.HTM Flexport will require an LOI if the consignee is receiving cargo without the presentation of an endorsed original bill of lading; i.e. if the shipment is released with a telex release.

liquefied cargo: Cargo trimming is a mandatory requirement for some cargoes, especially where there is a risk of the cargo shifting or where liquefaction could take place. It is recommended the cargo in all holds be trimmed in an attempt to minimise the risk of cargo shift. Moisture related cargo failure mechanisms, widely known as liquefaction, continue to be a major concern for dry bulk shipping. Liquefaction can lead to cargo shift and even to the capsize and total loss of the ship, and can occur even when cargoes are cohesive and trimmed level. www.ukpandi.com; www.intercargo.org

A chemical tanker was at anchor where her tanks were to be prepared for loading a new cargo of 50% sodium hydroxide solution, also known as caustic soda. The master therefore informed all parties concerned and stopped the loading by closing the hatches. Berth No. 3 Northern Jetty was used by the ship for discharging and loading chemical products. The accident happened because deficiencies in the loading and securing of the deck containers were spotted but not rectified before the ship sailed. It is the duty of the Master to inform the pilot of any special conditions, difficulties, or peculiarities whatsoever pertaining to vessels which might impose hazards in connection with the handling, berthing, unberthing, loading or discharging of the vessel. The chief officer is responsible for the safe handling, loading, stowage and carriage, including the custody of the cargo throughout the voyage.

After loading commenced, moorings were regularly tended to by ship's staff. After completion of loading, a cargo surveyor boarded to take samples of the cargo. Any place where a ship can safely lie alongside a quay, pier or dock, at anchor or a buoy, and where she can carry out loading/discharge operations or embark and disembark passengers is called a berth (vez, pristan).

Prepare the vessel for loading / discharging. Cargo loading had stopped because the winds were gusting above the terminal’s safety limits.

A marine loading arm, also known as a mechanical loading arm, loading arm, or mla is a device consisting of articulated steel pipes that connect a tankship such as an oil tanker or chemical tanker to a cargo terminal; obalna dizalica s priključnom cijevi za krcanje nafte, zglobova ruka za krcanje tekućih tereta, mehanička ruka za ukrcaj/iskrcaj tekućih tereta, ruka za ukrcaj/iskrcaj tekućih tereta.

The use of loading arms, or articulated pipe systems, to replace hoses is becoming increasingly popular, especially on bottom loading or unloading operations. The loading arm and hose must be flanged oil-tight to the ship’s manifold so that oil spills can be avoided. Liquid cargo is nowadays usually transferred using an articulated arm loading/discharge systems, and groups of loading arms are often found on a shore refineries or on offshore loading facilities. The loading arm will be out of service for some time, resulting in financial consequences for the terminal; Mainly used in the oil and gas industry, loading arms and hoses are storage tank equipment commonly used to transfer fuel or liquid. Nowadays, a loading arm is recommended suitably for tanker loading and unloading, it is seen as the safe, fast and easy way of operation especially in the terminals.

All loading arms are chiksans with quick connector couplings. Loading arm coupling spojka mehaničke ruke, ship’s loading arm mehanička ruka za krcanje tekućih tereta, brodska dizalica za ukrcaj/iskrcaj nafte, terminal / shore loading arm obalna mehanička ruka, disconnect the loading arm isključiti spoj mehaničke ruke: The personnel from the shore have disconnected the loading arms.
The ship moved away from the loading berth and started rolling. Two pilots were called to sail the loaded vessel and shift the smaller vessel onto the same loading berth.

The ship’s loading computer was then used to check that the vessel was safe with the pump room flooded. In the loading computer, there is an ullage entry program where tank ullage tables, petroleum measurement tables are all interlinked with formulae. Ships were, at this stage, still supplied with loading computers that continued to calculate a ship’s stability, shear forces, bending and, occasionally, torsion moments. Many of these functions are available only if the tank / draught level gauges and the Ballast Control system is interfaced to the ShipLoad Loading Computer. https://www.km.kongsberg.com/ Damage stability calculation by loading computers. Do you comply with Resolution MEPC.248(66)? http://www.sateco.it/loadmaster

The loading programme should cover the order in which tanks are to be loaded/discharged, tank/pump/pipe work allocation and loading/discharge rates in order to minimise the stress on the vessel and the risk of cross-contamination of different grades of cargo.

Loading arms and hoses are storage tank equipment commonly used to transfer fuel or liquid. Loading hoses are hardwall, flexible, lightweight hose and can be worn in ATEX areas. 2. 2. Used for...

**loading instrument** (alternatively **loadicator**) (cargo handling, stabil) A loading instrument is an instrument, which is either analogue or digital, by means of which it can be easily and quickly ascertained that, at specified read-out points, the still water bending moments, shear forces, and the still water torsional moments and lateral loads, where applicable, in any load or ballast condition will not exceed the specified permissible values. (http://www.iacs.org.uk/document/public/Publications/Resolution_changes/PDF/UR_51_Rev7.pdf); a shipboard calculation tool which assists the ship’s cargo officer in: 1. Planning and controlling cargo and ballasting operations; 2. Rapidly calculating SWSF and SWBM for any load condition; 3. Identifying the imposed structural limits which are not to be exceeded. (http://marinegyaan.com/what-is-use-of-loadicator-or-loading-instruments-on-ships/); a shipboard instrument to calculate trims, drafts, etc.

**krcanje, loadicator**: The loading instrument may also be used to perform stability checks if it incorporates stability software. The loading instrument is to be checked for accuracy at regular intervals by the ship’s Master by applying test loading conditions.

