The economic attraction of the main engine-driven generator for electrical power supplies at sea is that it exploits the high thermal efficiency, low specific fuel consumption and low grade fuel-burning. The electrical power is supplied from the generators to the main switchboard from where it is distributed to all parts of the ship through numerous breakers and relays. There are normally three generators, one running and supplying power, one on standby, and one down for maintenance whilst at sea. GNSS (Global Navigation Safety System) is a constellation of satellites providing signals from space that transmit positioning and timing data to GNSS receivers. The receivers then use this data to determine location. The network, consisting of currently 31 active satellites (75 satellites have been placed so far), operates on 1575.42 MHz (in the civilian range) and provides an accuracy of a few meters. Each satellite continuously transmits its data and position determination is possible via a sound time calculation of at least 3 satellites.

Examples of GNSS include Europe’s Galileo, the USA’s NAVSTAR Global Positioning System (GPS), Russia’s Global’naya Navigatsionnaya Sputnikovaya Sistema (GLONASS) and China’s BeiDou Navigation Satellite System. GNSS provides global coverage.

GNSS receiver

GNSS Receivers are the core product for satellite positioning. They convert signals from visible satellites into a position on earth. The amount of visible satellites is dependent on the number of constellations the receiver is compatible with, such as GPS, Glonass, Galileo and Beidou. (https://geo-matching.com/gnss-receivers); GNSS receivers determine the user position, velocity, and precise time (PVT) by processing the signals broadcasted by satellites. Because the satellites are always in motion, the receiver has to continuously acquire and track the signals from the satellites in view, in order to compute an uninterrupted solution, as desired in most applications. Any navigation solution provided by a GNSS receiver is based on the computation of its distance to a set of satellites, by means of extracting the propagation time of the incoming signals travelling through space at the speed of light, according to the satellite and receiver local clocks. This time difference is transformed into a fake range, the “pseudorange”, by multiplying it by the speed of the light in the vacuum, \( R=c\times dt \). The pseudorange might be seen as a very rough estimate of the true range between satellite and user, and

has to be corrected to account for a number of phenomena before it can be interpreted as a precise measurement of the true distance.

(https://gssc.esa.int/navipedia/index.php/GNSS_Receivers_General_Introduction) **GNSS prijamnik, GNSS prijemnik**: GNSS receivers have prior knowledge of each satellite's PRN code (e.g. through the relevant SIS ICD), and correlate the incoming signals with local code replicas, to determine if a given satellite is visible or not.

All I want to do in my future life was to go to sea. All of us who go to sea as a profession, have confidence in our boats, and do not want to think about the unthinkable. This is very worrying to the people who have to maintain and go to sea in the vessel. Experience can only be gained by going to sea, watching, listening and learning, and building up a 'database' from which we can draw when things start going wrong or ... He first went to sea in 1968 with .... Lines until obtaining masters in 1975.

Under the SOLAS V regulations, passage planning is a legal requirement for all craft that 'go to sea'. Going to sea alone, on any type of boat, presents its own hazards and challenges.

Legislation governing the design and use of watertight doors should be flexible enough to achieve appropriate procedures for the use of any watertight door in any mode. Maritime law governs many of the insurance claims relating to ships and cargo, civil matters between shipowners, seamen and passengers, and piracy.

Fortunately, the vessel had grounded very shortly after low water, and, as the tide rose, she refloated without tug assistance after about 3 hours. At 04:13 the vessel grounded on the seabed with the engine at full speed. Vessel grounds in fair weather, no significant damage and refloats on next tide. No injuries, no (or very minor) pollution, no impact on port operations. The very large ore carrier (VLOC) grounded off Ponta da Madiera.

The car carrier was intentionally grounded on the Bramble Bank after developing a severe list. The ship was intentionally grounded and broken up off the east coast.

The Transportation Safety Board of Canada (TSB) says it has deployed a team of investigators to determine the circumstances of the grounding. Following the Monday’s grounding, the vessel was refloated and anchored in the vicinity. At this point, the OOW did not yet realise that the radar plot indicated a large stationary target right in the middle of the eastbound lane. U.S. Coast Guard has established a 500 yard safety zone around the grounded vessel in the vicinity of buoy number 3. Later, the passengers were evacuated from the grounded vessel to her sister vessel and were returned safely to the harbour. We approached the One Fathom Bank beacons via the recommended southern side of the traffic separation scheme in visibility at times less than 500 metres in heavy rain. As mistakes in providing the figure can be made and cargo can be wetted by heavy rain whilst stored in the open or during loading, the moisture content of the cargo should be monitored.

High cube containers (HC container; high cube) are similar in structure to standard containers, but taller. In contrast to standard containers, which have a maximum height of 2591 mm (8'6), high-cube containers are 2896 mm, or 9'6, tall. High-cube containers are for the most part 40' long, but are sometimes made as 45' containers. The superstructure of High Cube (HC) containers is approximately 30 cm higher than that of standard 40Ft GP containers, making it possible to load higher elements and/or more goods. The hoses are connected to the tanker, which discharges the cargo to the buoy and then to an undersea pipeline that runs ashore, and connects directly to the refineries by other pipelines. Heavy hoses, laying on the floor, are a trip hazard; not to mention they can be easily damaged, tangled, twisted, confusing and dripping residue liquids. The hose was connected to the starboard aft manifold on the main deck and a hanging off strop was used on the crash rail above. Cargo hose saving žive cijev za iskrcaj/ukrcaj nafte (i drugih tekućih tereta), maniga, ukrcajna / iskrcajna cijev za naftu (i druge tekuće terete): The duty officer had not checked that the ABs had blanked the manifold after the cargo hose had been disconnected, which, although not a checklist item, was a company operating procedure.

Disconnect the hose otpožiti cijev, otpožiti obalnu manigu: Shore party reboarded vessel and managed to disconnect cargo hose and lower it to the water.

Hose-handling crane dizalica za rukovanje ukrcajnim / iskrcajnim cijevima: The use of eye protection should be considered when operating hose handling cranes or other hydraulic machinery where flexible hoses and fittings may be exposed to the aggressive elements of the sea. Hose connection spoj cijevi: One of the hose connections became jammed and a second member climbed out of the tank to assist. The hose connection routine was then started by picking up the hoses from the mother vessel.

Hose derrick samarica za ukrcajnu / iskrcajnu cijev (za naftu, tekuće terete): Routine maintenance was being carried out on a cargo hose derrick. The hose parted cijev je pukla: While the caustic soda was being pumped out, the hose parted from the pressure side of the pump, spattering one crew member with the caustic solution.

Hose party grupa za rukovanje cijevi za ukrcaj / iskrcaj (nafte, tekućih tereta): After about 20 minutes, as the contents of the cylinders were exhausted, the fire began to die out and the hose parties were finally able to enter the burnt out gas storage room and put out the remaining fires, now confined to the control valves of a few cylinders.

With the hose partially disconnected in the engine room, the base oil remaining in the hose flowed out under gravity and splashed over the running engine. The fire continued to be fed by more fuel from the leaking hose. The ship’s staff requested the terminal to replace the leaking hose, which took place within next two hours.

Root cause/contributory factors: Worn and insufficient threads on the water hose coupling.

No abnormal manifold pressures were noted at any time prior to or at the time of the hose failure. The consequence in this case was that diesel fuel oil was supplied to the fire as the auxiliary engine’s flexible hose melted.

A steam hose was inserted into the tank, steam pressure was increased and a cargo pump was started to remove any water collecting in the tank.

A CO2 extinguisher was used initially, followed by a fire hose reel system to quench the fire and cool the surrounding area.

This was followed by a water jet from a charged fire hose and the fire was soon extinguished.

The hoses to hydrant in … are worn.

A humanitarian incident occurs if a life-threatening emergency is not related to an aeronautical or maritime SAR incident... SAR units (SRUs) may be tasked for humanitarian incidents to preserve human live or relieve suffering. CAMSAR II – Mission Coordination

Human performance is a series of behaviors executed to accomplish specific results. Performance is typically the outcome of results (what people do) plus behavior (how they do what they do). (https://safety4sea.com/)

Hurricane Joaquin, a severe tropical cyclone with sustained winds over 64 knots; usually referred to as 'hurricanes' in the Atlantic Ocean, Caribbean Sea, Gulf of Mexico and Eastern North Pacific, 'cyclones' in the Indian Ocean, and 'typhoons' in Western North Pacific. Hurricane Season begins on June 1 and ends on November 30, but these powerful storms can occur before and after the official season. Effect of recent hurricanes: navigational warnings about changes to channel depths and unreliable buoys not taken into consideration in the passage plan; What is the latest tropical storm warning? 4.1 The latest tropical storm warning is as follows: Tropical storm warning at 00:00 UTC. Hurricane... (name) / tropical cyclone / tornado / willy_willy / typhoon... (name) with central pressure of... millibars / hectopascals located in position. (IMO SMCP) Hurricane Dorian which caused widespread devastation across the Bahamas. The cargo ship went missing after sailing into the path of Hurricane Joaquin as it sailed from Florida to Puerto Rico. Hurricane is gaining strength once again gaining strength with max winds now at 120 knots (about 140 mph). Hurricane winds: It is difficult for me to understand why I could not use the bay for shelter and had to struggle against huge waves and hurricane winds in the open seas instead of getting protection from shore line against the storm. Hurricane update najnovije informacije o uraganu: The cargo ship went missing after sailing into the path of Hurricane Joaquin as it sailed from Florida to Puerto Rico.
The Ocean Prediction Center said in an update posted to Facebook, a Hurricane Force Wind Warning was issued. The latest NWS North Atlantic High Seas Forecast showed a Hurricane Force Wind Warning is in effect for the area with seas forecasted to build to 60 feet, or more than 18 meters, over the next 24 hours! **Hurricane Scale** (equivalent to Hurricane Categories)