**loading manual** (cargo handling, stabil) upute za krcanje (tereta), priručnik za krcanje (tereta): The ship’s approved loading manual provides a description of the operational loading conditions upon which the design of the hull structure has been based. **loading master** (cargo handling) the marine transfer operator at the marine terminal who supervises the movement of petroleum products between tanker ships, barges, and the terminal while the vessel is berthed at the dock (https://en.wikipedia.org/wiki>Loading_master) lučki nadzornik krcanja tereta / broda, lučki voditelj krcanja tereta / broda, nadzornik krcanja tereta / broda: Agent and Loading Master do not board before sailing, so no signatures are possible on 19 L or Letter of Protest. If inspectors or loading master are onboard at the time, get them to seal the samples, with an accurate description of the contents. Normally a loading master or the pilot remains on board, once the vessel is moored, to co-ordinate communications between ship and terminal, as well as assessing weather. A short time later, the loading master again asked if the vessel was ready to load but still the lines were not cooled to the correct temperature.

A ship may have aboard more than one *log*, including an official *log*, an engine room *log*, a radio *log*, a rough *log*, etc. The *log* is at time prima facie evidence in a maritime dispute [http://www.mindserpent.com/American_History/reference/Tetley_admiralty/Tetley_2004.htm](http://www.mindserpent.com/American_History/reference/Tetley_admiralty/Tetley_2004.htm)

dnevnik (brodski, palube itd.): It cannot be overemphasized that clear and properly annotated echograms and navigation *logs* are especially important in shoal reports. On very large ships, such as VLCCs, some guidance may be available from reliable *doppler logs*, but on many ships a *doppler log* is not available. Like time-delay measuring *logs*, *Doppler logs* can only track the seabed in relatively shallow waters. *Modern logs* use electronic sensors or spinning devices that induce small electric fields proportional to a vessel’s speed. **keep a log** voditi dnevnik, voditi brodski dnevnik:

**Kormilarskog uređaja, propelling machinery pogonski strojevi:** The main propelling machinery must be kept ready to move (standby) and there must always be available on board a sufficient number of crewmen to enable the ship to leave the berth, refrigerating machinery.

**Rashladni uređaj:** Such vessels operate on liner cargo and tramp services, and are provided with large insulated holds with refrigerating machinery to control the temperature of the cargo. These ships shall obtain a certificate from a class surveyor or other competent expert prior to loading, stating the condition and suitability of the refrigeration machinery and reefer compartments for the carriage of the specific cargo in question.

**Deck machinery palubni strojevi:** The size and shape of the deck machinery may vary depending upon type of vessel, but the operating principles remain the same.

**Steam machinery parno postrojenje, hydraulic machinery hidrauličko postrojenje:** Recommendation that the use of eye protection should be considered when operating hose handling cranes or other hydraulic machinery where flexible hoses and fittings may be exposed to the aggressive elements of the sea.

**Propulsion machinery pogonski stroj / strojevi:** Note: A machinery space is not limited to the engine room noting that spaces containing auxiliary propulsion machinery are also included in the definition in regulation 2 of SOLAS II-1. Every chief engineer officer and second engineer officer on a seagoing ship powered by main propulsion machinery of 3,000 kW propulsion power or more shall hold an appropriate certificate.

**Main machinery glavni pogonski stroj, glavni motor:** Although some power was immediately restored by the emergency generator, it took some time to get the main machinery restarted. While alongside during the morning watch, a “bang” was heard in the unmanned forward main machinery space of a 20,000gt ro-ro ferry.

**Manned machinery space strojarnica s časnicima i posadom u straži:** ... the container vessel proceeded on maneuvering speed and with manned machinery space towards One Fathom Bank.

**Operation of the machinery rad stroja, funkcioniranje strojarnice:** The Chief Engineer shall command and supervise the operation of machinery; in person; in the following cases at minimum when entering and leaving port and shifting in a port.

**Running machinery stroj u pogonu:** Specific in the precautions to be taken, including a risk assessment, isolation of potential risks such as running machinery or hazardous substances and using correct equipment and clothing.

**Prepare the machinery for (docking / berthing, loading etc.) pripremiti storj za (pristajanje / ukrcaj tereta itd.):** Approximately 1 hour before arrival at the loading area, the officer of the watch called the third engineer to prepare the machinery for loading.

**Steering machinery strojarnica kormilarskog uređaja:** Several oil leaks from steering machinery were noticed.

**Machinery breakdown (n) (marine eng) havarija stroja, kvar stroja:** When a machinery breakdown occurs in close proximity to navigational dangers and other vessels, its consequences could be catastrophic unless effective action is taken.

**Machinery control room (n) (marine eng) kontrolna kabina strojarnice, kontrolna prostorija strojarnice:** The engineer then went to the machinery control room to start the engine. To begin work, the engine was taken off load, declutched from its gearbox and stopped from the machinery control room (MCR).

**Machinery damage (n) (marine eng) oštećenje stroja, havarija stroja:** The likely

**magnesium (Mg)** *(chem)* magnezij

**magnetic bearing** *(navig)* an absolute bearing using magnetic north magnetski azimut: The ship’s bearing from shore on the reversed pelorus is the magnetic bearing of the shore position from the ship. Determine the range’s true bearing from a chart; then, convert this true bearing to the magnetic bearing by applying the variation listed on the chart.

**magnetic compass** *(navig)* an instrument employing a magnetized needle which aligns with the Earth's magnetic field and indicates magnetic north (http://www.seatalk.info/cgi-bin/nautical-marine-sailing-dictionary) magnetski kompas: This magnetism is the principal cause of deviation changes of a magnetic compass. The process of neutralizing the magnetic effects the vessel itself exerts on a magnetic compass is properly called COMPASS ADJUSTMENT, but the expression COMPASS COMPENSATION is often used for this process, too. A marine magnetic compass, usually of the inverted type, frequently installed in the master’s cabin for his convenience. After 1840, British Astronomer Royal Sir George Airy and later Lord Kelvin developed combinations of iron masses and small magnets to eliminate most magnetic compass error.
magnetic field (n) (sailing/boating/yachting, electr) magnetsko polje, magnetizirano polje: o An onboard magnetic field that is strong enough may deflect your compass and cause deviation. The strength of the field is proportional to current flow: 8 amps produce twice the deflection of 4. Boats and yachting

magnetic north (n) (navig) the direction towards the North Magnetic Pole; Horizontal direction expressed as angular distance from magnetic north. magnetski sjever: ..., a compass needle in line with the earth's magnetic field will not indicate true north, but magnetic north.
magnetic particle inspection (=MPI) (n) (electr, marine eng) podmorske magnetske čestice subsea pregleded podmorskih magnetskih čestica

magnetic variation (n) (navig) angular difference between magnetic north and true north, which alters year by year as the magnetic poles move magnetska varijacija: These values of magnetic variation may be found on Chart 42, on pilot charts, and, on the compass rose of navigational charts. On NOS charts, variation is to the nearest 15', updated at each new edition if over three years old. The current practice of DMAHTC is to give the magnetic variation to the nearest 1', but the magnetic information on new editions is only updated to conform with the latest five year epoch.
magnetron /ˈmeɪɡnətrɒn/ (n) (electr, navig) a high power microwave oscillator in which the potential energy of an electron cloud near the cathode is converted into r.f. energy in a series of cavity resonators magnetron (radara): After the power is turned on and the magnetron has warmed up, “ST-BY” (Stand-by) appears, indicating the radar is ready to transmit radar pulses

magnify /ˈmeɪɡnə fai/ (v) povećati: ... slight changes in air pressure cause the cell to expand or contract, while a system of levers magnifies and converts this motion to a reading on a gage or recorder. Furthermore, the fall hazard was magnified by the application of grease to areas of the hatch coaming that he would be walking over.
magnitude /ˈmeɪnʤətju/d/ (n) (navig) the apparent brightness of a star as measured against a standard brightness scale (http://www.seatalk.info/cgi-bin/nautical-marine-sailing-dictionary)
magnituda: All stars of magnitude 1.50 or brighter are popularly called “first magnitude” stars. Those between 1.51 and 2.50 are called “second magnitude” stars, ... Any quantity, such as a force, velocity, or acceleration, which has both magnitude and direction, as opposed to a SCALAR which has magnitude only. He can obtain the current’s magnitude from pilot charts or weather reports.

marine engineer officers are responsible for the maintenance and operation of a ship’s main propulsion machinery and auxiliary plant, including deck machinery, air conditioning plants, refrigeration plants and domestic and electrical services. A responsible marine engineer watch keeper has to fill the log book for his/her own watch period without fail, along with the signature of all watch keepers for their concerned watch. Depending on the type of ship and the operational circumstances, marine engineer officers will be required to keep watches in the ship’s engine room. As a marine engineer working on ships, you would be required to monitor the performance of turbochargers during the watch and carry out maintenance whenever required. The successful candidate may be awarded a diploma and will then be able to work on
ships as a qualified Marine Engineer class four. He has sailed on a number of ships serving as a marine engineer officer.

The primary function of any marine engineering plant is to convert the chemical energy of fuel into useful work and to employ that power for steering, lighting, ventilating, air conditioning, heating etc. "We’re pleased to provide scholarships to deserving midshipmen who demonstrate leadership in the field of marine engineering and who have built a greater understanding of clean air technologies. www.MaritimeProfessional.com He has an MSc in Marine Engineering and BSc in Naval Architecture. Chapter VII MARPOL is the most important single document concerned with preventing marine pollution. There has been a substantial reduction in marine pollution over the last 15 years, especially with regard to the amount of oil spilled into the sea, despite a massive increase in world sea borne trade. One of the most effective means of combating marine pollution is by educating and training the operating personnel. Shipping is the least environmentally damaging form of commercial transport and, compared with land based industry, is a comparatively minor contributor to marine pollution from human activities.

Marine radar (=ship radar) (n) (electr, navig) Marine radars are short range radars used for locating other ships and land in the area. Ship radar are used as Tracking ship devices as per COLREGS.

Navigacijski radar, brodski radar: The bright rotatable radial line on the display of a marine radar set, used for bearing determination. The development of commercial marine radar entered a new phase in the 1980s when raster-scan displays that were compliant with the IMO Performance Standards were introduced. The common wave length in a marine radar is: a) 3 and 10 cm b) 3 and 10m c) 600 m d) 500 kilocycles 4. The marine radar is classified under the x-band (10 GHz) or S-band (3GHz) frequencies. With the help of ship radar, accidents can be prevented at sea with the use of the various inherent functionalities of the radar (determining the CPA and the TCPA, EBL, VRM etc).

Maintenance of machineries has to be carried out regularly. Considering the ships situation, various tools, parts and materials are required to be always available onboard. Clear and good understanding of tools, parts and materials are beneficial to engineers for proper upkeep and inventory of tools.

8.1 Maintenance Tools

8.1.1 Hand Tools
a. Hand Spanner/Wrenches

There are different types of hand spanner and wrenches that are available in the workshop which could be selected depending on the type and condition of maintenance work to be done.

Example usage of hand spanner and wrenches:

i. Adjustable wrench is used as easy tool for undetermined size of bolt and nut when immediate tightening is required.
ii. Adjustable pipe wrench is suitable for fastening/loosening small sizes threaded pipes and damage head bolt in an awkward position.
iii. Slogging spanner is used for loosening and tightening big sizes of bolts using hammer.
iv. Instead of adjustable pipe wrench, hook spanner is used for threaded cap connection with teeth to avoid damaging the cap.
v. Offset spanners are used when working in an awkward position jobs.
vi. Square drive wrench is specially used for square bolts or handle.
vii. Torque wrenches are used for a specified torque controlled tightening of bolts and nuts.

This document and all IHO Pilot-related documents are available for download at: http://www.mpaha.org

http://www.pepilots.com/pilot_ladder.html, designated pilot boarding arrangements upute za
Navigation within the port encompassed the approach channel, the short-term anchorage and the pilot boarding area. Poor planning considerations caused the delay in weighing anchor, which in turn required a high speed approach to the pilot boarding area.

At 2245, the vessel arrived at the designated pilot boarding point.