The Saffir-Simpson Hurricane Wind Scale is a 1 to 5 rating based only on a hurricane’s maximum sustained wind speed:

- **Hurricane Category 1**: minimal damage
- **Hurricane Category 2**: moderate damage
- **Hurricane Category 3**: extensive damage
- **Hurricane Category 4**: extreme damage
- **Hurricane Category 5**: catastrophic

**Husbandry** /ˈhʌzbændri/ (n) 1 (Mar Law) **Compare ship's husband**

Agent services provided to a ship in the port, for requisite repairs, attending to the management, equipment, and other concerns of the ship; A ship's husband is usually authorized to act as the general agent of the owners, in relation to the ship in her home port.; management of affairs and resources. [https://www.collinsdictionary.com/dictionary/english/husbandry]

A term used by steamship lines, agents, or port captains who are appointed to handle all matters in assisting the master of the vessel - while in port - to obtain such services as bunkering, fresh water, food and supplies, payroll for the crew, doctors' appointments and ship repair. [https://www.msc.com/shipping-glossary]

**Husbandry** opći agencijski poslovi za brod u luci (za popravke, opremu itd.): Our ship husbandry services include inspections, repairs, hull cleaning, and propeller polishing. **Good husbandry** is always to be encouraged, and in this case the skipper wasted no time instructing the crew member to thoroughly clean out and wash down the accommodation area. **Ship's husbandry** opći agencijski poslovi za brod u luci: Corporation provides consulting and commercial diving services for all facets of ship’s husbandry (the inspection, maintenance, and repair of underwater hull and hull appendages of waterborne ships, submarines, tugboats, and other watercraft). Typical services include: Emergency
blank, plug, and cofferdam installation, Rudder removal and installation, Habitat installation Screw removal and installation Underwater inspections including video and still photography Bow thruster removal and installation Stern tube wraps removal and installation Un-fouling of vessels’ running gear

husbandry agent (n) (mar law, shipping econ) = protecting agent This is the agent appointed by the shipowners to attend only to those non-cargo matters - specifically those matters concerning vessel crew, repairs, supplies, and provisioning and classification society surveys.

hybrid boat /'haibrid/ (n) (marine eng, nav arch) brodica s hibridnim pogonom

hybrid power (n) (marine eng, nav arch) hibridni pogon, višestruk pogon, viševrsni pogon: The vessels will be equipped with hybrid power, with giant lithium batteries which will generate 100% of the electricity needed while in port. http://gCaptain The technology group Wärtsilä has completed the installation and commissioning of a unique hybrid power system combined with a PV solar energy system https://gcaptain.com/

hybrid propulsion (n) (marine eng) hibridni poriv, hibrini pogon: The CBO Flamengo will be fitted with a battery pack for hybrid propulsion, importing the vessel’s energy
consumption and reducing its cargo footprint. https://gcaptain.com/

**Hybrid Propulsion Plant** (n) (marine eng) hibridno pogonsko postrojenje

**hydrant** /ˈhaɪdrənt/ (n) (nav arch) hidrant hydrant outlet priključak hidranta: A system of hydrant outlets, each with an isolating valve, is located around the ship and hoses with the appropriate snap-in connectors are strategically located ... Moreover, all the hydrant outlets are provided with an isolating valve so as to isolate those valves which are not in use.

**hydraulic** /haiˈdrəlik/ (adj) (marine eng) hidraulični, hidraulički hydraulic machinery hidraulički strojevi, hidraulično postrojenje, hydraulic system hidraulički sustav: Return lines are not designed to take high pressure in most hydraulic systems. Before arrival in extreme cold conditions, hydraulic systems should be carefully inspected, system oil confirmed to be at optimum levels, and condition and oil filter elements renewed or cleaned, hydraulic pressure tlak hidrauličnog ulja: Before arrival in extreme cold conditions, hydraulic systems should be carefully inspected, system oil confirmed to be at optimum levels, and condition and oil filter elements renewed or cleaned. The third engineer raised the alarm and the ETO was eventually freed after the hydraulic pressure on the watertight door was released. hidraulična pumpa, hydraulic pump: The Chief Engineer found a fault with the CPP hydraulic pump unit which had caused the pitch control to fail. As a result of the crew being in the engine room, the main engines and generators were kept running, although the controllable pitch propeller hydraulic pump had to be restarted to maintain propulsion, hydraulic control hidrauličko upravljanje: Steering gears can be arranged with hydraulic control equipment known as a 'telemeter', or with electrical control equipment. In principle, this consists of the ME engine hydraulic control oil system and an ELGI valve, hydraulic line hidraulički vod, hidraulička cijev: Following a temporary suspension in operations due to a hydraulic line failure, the anchor was aweigh at 1039, hydraulic control platform postolje za upravljanje hidraulikom: The AB went round to the starboard hydraulic control platform and could not find the chief officer, hydraulic clutch hidraulička izvrstiva spojka, hidrauličko kvačilo: At engine loads above 50 per cent of the optimized power, the power turbine is connected to the crankshaft via a hydraulic clutch and flexible coupling, hydraulic coupling hidraulička spojka, hydraulic drive system hidraulički pogon: The fire pump was in operation to provide cooling water for the windlass hydraulic drive system, hydraulic governor hidraulički regulator: Governor The engine revolution per minute is controlled by a hydraulic governor, hydraulic hose hidraulička savitljiva cijev, hidraulička fleksibilna cijev: Above the cargo discharge pipe a hydraulic hose was found to be leaking from an end fitting, hydraulic machinery hidraulički strojevi, strojarnica hidrauličkog sustava: The team, led by the C/E, and comprising of the 3/E, J/E and an OS, entered the hydraulic machinery room and started the main pump motor, hydraulic fluid hidraulična tekućina: the Chief Engineer instructed the motorman to go to the steering gear flat and mop up a small quantity of accumulated leaked hydraulic fluid, hydraulic motor hidraulički motor: Subsequent operation of the controls resulted in sudden overloading of the hydraulic motor and sheared the drive shaft linkage, hydraulic pipe hidraulička cijev, He was attempting to dismantle a hydraulic pipe on deck to carry out repairs, hydraulic piston hidraulički klip: The tightening force is applied by a hydraulic piston to which oil is fed via the engine’s lubricating/cooling oil system, hydraulic power snaga hidraulike, jačina hidrauličkog sustava,
hidraulička energija, hidraulički pogon: The crane’s hydraulic power was drawn from the tug’s port main engine, which had to be running for the crane to operate. As the ship’s port list increased, hydraulic power was lost, resulting in band brakes on the automatic trawl winch system activating.

hydraulic actuator hidraulički pokretač, servomotor

Hydraulic Electronic Unit Injector (=REVI) (n) (marine eng) An electronically controlled injector that uses hydraulic pressure acting on an intensifier mechanism to produce fuel injection pressure. (http://www.marinedieseleurope.com/) hidraulički elektronički ubrizgač

hydraulic grab (n) (cargo handling) hidraulički grimalič: In executing this task, the upper end of pipe, which was lying alongside, was grasped by the heavy crane by means of a hydraulic grab and raised on one side.

hydraulic jack (n) 1 (marine eng) hidraulički pritezni uređaj (za vijke): Again the hydraulic jack was pumped to approximately 250 bar pressure, the pin was struck again and the deflected maul landed heavily on the leading seaman’s right hand. There are four bolts at each connection point which help for assembly and removal of the connecting rod, and are tightened to their required torque using hydraulic jack. Extracting the sheave pin appears to be in order, the risk assessment must consider the possibility of two more hazards when applying tension with the hydraulic jack: 1) the rod coming off the pin due to corroded/wasted threads and, 2) the threaded rod fracturing, especially if not of approved strength. Therefore, most of the important or big screws are tightened hydraulically on ships such as cylinder head nuts, exhaust valve nuts, for crank pin bearing, cross head bearing, main bearing, tie bolts, etc. (http://marineengineeringonline.com/an-introduction-to-hydraulic-jacks-on-ships/)

hidraulička dizalica: A hydraulic jack, supported in the oil sump, offers the possibility to lower and lift the main bearing caps, https://wartsila.www.com
hydraulic oil (n) (marine eng) hidraulično ulje: Any leakage of fuel, lubricating and hydraulic oil should be disposed of in accordance with Oil Pollution Regulations at the earliest opportunity. During this operation, a flexible hose on the crane came adrift from its coupling and hydraulic oil under high pressure sprayed out, some of it entering the bosun’s eyes.