At 2115 the vessel approached the pilot boarding station. ... the ship weighed anchor and proceeded to the pilot boarding station, where a little later, the port pilot boarded the vessel and went to the bridge. https://safety4sea.com The ship has two designated pilot boarding stations.

The designated pilot boarding station on board the vessel was in accord with IMO Resolutions A.667(16) and A1045(27). The designated pilot boarding station on the ship was not marked.

The vessel was making way at near nine knots in order to match the speed of the pilot boat and was sounding the prescribed fog signal. A pilot boat came alongside to pick up the pilot. A deckhand on board the pilot boat suffered serious injuries whilst the pilot boat was pulling away from alongside the container ship. On board the pilot boat were its coxswain, deckhand and the sea pilot.

The passing ship's wash might have caused the pilot boat to drop relative to the cargo ship just as the sea pilot was attempting to step across.

The Master and pilot on vessel A carried out a pilot briefing and the pilot had received a copy of the pilot card.

The pilot card, to be filled in by the master, is intended to provide information to the pilot on boarding the ship. This information should describe the current
condition of the ship, with regard to its loading, propulsion and manoeuvring equipment, and other relevant equipment. (see IMO Resolution A.601(15))

pilot hoist (n) (nav arch) The pilot hoist shall be designed to operate as a moving ladder to lift and lower one person on the side of the ship, or as a platform to lift and lower one or more persons on the side of the ship. It shall be of such design and construction as to ensure that the pilot can be embarked and
disembarked in a safe manner, including a safe access from the hoist to the deck and vice versa. Such access shall be gained directly by a platform securely guarded by handrails. **peljarsko vitlo, peljarsko dizalo, peljarski lift, dizalo za peljara:** A pilot boarding hoist is raised by a power winch. The mechanical pilot hoist should be designed to operate as a moving ladder, or as a platform, to lift and lower one person on the side of the ship. Case 1 deals with the failure of a pilot hoist and happened to a pilot disembarking from a high sided vessel on the UK coast shortly before midnight. A mechanical pilot hoist should be so located that it is within the parallel body length of the ship and, as far as is practicable, within the mid-ship half length of the ship. The starboard pilot hoist was used to lower the pilot to the waterline and it operated faultlessly.

The container ship was rolling and pitching heavily in rough seas. The boat’s bow pitched down and the man, realising that he was in danger of falling onto the boat, decided to fall backwards onto the pontoon. The vessel encountered heavy weather at Beaufort scale 9 which caused it to pitch and roll heavily. The OOW moved the starboard azipod control lever to pitch ahead but the ship remained stationary. The chief officer then applied full bow thrust to port and, on the master’s suggestion, applied astern pitch to the port propeller. His first reaction was to refloat the ship, so he put some astern pitch on the CPP. Some pitch prazan hod, pitch effect efekt koraka propelera, efekt prekretnog propelera ili azipoda.

(H. Baudu, p. 248) **točka okretišta broda:** The closer the pivot point is to the centre of the ship, the smaller the turning radius becomes.  
H. Baudu (2014), p. 248  
When turning while the ship makes headway the pivot point may be located approximately in the ship’s forward quarter.  
H. Baudu (2014), p. 254  
In the case where the ship is stopped, the pivot point merges with the centre of gravity at the middle of the ship. The position of the pivot point depends on a number of influences.  
With headway, the pivot point lies between 1/4 and 1/3 of the ship’s length from the bow, and with sternway, it lies a corresponding distance from the stern.

**quay crane** /ki/ (n) (cargo handling) obalna dizalica

**quay length** (n) (ports) dužina veza, dužina pristaništa: The quay length extends over 3 kilometres and has a maximum anchorage depth of 15 meters.  

**quay rent** (=quay money) (n) (logist) in addition to container hire, the shipping company often charges its clients compensation for use of a storage space at the terminal outside the free period. This is to ensure that the container is emptied and made available for reuse in the short term.

**quayside** (='ki:sard) (n) (ports) the dock or platform used to fasten vessels, usually running alongside the shore lučka obala

**queued ships** (=:kju:d) (n) (logist) brodovi na čekanju (za uplovljenje u luku): For the queued ships, the wait appears to range from several days to nearly two weeks

**quick lights** (n) (navig) lights exhibiting very rapid regular alternations of light and darkness, normally 60 flashes per minute kratka svjetla

**quick release device** (n) (seamanship) naprava za brzo otpuštanje (lanca, konopa)

**quick release hook** (n) (seamanship) (nav arch) kuka za brzo otpuštanje (lanca, konopa, brodice za spašavanje), brzootpusna kuka, samotpusna kuka: the ship was moored to quick release hooks on the mooring dolphins At this point, the hook released the tensioned breastline. The boat then started to lower and almost immediately stopped, at which point the quick release hook opened and the boat fell just under a metre into the water. quick release mooring

**racking** *(n) (nav arch)* When a ship is rolling, the accelerations on the ship’s structure are liable to cause distortion in the transverse direction. The deck tends to move laterally relative to the bottom structure, and the shell on one side to move vertically relative to the other side. This type of deformation is referred to as ‘Racking’. (https://cultofsea.com › Ship Construction); Deformation of the section of a ship, generally applied to a transverse section, so that one set of diagonals in the plane of action is shortened while those at right angles thereto are lengthened. (https://www.history.navy.mil/)

**poprečna distorzija (palube, trupa)**

**racking force** *(n) (cargo handling)* A result of the static and dynamic forces within the container parallel to the ship’s deck, causing damage to the container.

**sile izvijanja kontejnera u smjeru paralelnom s palubom broda:** Exceeding racking forces can be reduced by use of diagonal lashing units. In the pitching condition the racking force is acting in the container side frames.