hydraulic oil leakage curenje hidrauličkog ulja, puštanje hifrauličkog ulja: Over the years, the steering rams had suffered from hydraulic oil leakage, and the hydraulic oil reservoir and header tank had been regularly topped to cope with the loss of oil.

hydraulic press (n) (nav arch) hidraulička preša

hydraulic ram (n) (marine eng) hidraulički klip, hidraulička dizalica

hydraulics /haiˈdrɔliks/ (n) (marine eng) hidraulika: The crew were called, and the engineer went to the engine room to start the hydraulics ready for hauling. The skipper tried the main engine stop button, but this did not work either, so he reduced engine speed and engaged the hydraulics to try and stall the engine.

hydraulic tensioning (n) (marine eng) hidrauličko pritezanje (vijaka na motoru)

hydrodynamic effects (n) (navig, ship handling) hidrodinamički utjecaji: It is important that bridge teams consider the hydrodynamic effects their vessels are subject to while navigating and manoeuvring in narrows such as the St. Lawrence Seaway. https://safaty4sea.com

hydrofoil /ˈhaidrəˌfaɪl/ (n) (nav arch) A boat that has foils under its hull onto which it rises to plane across the water surface at high speed. https://www.ypiyachts.com/; neistinski brod koji plovi iznad površine djelovanjem hidrodinamičkih sila koje se generiraju podvodnim krilima (Min. pomorstva RH)

hidrokrilni brod: I recently travelled from Sicily to Stromboli and back again using one catamaran and two separate hydrofoil passenger vessels for different legs of the journey.

hydrofoil technology (n) (nav arch) Hydrofoils reduce the drag of the vessel by a factor of two. The ship's powering requirements are also halved, which increases the speed and range of what an electric ferry can do. (https://safety4sea.com) tehnologija hidrokrilnih brodova: Hydrofoil technology is the key to enabling electrification of passenger ferries. https://safety4sea.com  
hydrogen /ˈhaidridʒən/ (n) (chem) Hydrogen is one of the potentially zero-carbon fuels that is being considered for use in marine applications of the future. (https://safety4sea.com/) vodik:  
Sulphamic acid will liberate hydrogen gas as it attacks scale and steel and the work site must be tested for the presence of hydrogen after the cleaning operation. Carbon yields 8080 kcal/kg when completely burned, hydrogen 34 000 kcal/kg; oxy- gen is assumed to be already attached to its proportion of hydrogen: that is, an amount of hydrogen equal to one-eighth As the steam drum door was opened, the air combined with the hydrogen to create a mixture that was within the hydrogen's wide explosive limits; Insufficient arrangements were made to ventilate the boiler ... hydrogen chloride vodikov klorid: Freons decompose producing hydrogen chloride, hydrogen fluoride, phosgene, and chlorine., hydrogen peroxide vodikov peroksid: The chief officer quickly identified the contents of the tank as hydrogen peroxide, and consulted the appropriate substance information sheet on the ship’s dangerous cargo database., hydrogen sulphide vodikov sulfid: This unusual property of hydrogen sulphide makes it extremely dangerous to rely totally on the sense of smell to warn of the presence of the gas., hydrogen bunkering skladišni kapaciteti za pogonski vodik: The cost of Hydrogen bunkering facilities is expected to be higher than that of LNG facilities, run on hydrogen imati pogon na vodik (o brodu): develop a newcastlemax bulk carrier that can run on hydrogen produced from LNG on board., https://safety4sea.com/  
hydrogen fuel cell (n) (marine eng) goriva čelija vodika (za pogon broda):  
Samskip’s vessels will be powered by a 3.2 MW hydrogen fuel cell each, with diesel generators installed.

hydrographic vessel (n) (nav arch) Vessel designed for the survey of seabed topography, currents, etc., relevant to marine navigation. https://officerofthewatch.com/tools/maritime-dictionary/

**ignite** /ɪgˈneɪt/ (v) (marine eng, safety) zapaliti( se), upaliti se (motor): The compressed air from the bottle is necessary to ignite the fuel. The starboard cargo engine (its lever left in the ON position) must have developed high pressure in the cylinder causing the safety valve to crack open and ignite the flammable gases in the engine room. If the impact had been more direct, the steel plate could have pierced the tank, and also provided the energy to ignite the flammable mixture of fuel vapour and air which would have formed within the truck’s empty tanks. The cargo was liable to self-heat and ignite spontaneously because it contained fine shavings contaminated with cutting oil, cast iron borings and organic flammable materials. Unfortunately, the junior engineer succeeded in his attempt to ignite the boiler and the residual fuel ignited explosively.

impose (v) (mar law, marine eng) nametnuti: The cylinder conditions in the latest designs of low-speed crosshead engines impose a higher maximum pressure, higher mean effective pressure and higher cycle temperature than those of previous generations. Finally, inadvertent over-tightening of gangway (and lifeboat) wire falls during stowage can impose excessive loads for long periods on the system. Each and every word on the vessel’s port papers is checked to find any flaws, so as to be able to impose heavy fines ... Subsequently, during a PSC inspection, the PSC official noted this open valve, which was in contravention of local regulations and imposed a penalty on the vessel. Such legal requirements are probably years away from being imposed, but there can be little doubt that such a move would be in the interests of good practice. It is admitted that, in spite of the constraints imposed by the regulations of the port, ship’s personnel failed to carry out a Can-thumping test as per Code of Safe Practice for Solid Bulk Cargoes section .. impose a ban (on) (mar law) uvesti zabranu: I brought the matter up in the safety meeting and have imposed an official ban on the use of the mobile phones on the navigating bridge while the ship is at sea .., impose radio silence (comm) narediti radio-šutnju: The distress traffic controlling station/other stations may impose radio silence on any interfering stations by using the term “Seelonce Mayday/Distress”, unless the latter have messages about the distress.

in accordance with (prep prh) u skladu s: Maintenance systems should be designed and followed to ensure that watertight doors are maintained in accordance with manufacturers’ instructions,
and in accordance with good standard marine engineering practice. Ten minutes before transit, own ship altered course to 090 in accordance with the passage plan, in order to pass between beacons. Earlier, at about 23:30 hours, I had encountered a head-on vessel and, in accordance with Colregs, I altered our original course from 259 degrees to a new course of 285 degrees in order to pass the other at a safe distance. Reduction in speed from full speed to the recognised manoeuvring speed is to be as gradual as possible and in accordance with the manufacturer’s instructions. Two tugs were assisting, one was made fast on the port quarter and the other was standing by forward to assist in accordance with pilot’s orders. Hence, he lacked an understanding that his was a stand-on vessel in a crossing situation and was therefore expected to maintain course and speed in accordance with Rule 17(a) (i) of the COLREGs. The clearance must be set in accordance with the temperature of the engine. Check that all non-cargo lifting appliances on board have been identified and recorded in accordance with national regulations. In accordance with the pre-arrival schedule and loading plan, extra ballast was being pumped out.

**inaccuracy** (n) nepreciznost, manja netočnost: To keep measurement inaccuracies to a minimum, standard procedures should be adopted by the ship’s crew when measuring cargo and calibrating equipment. Despite the fact that the master had 12-years experience as master mariner, in this case he demonstrated inaccuracy in visual range finding abilities and estimation of own ship speed as well as possible unawarness of ship’s inertia characteristics. **inadequate** (adj) neodgovarajući, neprikladan: ... a hazardous condition was found but the repair was grossly inadequate and did not eliminate the unsafe condition. Inadequate assessment of needs and risks; He came to the engine room and observed that all the sea water pumps were showing inadequate discharge pressure. The securing of these drums was evidently inadequate for the intended purpose: either the lashings used or their securing points were not capable of restraining the oil drums or were poorly adjusted/secured. An accident can be defined as an unexpected hazardous occurrence caused by unsafe practices that arise from inadequate knowledge, improper training, and failure to follow proper procedures, and usually resulting in loss of life or injury to personnel, damage to property etc. The events leading to the capsize were a mix of complacency, poor shipboard procedures and inadequate leadership, both afloat and ashore. The root cause of the accident was the failure of the pilot ladder due to inadequate maintenance and inspection. The fact that the boats involved in the collision were not carrying radios to communicate their predicament demonstrated the inadequate planning for the passage. Inadequate risk assessment and work planning, position of high sea suction and changes to draughts not adequately considered. Inadequate securing of items, cargo nets not used in conjunction with pallets. Improper motivation arising from complacency, inadequate supervision, operating without authority and defective equipment also contributed to the error chain.

inert (n) (cargo handling, safety) inertirati (prazan prostor u tanku): ... chemical tankers have nitrogen plants capable of supplying large amounts of N2 but I am not sure if this is sufficient or of high enough quality to inert all tanks for all cargoes carried that have a low flash point. How to carry out inerting, pugging, and gas freeing?
inert gas (=IG) (n) (cargo handling, safety) A gas such as carbon dioxide or nitrogen that is used to make an oxygen deficient atmosphere. Inerted tanks are useful for preserving cargo integrity and reducing the explosive potential of cargo tanks.

https://officerofthewatch.com/tools/maritime-dictionary/; An inert gas is one which has little or no ability to react with other gases, or to heat (e.g. nitrogen and CO2) (www.euronav.com) inertni plin: Carriage is only permitted under an inert gas blanket; The ventilation from an IG (inert gas) blower was on but the IG inlet was opened on all cargo tanks. During the stoppage, tank pressures rose significantly probably as a result of the unsaturated ullage space containing mainly inert gas; During this period, due to very high ambient temperature, No 2P COT pressure relief valve opened, releasing inert gas (IG)/cargo vapour mixture to the atmosphere, in breach of the applicable Annex 6 of Marpol. Prior to berthing, the tank inert gas pressures had been reduced to 70 mm WG; 4. The inert gas is used to blanket the oil cargo during discharging operations.

injection pump: A high-variable-pressure pump delivering fuel into the combustion chamber. (http://www.marinedieseleurope.com/)

injection system: The nozzle is the interface between the injection system and the combustion process; good nozzle performance is essential for good combustion. Two electrically driven pumps installed at the front end of the engine provide hydraulic power for the injection system.

injection timing: The cetane number or diesel index will determine injection timing and also influences the combustion noise and production of black smoke. Fuel injection timing can be freely adjusted independently of the injected quantity. Higher NOx emissions were neutralized by slightly delayed injection timing.

injection valve: Each cylinder is individually served by a fuel injection pump, HP pipe and injection valve with uncooled nozzle. The pilot fuel system is a common rail (CR) system with one engine-mounted high-pressure pump supplying the pilot fuel to every injection valve at a constant pressure of 900 bar.

INMARSAT (n) (comm, navig) a British satellite telecommunications company, offering global, mobile services. It provides telephone and data services to users worldwide, via portable or mobile terminals which communicate to ground stations through eleven geostationary telecommunications satellites. A system of geostationary satellites for world-wide mobile communications services and which support the Global Maritime Distress and Safety System and other emergency communications systems.

(IAMSAR/Comsar2014) Organizacija INMARSAT: Maintain the Inmarsat SafetyNET watch and disable the HF DSC watch until it has to be activated as the standby means of shore-ship alerting, should SafetyNET fail ... If the sole means of Distress Alerting in Sea Area A3 were INMARSAT-C, disregarding the use of an EPIRB, the number of False Distress Alerts/Relays would be significantly less. To look at it from another angle: Inmarsat-A, Inmarsat-B and Fleet 77 equipment is all allowed to be installed as part of a ship's GMDSS fit. So, if their Inmarsat-A happens to include a SafetyNET facility, they do not have to programme their 'A' to receive SafetyNET information in addition to their Inmarsat-C.

jerk pump (n) (marine eng) A positive displacement pump with a close fitting piston.

There are two basic systems in use, each of which employs a combination of mechanical and hydraulic operations. The most common system is the jerk pump system; the other is the common rail. In the jerk pump system the fuel is metered and raised in pressure by a separate fuel pump for each cylinder. The pump is timed to force the fuel through the injector into the cylinder at the appropriate moment. jerk pump sysetm sustav visokotlačnih sisaljki za ubrizgavanje goriva, sustav Boschovih pumpa

The pump, which was being used as part of the cockle dredging operation, was being topped up with petrol from a Jerry can while it was running.

If it is necessary because of insufficient steam for fuel heating, to use Diesel Oil or other lower viscosity fuel a single pressure jet burner with the smallest available tip is to be used. Cooling oil is jet sprayed into passageways within the piston. The design addresses the demands of waterjet operation, notably sudden large load changes if air is drawn into the jet unit in severe sea conditions. water jet (safety) mlaz vode: This was followed by a water jet from a charged fire hose and the fire was soon extinguished. jet nozzle (safety) mlaznica: The seaman descended to the top platform, bringing with him a fully pressurized fire hose fitted with a jet nozzle.

LCL /lɛl siː el/ (=Less than container load) [n] (mar law, shipping econ) COMPARE F.C.L. = less than container load

Less than Container Load – this is when the same container is used for cargoes belonging to multiple shippers and consignees. The clients deliver their cargo to the lines packing station (CFS – Container Freight Station) and the line then packs the delivered cargo on behalf of the client. LCL is one of the Container Service Types in shipping.

(https://www.shippingandfreightresource.com/); Less than Container Load refers to the freight forwarders shipping product where cargo from multiple customers is consolidated into one standard marine container. (https://www.transporteca.com/lcl-less-container-load/); Here the carrier takes the goods from two or more shippers, packs them into the container and seals it.

http://www.mindserpent.com/American_History/reference/Tetley_admiralty/Tetley_2004.htm; Common term for an amount of goods to be shipped and which do not fill an entire container (http://www.maerskline.com/en-jm/help/shipping-glossary); Cargo failing to qualify for freight rates given to a standard shipping container due to insufficient quantity or weight.

(http://www.leewardcorp.com/es); Consignment of cargo, which is insufficient to fill a shipping container. It is grouped with other consignment for the same destination in a container at a container freight station. (http://www.leewardcorp.com/es); Consignment of cargo, which is insufficient to fill a shipping container. It is grouped with other consignment for the same destination in a container at a container freight station http://www.tkmglobal.net/chartering_L.htm; LCL (less than container load) is a mode of shipping via ocean. If you don’t have enough cargo to fill up an entire container, consider shipping LCL. (https://www.flexport.com/glossary/less-than-container-load/)

zbirni kontejner (kontejner s robom koja glasi na više različitih primatelje): Ocean rates for LCL are commonly higher on a per-unit basis than for a full container load. Thus, consolidation of several LCL loads from different places or shippers into a full container can save on costs. Less than Container Load (LCL) is a service offered by freight forwarding companies, allowing shippers to book only part of a container. The smallest standard marine container carries a volume of 33 cubic metres or a weight of 28 tons – so an LCL service should be considered for any shipment considerably smaller than this. With an LCL shipment, you pay for your load to be shipped in a container with one or more loads from other customers of the freight transport provider. LCL lets you ship in smaller volumes so that you can keep your inventory lean. Instead of purchasing large quantities from suppliers, you can use LCL to keep a steady flow of inventory in smaller quantities. That frees up cash flow for other purchases. When an FCL shipment arrives at port, it’s unloaded from the vessel and delivered to the buyer. It’s more complicated for LCL: someone has to consolidate different shipments, process multiple documents per container, and then sort goods for each customer (https://www.flexport.com/learn/ship-by-lcl-or-fcl/) in the case of LCL shipments, the shipping line operates the container and therefore, is responsible to off load the contents of the container at their CFS.

lee /liː/ (n) (meteorol, navig) a downwind area of the sailboat/ship or on the side of it; an area sheltered
from the wind zavjetrina: The pilot boat came on the lee side, because the prevailing 20 knot wind,
sea conditions were fairly rough and cold. A deep sea fishing vessel’s main engine stopped at a critical
moment after she had been sheltering from severe weather for almost 2 days in the lee of an island. Due to
a deep depression producing severe gales, the vessel remained within the lee of the land for most of her
voyage. on the lee u zavjetrini, the lee of the breakwater zavjetrina lukobrana,

leech /liːtʃ/ (n) (sailing/boating/yachting) the back edge of a sail; the aft or trailing edge of a
fore-and-aft sail; the leeward edge of a spinnaker; a vertical edge of a square sail stražnji rub
jedra, stražnji porub jedra, ventana, ventam, Italian: balumina: The sheet
exerts a large downwards force on the leech of the sail when the boom is directly above it, much more than
the kicker. The kicker controls leech tension and twist when the boom has passed to leeward of the
traveller. A series of telltales along the leech of the main should flow evenly. Most boats benefit from a
boom vang, which keeps tension on the mainsail's leech.
https://www.slideshare.net/galeforcesailing/sail-trim-and-balance-fundamental

**leech** *(n) (sailing/boating/yachting)* stražnji rub floka / špinakera: the trimmer set the jib to her normal setting and observed the jib leech telltale flowing 100 percent of the time.

**leech cord** *(n) (sailing/boating/yachting) = leech line ventam, konopac stražnjega poruba jedra, majolica:* The leech cord is really not a sail trim devise. It's main purpose is to stop the leech from fluttering BUT it does have some sail trim advantages. The leech cord on a mainsail can also be used to fine-tune leech twist.

**leech line** *(n) (sailing/boating/yachting) = konopac stražnjega poruba jedra, ventam; ventan; majolica; dušica:* Tension on the leech line supports the edge of the sail to keep it from fluttering. Most new sails today come with leech lines built-in, particularly on larger sailboats.

**lee helm** *(n) (sailing/boating/yachting) = ANTONYM weather helm* list kormila više u zavjetrenoj strani; tendency of the boat with poorly trimmed sails to continually turn downwind on its own or if the helm is released skretanje kormilom od vjetra, bježanje od vjetra, zavjetreno kormilo, otpadanje, Italian: *barra sottovento:* Moving the sails' center of effort forward of the center of lateral resistance tips the scale in the other direction and forces the bow away from the wind, creating lee helm. If you experience lee helm in light air, shift crew weight to leeward to heel the boat and build weather helm.