**racon** /ˈreɪkən/ *(=RAdar beaCON) (n) (navig)* A radar beacon which produces a coded response or radar paint, when triggered by a radar signal; A racon is a radar transponder commonly used to mark maritime navigational hazards and other navigation features. **radarski far odgovarač**, **radarski far tip racon, rakon, radarski svjetionik:** The signal transmitted by the RACON appears intermittently on the display as a Morse character, a dashed or dotted line radiating out from the beacon. In the U.S., RACONs are used to mark lighthouses and buoys, inconspicuous coastlines, navigable spans under bridges, offshore structures such as oil platforms, or environmentally sensitive areas such as coral reefs. Racons are particularly useful for showing up objects which otherwise may be difficult to identify. **interrogation subsystem uredaj za odašiljanje signala, transponder subsystem uredaj za odziv, sensitivity time control automatska kontrola pojačanja prijamnika, automatic overload control sustav za automatsku kontrolu preopterećenja, slow sweep racon racon sa sporim pretraživanjem, fast sweep racon racon s brzim pretraživanjem, frequency agile racon racon s *podesivom* frekvencijom off-set racon s pomakom vremena, integrated time off-set racon upravljuvi racon s pomakom vremena**

radar horizon (n) (navig) radarski horizont: Due to refraction radar can see about 6%
radar interference (n) (navig) međuradarska smetnja (dvaju bliskih brodova), radarska interferencija: Mutual radar interference may occur in the vicinity of another shipborne radar operating in the same frequency band (9 GHz).

radar logbook (n) (navig) dnevnik radara: On the technical side, information recorded in the logbook includes: maintenance and repairs carried out, spares on board and their part numbers, technical and performance details and information concerning arcs of shadow and blind sectors. On the operational side, information recorded in the logbook includes: details of detection ranges for various types of targets and information concerning detection ranges of conspicuous objects.

radar marker (RAdarMARKer) /'reima:k/ (n) (navig) radarska oznaka

radar mast (n) (navig) radarski jarbol

radar navigation (n) (navig) Radar navigation uses radar to determine the distance from or bearing of objects whose position is known. This process is separate from radar’s use as a collision avoidance system. [Bowditch 2001] radarska navigacija: Radar navigation is similar to traditional navigation in that you have to identify landmarks, measure their position relative to your own and use those measurements to establish a position on the chart. Radar fixing is often quicker than taking bearings with a magnetic compass and is a more professional technique than simply transferring a latitude and longitude from the GPS.

radar noise (n) (navig) radarske smetnje, radarski šum

radar plotting (n) (navig) radarskom plotiranje, radarsko ucrtavanje: If a risk of collision is developing a radar plot should be started or the target captured by the Automatic Radar Plotting Aid (ARPA). inaccurate radar plotting netočno radarsko plotiranje

radar position fixing (n) (navig) određivanje pozicije putem radara

radar presentation (n) (navig) radarski prikaz, radarska prezentacija

radar pulse (n) (electr, navig) radarski impuls: When radar pulses are transmitted the radar receiver is automatically tuned.

radar (Radio Detecting and Ranging) radar

radar (radio detecting and ranging) radar

radar range (n) (navig) domet radara, radarska udaljenost: The range to a target may be measured three ways: with the fixed range rings, with the cursor (if set to measure range and bearing), and with the VRM. radar range rings kružnice udaljenosti, high / low radar range najveći / najmanji domet radara, determine radar range odrediti udaljenost objekta radaron: Radar determines the range to a target by measuring the amount of time required for a reflected echo to return to the scanner, switch the radar range between … and … (NM) prebaciti domet radara između

**radar rearch** *(n) (navig)* radarsko pretraživanje, traženje radarom

**radar receiver (RX) (=Rx) (n) (navig)* radarski prijamnik, radarski prijamnik, prijamnik radara

**radar receiver - technical specifications** radarski prijamnik - tehničke osobine
- Intermediate frequency (IF) (MHz) međufrekvencija, Short pulse kratki impuls, Medium/Long pulse srednji/dugi impuls, Noise figure (dB) šum prijamnika (dB)

**radar reflector** *(n) (navig)* radar reflectors are fitted to vessels or navigational buoys or other charted features to improve their reflective properties so as to make them visible to searching radar. A metal device designed for reflecting strong echoes of impinging radar signals towards their source.

(http://www.seasources.net/Radar_Terms.htm) **radarski reflektor**: The most common type of radar reflector is the octahedral reflector (8 corner reflectors). passive radar reflector pasivni radarski reflektor, active radar reflector aktivni radarski reflektor: There are two types of active radar reflectors or radar transponders which are used to assist the navigator to identify charted objects: racons and remarks.

**radar repeater** *(n) (navig) (=PPI repeater, remote PPI)* The equipment used for reproducing the information from a radar set at a remote point by means of a cable.

**radar resolution** *(n) (navig, electr)* radar's ability to distinctly display two radar targets which are close to each other. radarska razlučivost, rezolucija radara, radarska rezolucija

**radar scanner** *(n) (navig)* radarska antena: The scanner transmits the radio pulses and receives their reflected echoes. Most scanners rotate at a constant speed of 24 rpm. Many modern scanners rotate at variable speeds dependent upon the range in use in order to optimize radar detection.

**radar scanners - technical specifications** *(n) (navig, electr)* radarske antene - tehničke osobine
- Beamwidth (to –3 dB) (degrees) : horizontal / vertical širina snopa u stupnjevima na 3dB: vodoravno / okomito, Sidelobe attenuation (dB) slabljenje bočnih latica, Gain (dB) osjetljivost, dobitak/jačina,

The passenger cruise ship Saint Laurent has been safely refloated and removed from the Eisenhower Lock chamber in the Saint Lawrence Seaway following Thursday's allision with a bumper. The passenger cruise ship Saint Laurent was refloated in the early morning on Sunday and moved to deeper waters so as to be inspected for damages. A tug was promptly called and with the rising tide the vessel was quickly re-floated and properly berthed. About 5 minutes later, a third tug arrived. At 0103, with one tug pulling aft, the vessel’s engine driving astern and two tugs and the bow thrusters pushing to starboard, the vessel refloated on the rising tide. The vessel was re-floated 4 days later with tug assistance. The vessel remained aground with two tugs on scene attempting to refloat it. The ship was successfully refloated Monday afternoon after an effort involving several tugs and dredging.