**Lee-Oh!** *(interj) (sailing/boating/yachting)* uzvik pri zapovjedi za letanje (bordadu): Most crew sensibly take the view that lee-oh means let go the genoa sheet, which upsets those skippers who shout lee-oh at the start of the tack, and like to use the lift from the genoa generated by the rotation of the bow through the wind. The order Lee-oh is given when the genoa starts to luff.

leeward /ˈliːwəd, ˈluːəd/ (n, adv) (navig) ANTONYM windward zavjetrina: The sailing boat was hit by a particularly strong gust of wind which caused it to capsize to leeward. It was fortunate that the yacht grounded on a reef with safe water to leeward. The analysis conducted after the incident, using the ship’s manoeuvring and “rate of turn” data, revealed that the initial “wheel over” position was too far to leeward, given the prevailing wind strength and direction. When the wind is pushing the ship’s stern away to leeward, the stern tends to swing towards the leeward

We are making .... degrees leeway (IMO SMCP). This allowed the westerly wind, blowing across the channel from the left, to have a greater effect on leeway. Correcting the DR position for leeway, current effects, and steering error result in an estimated position (EP). (Bowditch) Leeway and current effects combine to produce the most pronounced natural dynamic effects on a transiting vessel.
leeway divergence angle

The average angle between an object’s direction of leeway and the downwind direction. (IAMSAR/Camsar2014) kut divergencije pri zanošenju: Leeway may diverge to either the right of the left of the downwind direction. Current evidence indicates that objects with significant leeway divergence angles rarely jibe or tack downwind.

letter of guarantee (n) (mar law) A written undertaking, or letter of indemnity, usually provided by a bank, promising to hold the carrier harmless, up to a certain sum, for claims that may arise from the delivery of goods to a particular person who is unable to surrender the original bills of lading in return for the goods. garantno pismo (pri dolasku broda), garancija, jamstvo: Guarantee letter is issued by the bank to the shipping company as a Bill of Lading:B/L for receiving products before Shipping Document's arrival Letters of guarantee, reasonably worded, are a perfectly legitimate device to protect the carrier from claims if cargo is released without production of the original bill of lading. (http://www.fta.co.uk/policy_and_compliance/sea/long_guide/letters.html) Shippers should try to arrange delivery contracts in such a way that recourse to a letter of guarantee does not become necessary.

letter of indemnity /ɪnˈdemnɪti/ (=LOI) (n) (mar law) A written undertaking by a shipper (infra) to indemnify a shipper for any liability which the carrier may incur for having issued a clean bill of lading when, in fact, the goods received were not as stated on the bill of lading. Such a letter is usually a central document in a fraud, whereby the shipper and carrier knowingly misrepresent to third parties the actual order and condition of the goods at the time of shipment or the bad order of the packing, or whereby they issue duplicate bills of lading to replace lost or stolen originals. Letters of indemnity should not be condoned by courts and are generally held ineffective as against third parties.

isprava kojom se tražitelj obvezuje da će od brodovlasnika, njegove službenike i agenta obeštetiti u odnosu na svaku odgovornost, gubitak, trošak ili oštećenje koji može nastati zbog provedbe njegova naloga. (D. Pavić); Written statement in which one party undertakes to compensate another for the costs and consequences of carrying out a certain act, for example, a shipper who has been delayed in sending an original Bill of Lading to the receiver may instruct the master of the ship or the shipowner to release the goods to a named third party without production of an original Bill of Lading.

is a document contractually obligating the shipper to take responsibility for any loss or damage resulting from a breach of contract (like the terms and conditions of a bill of lading). (https://www.flexport.com/glossary/letter-of-indemnity/) jamčevno pismo, garantno pismo: There is no p&i cover for misdelivery of cargo, so change of destination is usually the subject of a letter of indemnity ... In case of cargo being lost or delayed in transit, the shipping company will allow delivery of the goods to the person claiming to be the consignee, if he gives a letter of indemnity; this is normally countersigned by a bank, and relieves the shipping company of any liability should another person eventually come along with the actual bill of lading. When the owners instruct the master to accept a letter of indemnity (LOI), they will take steps to ensure that the wording of
the LOI presented to the master is the same as that which they have proposed. Carriers who meet a shipper request to issue a clean bill of lading in spite of pre-shipment damage or to backdate a bill of lading to meet letter of credit terms sometimes require letters of indemnity. The master or owner, if they agree, may require a letter of indemnity from the shipper for the consequences of complying should it turn out that the named party is not entitled to take delivery of the goods. It should be noted that, as a rule, any such letter that seeks to indemnify against an act, which is intended to defraud an innocent third party, is unenforceable in a court of law. http://www.leewardcorp.com/es/ The master or owner, if they agree, may require a letter of indemnity from the shipper for the consequences of complying should it turn out that the named party is not entitled to take delivery of the goods. http://www.tkmglobal.net/chartering_L.HTM Flexport will require an LOI if the consignee is receiving cargo without the presentation of an endorsed original bill of lading; i.e. if the shipment is released with a telex release. https://www.flexport.com/glossary/letter-of-indemnity/

Shipowners are generally entitled to limit their liability in respect of claims arising from damage caused by their ships. The maximum liability of a shipowner is usually calculated based on the size of the ship involved in the incident and has no relationship to the amount of damage caused by the incident. There has been a trend in the more recent Conventions to establish systems of determining liability to pay compensation for damage, in addition to providing a limit on the shipowners liability. Liability of the owner of a seagoing ship in case of damage to cargo or persons due to collision or other accidents is not unlimited. A marine loading arm, also known as a mechanical loading arm, loading arm, or mla is a device consisting of articulated steel pipes that connect a tankship such as an oil tanker or chemical tanker to a cargo terminal.

liquid cargo is nowadays usually transferred using an articulated arm loading/discharge systems, and groups of loading arms are often found on a shore refineries or on offshore loading facilities. The loading arm will be out of service for some time, resulting in financial consequences for the terminal; Mainly used in the oil and gas industry, loading arms and hoses are storage tank equipment commonly used to transfer fuel or liquid. Nowadays, a loading arm is recommended suitably for tanker loading and unloading, it is seen as the safe, fast and easy way of operation especially in the terminals.

All loading arms are chiksans with quick connector couplings. Loading arm coupling spojka mehaničke ruke, ship's loading arm mehanička ruka za krcanje tekućih tereta, brodska dizalica za ukrcaj/iskrcaj nafte, terminal / shore loading arm obalna mehanička ruka, disconnect the loading arm isključiti spoj mehaničke ruke: The personnel from the shore have disconnected the loading arms.
loading berth (n) (ports) ukrajnai vez: The ship moved away from the loading berth and started rolling. Two pilots were called to sail the loaded vessel and shift the smaller vessel onto the same loading berth.

loading broker (n) (mar law) Company that represents a shipping line at the port of loading. Its duties are to advertise the line’s sailings, to obtain cargoes and co-ordinate their delivery to the ship and to sign bills of lading on behalf of the master. (http://www.leewardcorp.com/es/)

agent-posrednik, agent koji posreduje pri ukrcaju tereta

loading calculator (n) 1 kalkulator krcanja i slaganja tereta u kontejneru: The 3D Load Calculator is a tool where you can insert all the pieces you want to load in a container and see the optimal way to load it in a container; 2 (cargo handling) kalkulator krcanja tereta i stabiliteta broda, lodikator

loading computer (n) (cargo handling) računalo za krcanje tereta i stabiliteta broda: The ship’s loading computer was then used to check that the vessel was safe with the pump room flooded. In the loading computer, there is an ullage entry program where tank ullage tables, petroleum measurement tables are all interlinked with formulae. Ships were, at this stage, still supplied with loading computers that continued to calculate a ship’s stability, shear forces, bending and, occasionally, torsion moments. Many of these functions are available only if the tank / draught level gauges and the Ballast Control system is interfaced to the ShipLoad Loading Computer. https://www.km.kongsberg.com/

**Loading instrument** (=loadicator) (n) (cargo handling, stabil) A loading instrument is an instrument, which is either analogue or digital, by means of which it can be easily and quickly ascertained that, at specified read-out points, the still water bending moments, shear forces, and the still water torsional moments and lateral loads, where applicable, in any load or ballast condition will not exceed the specified permissible values.

(http://www.iacs.org.uk/document/public/Publications/Resolution_changes/PDF/UR_S1_Rev7_pdf1322.pdf); a shipboard calculation tool which assists the ship’s cargo officer in: 1. Planning and controlling cargo and ballasting operations; 2. Rapidly calculating SWSF and SWBM for any load condition.; 3. Identifying the imposed structural limits which are not to be exceeded.

(http://marinegyaan.com/what-is-use-of-loadicator-or-loading-instruments-on-ships/); a shipboard instrument to calculate trims, drafts, etc.

**Loading manual** (n) (cargo handling, stabil) upute za krcanje (tereta), priručnik za krcanje (tereta): The approved *Loading manual* provides a description of the operational loading conditions upon which the design of the hull structure has been based. The approved *Loading Manual* is to be based on the final data of the ship. The *Manual* is to include the design loading and ballast conditions upon which the approval of the hull scantlings is based.

**Loading master** (n) (cargo handling) the marine transfer operator at the marine terminal who supervises the movement of petroleum products between tanker ships, barges, and the terminal while the vessel is berthed at the dock (https://en.wikipedia.org/wiki>Loading_master) lučki nadzornik krcanja tereta / broda, lučki voditelj krcanja tereta / broda, nadzornik krcanja tereta / broda: Agent and *Loading Master* do not board before sailing, so no signatures are possible on 19 L or Letter of Protest. If inspectors or loading master are onboard at the time, get them to seal the samples, with an accurate description of the contents. Normally a loading master or the pilot remains on board, once the vessel is moored, to co-ordinate communications between ship and terminal, as well as assessing weather. A short time later, the *loading master* again asked if the vessel was ready to load but still the lines were not cooled to the correct temperature.
loading operation (n) (cargo handling) Throughout the loading operation, the dock water density was consistently measured by the Chief Officer to be about 1.013.

loading order (n) (mar law, shipping econ) pismeni nalog lučkom operateru za obavljanje rada koji izdaje korisnik lučkih usluga: dispozicija (ukrcaja), nalog (ukrcaja)

loading plan (n) (cargo handling) plan krcanja: There was no dangerous cargo in this area according to the loading plans. In accordance with the pre-arrival schedule and loading plan, extra ballast was being pumped out. The loading plan should always be prepared carefully and, especially for containerships, calculations should include the characteristics of each loading and all different sizes of containers.

loading port (n) (cargo) luka ukrcaja: The vessel was en route to a loading port, when the chief engineer commenced routine maintenance of no. 1 auxiliary engine as per maintenance programme. ... a coastal LPG tanker was north-east bound in the Dover Strait Traffic Separation Scheme en route to its loading port in Scotland. The terminal managers in the loading port did not consider the cargo to be hazardous, and the wet cargo was loaded in rain without trimming or measuring the cargo temperature.

loading rate (n) ANTONYM unloading rate (shipping econ, ports) brzina ukrcaja (u tonama, koletima, broju kontejnera), kapacitet ukrcaja: The hourly loading rate was about 10,000 cu m/hr and six cargo tanks were receiving the cargo simultaneously: two tanks per connection. The initial loading rate of 120 m³/hr was gradually increased to 250 m³/hr. The hourly loading rate was about 10,000 cu m/hr and six cargo tanks were receiving the cargo simultaneously: two tanks per connection.

loading sequence (n) (cargo handling) redoslijed krcanja: A few amendments were made to the loading and deballasting plan and a revised loading sequence was submitted. However, the master stated that he would only agree to continue loading after re-working the loading sequence based on the higher rate of loading now demanded.

loading terminal (n) (ports) ukrcajni terminal u luci: The SPM tower, located in position Lat. 29°_06.90' N, Long. 048°_19.30' E, approx. 1.5 n.m. east of the damaged loading terminal. The loading terminal numbers the tiers from the bottom of the hold upward including the containers on deck. The cargo stowage plan is prepared by the loading terminal after the ship has been loaded and is used to facilitate the subsequent loading and discharge of cargo at all ports along the voyage.

loading valve ventil za ukrcaj (tekućih tereta): In order to stagger the topping off process of the cargo tanks, the cargo tank loading valves had been adjusted to achieve the desired 'spread'.

load levelling device (n) (cargo handling) uređaj za izravnavanje tereta
load lifting magnet (n) (cargo handling) magnet za dizanje (tereta)
load line (n) (nav arch) The maximum draft to which the vessel may load. The line on a vessel indicating the maximum depth to which that vessel can sink when fully loaded with cargo.

(www.euronav.com) teretna linija, teretna crta: A hydrostatic instrument installed in the side of a vessel, below the light load line, to indicate the depth to which a vessel is submerged. While discharging at an SBM, a VLCC was required by her owners to have the Load Lines changed, in order that the Class Surveyor could check and issue the new certificate on completion of discharge. summer load
Loading line markings (nav arch) Markings on the ship’s side defining the minimum freeboard allowable in different ocean areas and different seasons of the year.

Load lines (nav arch, mar law) Lines painted on the side of a ship, indicating the maximum depth to which the vessel may safely be loaded. See also the International Convention on Load Lines, adopted by IMO on April 5, 1966, which came into force July 21, 1968.

**log** /lɒg/ (=**log book**) (n) (mar law, navig) A record book carried aboard a ship in which all significant events relating to the journey are recorded by the ship’s officers authorized to make such entries. A ship may have aboard more than one log, including an official log, an engine room log, a radio log, a rough log, etc. The log is at time prima facie evidence in a maritime dispute http://www.mindserpent.com/American_History/reference/Tetley_admiralty/Tetley_2004.htm

**dnevnik** (brodski, palube itd.): It cannot be overemphasized that clear and properly annotated echograms and navigation logs are especially important in shoal reports. On very large ships, such as VLCCs, some guidance may be available from reliable doppler logs, but on many ships a **doppler log** is not available. Like time-delay measuring logs, Doppler logs can only track the seabed in relatively shallow waters. Modern logs use electronic sensors or spinning devices that induce small electric fields proportional to a vessel’s speed. keep a log voditi dnevnik, voditi brodski dnevnik:

**magnetic compass** *(n) (navig)* an instrument employing a magnetized needle which aligns with the Earth’s magnetic field and indicates magnetic north

(http://www.seatalk.info/cgi-bin/nautical-marine-sailing-dictionary) *magnetski kompas:* This magnetism is the principal cause of deviation changes of a magnetic compass. The process of neutralizing the magnetic effects the vessel itself exerts on a magnetic compass is properly called COMPASS ADJUSTMENT; but the expression COMPASS COMPENSATION is often used for this process, too. A marine magnetic compass, usually of the inverted type, frequently installed in the master’s cabin for his convenience. After 1840, British Astronomer Royal Sir George Airy and later Lord Kelvin developed combinations of iron masses and small magnets to eliminate most magnetic compass error.

marine engineer officers are responsible for the maintenance and operation of a ship's main propulsion machinery and auxiliary plant, including deck machinery, air conditioning plants, refrigeration plants and domestic and electrical services. A responsible marine engineer watchkeeper has to fill the log book for his/her own watch period without fail, along with the signature of all watch keepers for their concerned watch. Depending on the type of ship and the operational circumstances, marine engineer officers will be required to keep watches in the ship's engine room. As a marine engineer working on ships, you would be required to monitor the performance of turbochargers during the watch and carry out maintenance whenever required. The successful candidate may be awarded a diploma and will then be able to work on

**marine fuel** (n) *(marine eng)* There are marine fuels that are seriously being considered to replace Heavy Fuel Oil (HFO), the dirtiest and most-polluting residual fuel for ships. These are Liquefied Natural Gas (LNG), Marine Gas Oil (MGO), Marine Diesel Oil (MDO), Ammonia (NH3), Methanol (CH3OH), Fuel Cell Batteries, Hydrogen (H), Liquefied Petroleum Gas (LPG), and Biofuels for the shipping industry.

(brodsko gorive): Marine fuels were traditionally classified after their kinematic viscosity. This is a mostly valid criteria for the quality of the oil as long as the oil is made only from atmospheric distillation. Marine fuel analysis is performed to ISO 8217 specifications, helping your ship fuel comply with Marpol Annex VI, the EU Sulphur Directive, Sulphur Emission Control Area (SECA) requirements, and other legal and quality standards.

The marine industry is under tremendous legislative pressure to reduce emissions, with fuel quality heading the list. One of the largest challenges a broker can face in the marine industry is being able to properly represent their clients operations and exposures to insurance carriers.

Marine infrastructure includes the platforms, subsea structures, pipelines, and cables crucial to our offshore activities in oil and gas, energy, and telecom.

Planning, designing and operating of marine infrastructure projects are complex and require understanding of the shipping and maritime sector, expertise in civil construction and custom engineered structures on the waterfront and in the water.

Our company is experienced in complex and large marine infrastructure undertakings. We offer expertise across all phases of marine infrastructure and port construction projects.

Marine insurance covers the loss or damage of ships, cargo, terminals, and any transport or cargo by which the property is transferred, acquired, or held between the points of origin and the final destination. Marine Insurance is the insurance of interests (property and earnings) that may be imperilled in a maritime adventure. In basic terms there are three main types of marine insurance: Hull and machinery, Cargo insurance, and P&I insurance.

Marine Insurance Act: In the UK all present-day marine insurance contracts are governed by the 1906 Marine Insurance Act, where a contract of marine insurance is one that the insurer undertakes to indemnify the assured, in manner and to the extent that has been agreed.

The primary purpose of a marine investigation is to ascertain the cause or causes of an accident, casualty, or

There has been a substantial reduction in marine pollution over the last 15 years, especially with regard to the amount of oil spilled into the sea, despite a massive increase in world sea borne trade. One of the most effective means of combating marine pollution is by educating and training the operating personnel. Shipping is the least environmentally damaging form of commercial transport and, compared with land based industry, is a comparatively minor contributor to marine pollution from human activities.

Navigacijski radar, brodski radar: The bright rotatable radial line on the display of a marine radar set, used for bearing determination. The development of commercial marine radar entered a new phase in the 1980s when raster-scan displays that were compliant with the IMO Performance Standards were introduced. The common wave length in a marine radar is: a) 3 and 10 cm b) 3 and 10m c) 600 m d) 500 kilocycles 4. The marine radar is classified under the x-band (10 GHz) or S-band (3GHz) frequencies With the help of ship radar, accidents can be prevented at sea with the use of the various inherent functionalities of the radar (determining the CPA and the TCPA, EBL, VRM etc).