ro-ro ship /便宜船 = roll-on/roll-off vessel ro-ro brod, brod za prijevoz cestovnih vozila: The vehicles in the ro-ro ship are loaded and unloaded by means of built-in ramps. For the shipper, the advantage of using a ro-ro ship is speed. Since cars and lorries can drive straight on to the ship at one port and then drive off at the other port within a few minutes of the ship docking, it saves a lot of time of the shipper. The ro-ro ship is different from lo-lo (lift on-lift off) ship that uses a crane to load the cargo. The new ro-ro vessels will have a length of 238 meters, a beam of 34 meters and a gross tonnage of 64,000 metric tons. Each will be able to transport more than 7,800 lane meters of
rolling units, equivalent to approximately 500 trailers.

Damen’s radical new ‘always bow first’ RSD Tug 2513 has reached the final stage of this year’s prestigious Maritime Award KNVTS Ship of the Year prize.

The innovative RSD tug design combines elements of tractor tugs and ASD tugs to create a new class of vessel that effectively has two bows, enabling it to always operate bow first. This makes it exceptionally efficient as it is equally effective at bow and stern assists.

This vessel has excellent seakeeping behaviour, superb manoeuvrability and outstanding towing characteristics. https://products.damen.com/en/ranges/rsd-tug/rsd-tug-2513

said to contain … (=STC) (prep phr) (mar law, logist) “1×20’ container Said To Contain 750 x 25 kg bags of Sugar”. Suppose the container reaches destination and the receiver opens the container to find there are only 700 bags instead of 750 bags as per example below, natural instinct would be to hold the shipping line responsible just because they carried the cargo. The cargo, the quantity and the weight inside the container are not known or verified by the shipping line (although the SOLAS VGM may be proof of the weight) because they are not involved in the packing of the container. Therefore the shipping line needs some protection against potential claims relating to shortage etc, so they clause the bill of lading with Said To Contain..

This is a caveat clause applied to container-shipment transport documents, indicating that the carrier has no firsthand knowledge of what was loaded in the container.

DuPont Marine Scrubber has ‘run-dry’ capability and no by-pass, allowing vessels that travel in and out of ECAs to comply with regulations: a single scrubber can meet 0.1% and 0.5% sulfur requirements. 

Maritime Reporter, March 2017; www.marinelink.com

Summarizing the situation with upcoming regulations he noted that to meet the requirement in 2016 and onwards in many areas, and you need to run on HFO you will have to use a SCR to remove the NOx and a scrubber to remove the sulfur. “Then you can go a little bit more expensive and burn light fuel. Then again you need after treatment with a SCR. Or you can go Marine Reporter NUMBER 7 / VOLUME 77 / JULY 2015, www.gcaptain.com

Scrubber Installs are Approaching 1,000 Ships Globally. www.gcaptian.com The owners have decided to install scrubbers on all of their newbuildings under construction across a number of shipyards. www.gcaptian.com Norway is also working on open loop scrubber bans around its world heritage fjords.

Most of the ships have adopted exhaust gas scrubber system to comply with the upcoming sulphur emission rule www.marineinsight.com

“A DuPont Marine exhaust gas scrubber enables any vessel to meet sulfur emission limits without switching to expensive low-sulfur fuel when entering an ECA. http://maritimeglobalnews.com/news/drive-scrubber-business-ckyyj8 "Residual fuel and scrubbers can be the most cost-effective and environmentally sustainable method of SOx compliance and EGCSA will use knowledge and data rather than rhetoric to answer questions and explain the benefits." http://maritimeglobalnews.com/news/drive-scrubber-business-ckyyj8 To comply with the regulation, ship owners can opt to burn more expensive low sulphur fuel oil, build or retrofit their vessels to LNG bunker fuel, or continue with heavy fuel oil using scrubbers. http://gcaptain.com Wärtsilä supplied open loop scrubber systems to Korean yard STX Offshore & Shipbuilding for four new 45,000 dwt Ro-Ro ships for It. owner Ignazio Messina & C. The vessels will burn residual fuel oil, and the scrubbers ensure that the 0.1% fuel sulphur content emission regulations can be met. http://gcaptain.com http://www.seanews.com.tr, install the scrubber ugraditi plinski pročistač, ugraditi scrubber: The shipowner now has commitments to install 20 scrubbers, including those going onto newbuild VLCCs Front Discovery and Front Defender. Many countries now (2020) prohibit the discharge of wash-water coming from open-loop scrubbers, scrubber malfunction... a severe scrubber malfunction caused thousands of gallons of sea water gush into the engine room. check the scrubber for leakage: It is imperative that the structural integrity of the scrubber and associated pipework is constantly checked for signs of leakage or corrosion. The basic operational concept of an SOx wet scrubber involves the mixing of water and sulphur from the exhaust gas. a corrosive environment within the scrubber tower and associated pipework can cause the risk of water flooding and escape of exhaust gas into the engine room. closed loop scrubber: Oman has banned the use of open-loop scrubbers in its territorial waters - this means that only closed-loop scrubbers, or hybrid scrubbers used in closed-loop mode, can be used. https://safety4sea.com/

sea bream (=seabream; sea-bream; sea bream) (n) 1 (fishing) = gilt-head bream English name for marine sparid fishes. The Sparidae family is also known as porgies. These fish have certain distinctive features that make them easily identifiable. First, their bodies are relatively flat. The line from the dorsal area to the front of the fish descends very rapidly giving the face a flattened appearance, especially when viewed in profile. Their color varies widely from species to species, mainly depending on water type and environment. In brackish waters, for example, the fish tend to be darker, with shades of blacks and grays to help them blend in with the environment. Some fish, in other areas, even have a bright red appearance, showing how diverse members of the family can be.