With practice, a singlehander can deploy a stern anchor and maneuver the boat to a bow mooring.

A spring line hitched to the rode prevents a boat’s stern from sagging to leeward.

Lead rode and spring to cockpit winches to keep the bow lines tensioned.

If water near the dock is shallow or if gear protrudes from your boat’s transom, mooring bow-to may be your best method.

MF CW radar (=multi-frequency continuous wave radar) (n) (navig) multifrekvencijski CW radarski prijamnik MGO (=Marine Gas Oil) (n) (marine eng) Marine Gas Oil or MGO, is a high quality marine fuel that consists exclusively of distillates. Distillates are all those components of crude oil that evaporate during distillation and are then condensed from gas into liquid.
Marine gas oil (MGO) refers to marine fuels that consist solely of distillates, the components of crude oil that evaporate in fractional distillation and are then condensed from the gas phase into liquid fractions. It’s similar to diesel but has a higher density and unlike heavy fuel oil (HFO), marine gas oil doesn't need heating during storage.

Brodska plinsko ulje: MGO has inherently a transparent to light yellowish brownish color, but is colorized red. If a marine fuel like heating oil is used in inland waterway shipping, it is colorized with a yellow dye. These measures are to enable the detection of the type of use, and protect against the misuse of low-taxed and relatively cheap heating oil, which is often the same fuel used in inland shipping. https://maritimereview.ph/what-is-mgo/MDO has a flashpoint of 61°C. navigational instruments (navig) the instruments used by nautical navigators and pilots as tools of their trade. The purpose of navigation is to ascertain the present position and to determine the speed, direction etc. to arrive at the port or point of destination (https://www.google.hr/search?q=navigational+instruments&); Navigational instruments are measurement instruments that are used to help ascertain a present geographic position and to determine the speed, direction, altitude and other navigational parameters in order to help arrive at a point of destination.

Navigational instruments (GPS) units, an automatic radar plotting aid (ARPA) equipped radar with GPS input and a gyro compass with an auto-pilot. All Deck Officers must be thoroughly familiar with the operation and utilisation of all Bridge and navigation equipment. The vessel’s electronic navigation equipment, which included the electronic chart display and information system (ECDIS) 1, radar and the bridge navigational watch alarm system (BNWAS), were functioning correctly.

The atmosphere is usually established by flushing the container with nitrogen and CO₂. During transport, the atmosphere is regulated by nitrogen flushing or CO₂ and ethylene scrubbers. The crew used nitrogen to remove explosive gases following last week’s “thermal event” (battery warming). The safety zone surrounding it has been lifted. They used a hose to pump nitrogen into ship’s enclosed spaces and bulkheads to flush out any explosive gases to a nearby truck.

Nitrous oxide (N₂O), a potent greenhouse gas with a global warming potential approximately 298 times greater than CO₂ over 100 years, is among the byproducts of using ammonia for marine propulsion.

NVOCC (=non-vessel-operating common carrier; ocean transportation intermediary (OTI)) (n) (mar law) SEE house bill of lading COMPARE VOCC COMPARE freight forwarder SEE Ocean Transportation Intermediary A common carrier that does not operate the vessel by which the ocean transportation is provided, and is a shipper in its relationship with an ocean common carrier.
A common carrier that holds itself out to the public to provide ocean transportation, issues its own house bill of lading or equivalent document, and does not operate the vessels by which ocean transportation is provided. The main difference between a freight forwarder and an NVOCC is the responsibility. Although both companies will track your cargo and move it through the supply chain, an NVOCC is also acting as a carrier and has more responsibility for your cargo.

A Non-Vessel Operating Common Carrier (NVOCC) is an ocean carrier that transports goods under its own House Bill of Lading, or equivalent documentation, without operating ocean transportation vessels. Rather, an NVOCC leases space from another ocean carrier, or Vessel Operating Common Carrier (VOCC), that they sell to their own customers. An NVOCC can be described as a shipper to carriers and a carrier to shippers.

A NVOCC is often termed as a “carrier to shippers” and “shipper to carriers.” Blue Anchor Line, who are one of the top 25 NVOCCs in the world and ranked No.1 NVOCC in the world in 2017, will have various volume based space/rate arrangements with various carriers around the world, across various trade lanes. NVOCCs form the largest trade maker in the container shipping industry. It issues Bill of Ladings, assumes liabilities and responsibilities for the shipments, and may also own and operate its own or leased containers.

The FMC requires that the NVOCC puts down a bond of $75,000 upon registration. This provides a safety net for you should the NVOCC go out of business while having your cargo in their possession. NVOCCs are required to submit proof of financial responsibility for payment of claims (46 CFR Part 515 Subpart C) arising from its transportation-related activities. Prior to Offering Services in the U.S. Trades, NVOCCs are required to submit proof of financial responsibility for payment of claims (46 CFR Part 515 Subpart C) (arising from its transportation-related activities).

Cargo is offloaded at the manifold, usually located amidships. The ship had 658 containers on board on arrival of which 278 were offloaded, with 59 more to go. Vessels arriving Panama Canal after 30 March 2020, with drafts over 13.87m (45.5 feet) TFW, might be allowed to transit, depending on the actual levels of the lake at the time of transit. Otherwise, they will be required to trim or offload cargo in order to be allowed to transit.

https://safety4sea.com/panama-canal-implements-draught-restrictions/ 226 containers have been safely offloaded. Back-log in port operations need to be cleared. Twenty-two container ships were waiting to offload at the adjacent ports of Long Beach and Los Angeles as of Sunday. on scene

On scene refers to the search area or the actual distress site in Search and Rescue (SAR) operations. It is the area where the incident occurred and where the SAR teams are working to locate and rescue the victims. This term is used to describe the location of an incident and the area where the search and rescue efforts are focused.

On-scene endurance

On-scene endurance is the amount of time an asset may spend at the scene, engaged in search and rescue activities. This term is used to describe the capability of a SAR asset to remain at the scene for an extended period of time, allowing for continued search and rescue operations.

Port tack

Port tack is a sailing term used in naval and sailing terminology. It describes the situation of a vessel whose sails are trimmed for a wind which comes over her port (left) side. Although the verb to tack postulates a vessel sailing close hauled, a vessel on any point of sailing is on the port tack if the wind comes over her port side. However, if the wind is coming from abaft the beam on the port side of a fore-and-aft-rigged sailing vessel, it is sometimes said that she is on the port gybe.

Tack

A boat is on the tack corresponding to the side over which the wind blows, the side opposite to which the main boom is carried. If the wind is coming from anywhere on the port side, the boat is on port tack. A vessel on any point of sailing is on the port tack if the wind comes over her port side.

On-scene communications

On-scene communications refer to the coordination and communication efforts that take place within a specified area during a SAR operation. These include radiocommunications and SITREPs (Situation Reports). On-scene communications are essential for effective coordination of search and rescue efforts, ensuring that all involved parties are aware of the situation and can respond accordingly.

On-Scene Coordinator (=OSC)

The On-Scene Coordinator (OSC) is a person designated to coordinate search and rescue operations within a specified area. The OSC is the local contact for the SAR Co-ordinator. The OSC provides information to the resources involved on where and how to search and regularly reports progress. The OSC is usually the Commanding Officer of a government vessel with an experienced crew.

On-Scene Coordinator at Sea

The On-Scene Coordinator at Sea is responsible for coordinating SAR operations at sea, including coordinating the efforts of multiple vessels and ensuring effective communication and coordination among all involved parties. The OSC at Sea ensures that search and rescue efforts are coordinated and executed efficiently, minimizing the time required to locate and rescue the victims.

On-scene search and rescue

On-scene search and rescue activities refer to the efforts made by SAR teams to locate and rescue individuals in distress, specifically within the on-scene area. These activities may include the use of various search and rescue assets, such as boats, helicopters, and aircraft, to locate and rescue victims.

On-scene safety

On-scene safety refers to the measures taken to ensure the safety of all personnel involved in search and rescue operations. This includes ensuring the safety of the SAR teams themselves, as well as the safety of the victims being rescued. On-scene safety measures are crucial to ensuring that search and rescue operations are conducted in a manner that minimizes risk and ensures the well-being of all individuals involved.

Maintenance of machineries has to be carried out regularly. Considering the ships situation, various tools, parts and materials are required to be always available onboard. Clear and good understanding of tools, parts and materials are beneficial to engineers for proper upkeep and inventory of tools.

8.1 Maintenance Tools

8.1.1 Hand Tools

a. Hand Spanner/Wrenches

There are different types of hand spanner and wrenches that are available in the workshop which could be selected depending on the type and condition of maintenance work to be done.