seaway bill (=Sea Way B/L) (n) (mar law) = waybill A seaway bill is a receipt of goods issued by the ocean carrier to the customer (also called the consignor or shipper). It is a contract by which the ocean carrier undertakes to transport the customer’s cargo in its vessel or vessels, from one point to the other. (https://www.marineinsight.com/maritime-law/what-is-seaway-bill-in-shipping); a type of bill of lading used for port-to-port or combined transport carriage

(http://www.maerskline.com/en-jm/help/shipping-glossary); Sea Waybills are not documents of title, so that the holder does not necessarily have ownership of the goods. Sea Waybills are increasingly used instead of Bills of Lading; they are simpler, which helps, e.g., when only short sea crossings are involved, or for regular shipments to established customers whose creditworthiness is not in doubt. Seaway bill takes the same form as B/L but is a non-negotiable receipt and not a document of title. Frequently used in the container trade. pomorski tereti list: A waybill is identical to a negotiable bill of lading except that it is not a document of title. There are no originals issued for this type of document. When a shipping document is issued to a “named” consignee and it is not a document of title, it may be considered as a “Sea Waybill“.. Sea Waybill of Lading is a NON-NEGOTIABLE & NON-TRANSFERABLE DOCUMENT.. https://shippingandfreightresource.com/cargox-blockchain-smart-bl-app/ When a shipping document is issued to a “named” consignee and it is not a document of title, it may be considered as a “Sea Waybill“.. https://shippingandfreightresource.com/cargox-blockchain-smart-bl-app/ The seaway bill is usually preferred by companies that deal directly with each other on a regular basis. A seaway bill will show a consignor and a single consignee who can receive the goods at the port of discharge.

https://www.marineinsight.com/maritime-law/what-is-seaway-bill-in-shipping A seaway bill is usually issued in triplicate – the original and second copies are given to the shipper or consignor, and the third to the consignee https://www.marineinsight.com/

The sighting of oil near the reef is of environmental concern because the world heritage site is the largest ecosystem of its kind, hosting over 1,500 species of fish, 400 of coral and 4,000 mollusks.

For signaling equipment, the more diverse your distress signaling ability, the greater your chance of rescue. Flares, flashlight, and mirrors are a must but more technological options like EPIRBs, 406MHz Personal Locator Beacons (PLB), a portable satellite phone, a cost-effective, 121.5MHz handheld, aviation VHF transceiver for contacting planes overhead and a handheld VHF should all be seriously considered. The traditional paper-based Bill of Lading is being replaced with a fast, safe, and reliable digital equivalent, namely the CargoX Smart B/L™ which is the industry’s first blockchain based smart bill of lading.

Using this technology (smart containers), whether you are a shipping line, customer or security agency, you can track the progress of your containers anywhere in the world, plan your equipment and stock inventory which could possibly lead to reduced costs. Everyone will operate much more effectively with smart containers: from the shippers themselves to ports, terminals, insurance companies, customs, and homeland security.

A smart port is an automated port that uses nascent technologies such as big data, Internet of Things (IoT), blockchain solutions and other smart technology. The smart port of tomorrow that wants to engage trade with China is going to need an integrated and seamless technology base that will allow movement of product and containers from vessel to port to land based transport. The aim of this model is to reduce the total cost of the supply chain through optimal asset utilisation, lower inventory costs through efficient cargo management and visibility of the entire value chain from manufacture to end user.

China’s first “smart” ship embedded with a domestically-developed intelligent navigation system made its debut in Shanghai. The smart ship is installed with SOMS, a China-Developed marine system with autonomous learning ability and intelligent operation system. It can analyze real-time navigation and meteorological data, pick the best routes and alert the crew to hidden dangers in advance.

stability change (=change in stability) (n) (stabil, nav arch) promjena stabiliteta broda: The metacentric height of the ship changes due to flooding. This can be explained by the general expression of metacentric height: \( GM = KB + BM - KG \). The explanation of reduction in stability can be done in two ways, which is exactly what we will study in this article, but at a later stage. For now, it should suffice to understand that when a ship is flooded, it results in a change of KB and BM values. The KB rises due to flooding, and it may rise further due to change in the ship’s trim. However, there is a significant reduction in BM, which is a function of the area moment of the ship’s water plane. Why? We will look into that when we study the Lost Buoyancy Analysis. https://www.marineinsight.com/ naval-architecture/ship-stability-damaged-stability-ships/

port. (https://people.hofstra.edu/geotrans/eng/ch4en/conc4en/tbl_public_prive_roles_ports.html); Represents the most common management model where infrastructure, particularly terminals, are
leased to private operating companies with the port authority retaining ownership of the land. The most
common form of lease is a concession agreement where a private company is granted a long term lease
in exchange of a rent that is commonly a function of the size of the facility as well as the investment
required to build, renovate or expand the terminal. The private operator is also responsible to provide
terminal equipment so that operating standards are maintained.

Each transportation mode has its own requirements and features, and is adapted to serve the specific demands of freight and passenger traffic. This gives rise to marked differences in the ways the modes are deployed and utilized in different parts of the world. More recently, there is a trend towards integrating the modes through intermodality and linking the modes ever more closely into production and distribution activities. At the same time, however, passenger and freight activity is becoming increasingly separated across most modes.

During a short sea passage on a twin-engined ship, a motorman was cleaning around the turbo blower of one of the main engines. Turbochargers of Marine Engines are important part of the system as they utilise the waste heat of the exhaust in order to supply charge air for scavenging of the engine. The equipment consists of turbine and blower attached on the same shaft.

If the blower side cleaning is not carried out properly, then the supply of air to engine will be reduced, resulting in lack of air and improper combustion with black smoke. The Blower side of turbocharger is cleaned by fresh water. The engine is run at its full load rpm to achieve best possible

Some Turning Basics

- **Turning Circle**: A ship's turning circle is the path followed by the ship's pivot point when making a 360-degree turn.
- **Advance**: Advance is the amount of distance run on the original course until the ship steadies on the new course. Advance is measured from the point where the rudder is first put over.
- **Transfer**: Transfer is the amount of distance gained towards the new course (shown here for 90° heading change).
- **Tactical Diameter**: Tactical diameter is the distance gained to the left or right of the original course after a turn of 180° is completed.
- **Final Diameter**: Final diameter is the distance perpendicular to the original course measured from the 180° point through 360° (shown here for steady turning radius, R).
- **Pivot Point**: A ship's pivot point is a point on the centerline about which the ship turns when the rudder is put over.
- **Drift Angle**: Drift angle is an angle at any point on the turning circle between the intersection of the tangent at that point and the ship's keel line.

Vessel traffic planning (navig, safety) planiranje plovidbe, planiranje prometa u plovidbenom području

Vessel Traffic Service (=VTS; vessel traffic services) (n) (navig, safety) Vessel traffic services deal with managing ship traffic on marine routes, suggesting best routes for a vessel and ensuring no two vessels run into each other on congested routes.

Vessel traffic services - VTS - are shore-side systems which range from the provision of simple information messages to ships, such as position of other traffic or meteorological hazard warnings, to extensive management of traffic within a port or waterway.

About 30 seconds before the collision Vessel Traffic Services (VTS) intervened to warn both vessels that they were running into danger but no response was received. The most commonly used sensing components of vessel traffic services are: 1. Radar system; 2. AIS; 3. Radio direction finder The purpose of a Vessel Traffic Service (VTS) is to provide active monitoring and navigational advice for vessels in particularly confined and busy waterways. There are two main types of VTS, surveilled and non-surveilled. Surveilled systems consist of one or more land-based sensors (i.e. radar, AIS and closed circuit television sites), which output their signals to a central location where operators monitor and manage vessel traffic movement. Non-surveilled systems consist of one or more reporting points at which ships are required to report their identity, course, speed, and other data to the monitoring authority.

Systems facilitating safe and efficient vessel traffic movement to or from ports, or within restricted sea areas adjacent to the coasts of states, under which ship traffic is subject to the supply or exchange of information, or the giving of advice or instructions, by coastal stations. On November 27, 1997, the International Maritime Organization (IMO) adopted Resolution A.857(20), entitled Guidelines for Vessel Traffic Services. That Resolution defines a V.T.S. as a service implemented by a Competent Authority, designed to improve the safety and efficiency of vessel traffic and to protect the environment. The service should have the capability to interact with the traffic and to respond to traffic situations developing in the V.T.S. area.

The vessel passed to Busan VTS limit with her course 356 degrees and her speed 11.5 knots, and reported to the VTS center and then was instructed by VTS to drop anchor at N-4 anchorage upon arrival. When a VTS authority organizes and manages traffic within its VTS area as part of its function, then it would normally also declare the provision of a Traffic Organisation Service (TOS). As a minimum, a vessel navigating within a VTS area should contact the operator, alerting them of their presence.

Both vessels complied with VTS orders and anchored in a designated area for investigations by port authorities.

A waybill is a non-negotiable receipt issued after receipt of the goods by the carrier. It is clearly marked non-negotiable. It is usually employed in the container trade for normal shipments with consent of the shipper who does not insist on being issued a negotiable bill of lading. It is not a document of title, so that delivery of the goods shipped is made, not by presentation of a document, but by the consignee nominated on the waybill identifying himself. Only one original waybill is usually issued to the shipper. Although it is not a document of title, it is a contract of carriage.

Sea Waybill is also referred to as a sea waybill or an ocean waybill or simply waybill.

**Worldscale** (=WS) (n) *(shipping econ, mar law)* An international index of freight for tankers. Worldscale is a schedule of freight rates for a standard ship in US dollars per tonne of oil for an array of oil routes. The rates listed in the table are designated as Worldscale Flat or WS100 and are revised annually. (http://www.clarksons.com/glossary/); Worldscale is a nominal worldwide tanker scale used to establish payment of freight services; Nominal freight scale applying to the carriage of oil and oil products in bulk by sea. An international freight index for tankers that provides a method of calculating the freight applicable to transporting oil by reference to a Standard Vessel on a round trip voyage from one or several load ports to one or several discharge ports. (www.worldscale.co.uk) međunarodni indeks tankerskih vozara, međunarodna tablica tankerskih vozara, Worldscale: The flat rate point 100 is effectively the breakeven point in accordance with the basis of calculation for the Worldscale Standard vessel but not for any other size. Worldscale includes expenses associated with ports, transit fees, port and voyage time and vessel bunker costs assessed in relation to the Worldscale Standard Vessel basis of calculation in order to produce a comparative nominal freight scale.
Worldscale rates are based upon a 75,000 tonne total capacity vessel performing a round voyage and expressed in dollars per tonne of cargo. Any new Worldscale rate request will require mileage calculations, any voyage costs and port cost information. Rate calculations may involve several different route options to determine the cheapest. The final rate agreed will be determined as a percentage of the ‘Worldscale’ rate, based upon a guaranteed minimum quantity of cargo. This allows for charter parties to cover a wide range of possible voyage options without the need to calculate and negotiate each one separately.

World–wide Navigational Warning Sevice (WWNWS) is to provide a coordinated voice for the liner shipping industry. The WSC and its member companies partner with governments and other stakeholders to collaborate on actionable solutions for some of the world’s most challenging transportation problems.

Worldwide Radio Navigation System (WWRNS) is a tanker chartering tool, its principle is to provide the ship-owner with the same net return per day irrespective of voyage performed for the Worldscale Standard Vessel at WS100. Worldscale is used to calculate freight rates for oil tankers and product carriers.

Worldscale

Svjetsko vijeće linijskih brodara: According to a recent report by the World Shipping Council, on average a total of 1.382 containers lost at sea every year. World Shipping Council members operate approximately 90 percent of the global liner ship capacity, providing approximately 400 regularly scheduled services linking the continents of the world.