Example usage of hand spanner and wrenches:

i. Adjustable wrench is used as easy tool for undetermined size of bolt and nut when immediate tightening is required.
ii. Adjustable pipe wrench is suitable for fastening/loosening small sizes threaded pipes and damage head bolt in an awkward position.
iii. Slogging spanner is used for loosening and tightening big sizes of bolts using hammer.
iv. Instead of adjustable pipe wrench, hook spanner is used for threaded cap connection with teeth to avoid damaging the cap.
v. Offset spanners are used when working in an awkward position jobs.
vi. Square drive wrench is specially used for square bolts or handle.
vii. Torque wrenches are used for a specified torque controlled tightening of bolts and nuts.

pilot briefing (n) (navig) kratki dogovor s peljarom, kratko upoznavanje
The Master and pilot on vessel A carried out a pilot briefing and the pilot had received a copy of the pilot card. There had been a short pilot briefing where the bridge team were advised that the vessel would berth starboard side at berth A which had a course of 285 degrees. It is imperative during the pilot briefing that the approach is discussed in detail with the entire bridge team, so orders can be challenged if there is concern.

The pilot card, to be filled in by the master, is intended to provide information to the pilot on boarding the ship. This information should describe the current condition of the ship, with regard to its loading, propulsion and manoeuvring equipment, and other relevant equipment. (see IMO Resolution A.601(15), the interaction sheet between vessel’s bridge team and Pilot; the pilot was given the vessel’s pilot card, which detailed its manoeuvring characteristics. The master and pilot then discussed the departure plan. The ship’s pilot card was provided to the pilot during the master/pilot information exchange (MPX). Complete the pilot card, hand over the pilot certificate, and pilot change over.

The pilot was required to hold an STCW II/2 master’s certificate in addition to their PLA pilot certificate. PLA pilots were required to hold an STCW II/2 master’s certificate in addition to their PLA pilot certificate.

(H. Baudu, p. 248) točka okretišta broda: The closer the pivot point is to the centre of the ship, the smaller the turning radius becomes. H. Baudu (2014), p. 248 When turning while the ship makes headway the pivot point may be located approximately in the ship's forward quarter. H. Baudu (2014), p. 254 In practice, if the ship is stopped, the pivot point merges with the centre of gravity at the middle of the ship. The position of the pivot point depends on a number of influences. With headway, the pivot point lies between 1/4 and 1/3 of the ship’s length from the bow, and with sternway, it lies a corresponding distance from the stern. **prop walk** (=propeller walk) *(n)* 1 *(sailing/boating/yachting)* SEE propeller walk

Prop walk occurs when a turning propeller pushes a boat’s stern sideways. (https://ab-marine.com/); asymmetric blade thrust; a propeller’s tendency to rotate about a vertical axis (also known as yaw motion). (https://en.wikipedia.org/wiki/Propeller_walk) zanos propelera: We did encounter (and frequently use to our advantage) fairly substantial propwalk. It occurs when a prop and its shaft are not perfectly parallel to the water’s surface. https://www.practical-sailor.com/ Prop walk is more pronounced when reversing as the rudder is initially less effective, but it also happens when moving forward. http://features.coastalboating.net/FeatureArticles/Propwalk/index.html
The thrust was so much that the prop wash acted as a small tsunami swamping boats and overturning piers at the marina.

The U.S. Department of Justice says 2016 was record year for prosecuting shipping companies and crew for illegal discharges from ocean-going vessels in U.S. waters. The master of the MV.... was prosecuted under section 58 of the Merchant Shipping Act 1995 following an investigation by the Maritime & Coastguard Agency.

The court ruled that, in a prosecution for violation of the Seaman’s Manslaughter Statute, the government need only prove simple negligence.
The seriousness of deficiencies varied from reporting to prosecutor, prohibition or banning to legal actions, such as injunction or order.<source>Maritime_Transport_and_Risks_of_Packaged_Dangerous_Goods</source>

### Radar Coverage

QHM Harbour Control maintains radar coverage of the Eastern Solent including the Portsmouth Harbour Approach Channel.

### Radar Detection

The third officer monitored the starboard radar display, which he switched between the 3nm and 6nm range scales. There was an ECDIS and radar display screen positioned on the navigation console in front of each bridge chair. The Master used the radar display and ECDIS for long-range scanning and traffic management. LCD radar display

radar mast (n) (navig) radarski jarbol

radar navigation (n) (navig) Radar navigation uses radar to determine the distance from or bearing of objects whose position is known. This process is separate from radar’s use as a collision avoidance system. [Bowditch 2001] radarska navigacija: Radar navigation is similar to traditional navigation in that you have to identify landmarks, measure their position relative to your own and use those measurements to establish a position on the chart. Radar fixing is often quicker than taking bearings with a magnetic compass and is a more professional technique than simply transferring a latitude and longitude from the GPS.

radar noise (n) (navig) radarske smetnje, radarski šum

**radar research** *(n) (navig)* radarsko pretraživanje, traženje radarom

**radar receiver (RX) (=Rx) (n) (navig)* radarski prijamnik, radarski prijamnik, prijamnik radara

**radar receiver - technical specifications** radarski prijamnik - tehničke osobine

- Intermediate frequency (IF) (MHz) međufrekvencija
- Short pulse kratki impuls
- Medium/Long pulse srednji/dugi impuls
- Noise figure (dB) šum prijamnika (dB)

**radar reflector** *(n) (navig)* radar reflectors are fitted to vessels or navigational buoys or other charted features to improve their reflective properties so as to make them visible to searching radar. A metal device designed for reflecting strong echoes of impinging radar signals towards their source.

A Damen Twin Fin skeg adds to the effectiveness of the design, giving the RSD Tug 2513 excellent course-keeping and predictable sailing characteristics.

Damen’s radical new ‘always bow first’ RSD Tug 2513 has reached the final stage of this year’s prestigious Maritime Award KNVTS Ship of the Year prize.

This innovative RSD tug design combines elements of tractor tugs and ASD tugs to create a new class of vessel that effectively has two bows, enabling it to always operate bow first. This makes it exceptionally efficient as it is equally effective at bow and stern assists.

This vessel has excellent seakeeping behaviour, superb manoeuvrability and outstanding towing characteristics. https://products.damen.com/en/ranges/rsd-tug/rsd-tug-2513

said to contain … (=STC)  

(prephr) (mar law, logist) “1×20' container Said To Contain 750 x 25 kg bags of Sugar”. Suppose the container reaches destination and the receiver opens the container to find there are only 700 bags instead of 750 bags as per example below, natural instinct would be to hold the shipping line responsible just because they carried the cargo. The cargo, the quantity and the weight inside the container are not known or verified by the shipping line (although the SOLAS VGM may be proof of the weight) because they are not involved in the packing of the container. Therefore the shipping line needs some protection against potential claims relating to shortage etc, so they clause the bill of lading with Said To Contain..

This is a caveat clause applied to container-shipment transport documents, indicating that the carrier has no firsthand knowledge of what was loaded in the container. 

(opaska u teretnici): “1×20' container Said To Contain 750 x 25 kg bags of Sugar” STC means the Shipping line is saying that based on the shippers declaration, the container is said to contain XYZ cargo and they haven’t verified the contents. https://www.shippingandfreightresource.com/

It’s a bit different in the sense that unlike an outboard engine or inboard/outboard (IO) set-up, the engine exhaust is not exiting the boat via the drive leg, but rather through the hull just like with a conventional drive system. *(http://www.boats.com/reviews/all-about-saildrives/#.WIEXna6nGM8)*

**S-pogon (jedrilice):**

With the saildrive, the weight of a shaft, stuffing box, and propeller are moved forward, almost under the engine. Further, the propeller’s angle of attack is more parallel to the surface of the water, which will enhance efficiency and help to minimize traditional prop-walk characteristics common to conventional drive configurations. SART

A SART is a portable battery powered radar transponder which operates on "x-band or 3 cm radar". It is a self-contained, waterproof radar transponder intended for emergency use at sea. The radar-SART is used to locate a survival craft or distressed vessel by creating a series of dots on a rescuing ship's radar display. SAR transponders (SARTs) are used for locating survivors by SAR units and their signals are also to be considered as a distress alert. The SART should normally be taken to the survival craft when abandoning a vessel.

SARTs transmit in the X-band (3 cm) radio frequency used by common aeronautical and maritime radar. The signals are detected at various distances depending on scanner height, tuning and bandwidth of the radar. sea bream (=seabream; sea-bream; sea bream) (n) 1 (fishing) = gilt-head bream

English name for marine sparid fishes. The Sparidae family is also known as porgies. These fish have certain distinctive features that make them easily identifiable. First, their bodies are relatively flat. The line from the dorsal area to the front of the fish descends very rapidly giving the face a flattened appearance, especially when viewed in profile. Their color varies widely from species to species, mainly depending on water type and environment. In brackish waters, for example, the fish tend to be darker, with shades of blacks and grays to help them blend in with the environment. Some fish, in other areas, even have a bright red appearance, showing how diverse members of the family can be.

seaway bill (=Sea Way B/L) (n) (mar law) = waybill A seaway bill is a receipt of goods issued by the ocean carrier to the customer (also called the consignor or shipper). It is a contract by which the ocean carrier undertakes to transport the customer's cargo in its vessel or vessels, from one point to the other. (https://www.marineinsight.com/maritime-law/what-is-seaway-bill-in-shipping); a type of bill of lading used for port-to-port or combined transport carriage

(http://www.maerskline.com/en-jm/help/shipping-glossary); Sea Waybills are not documents of title, so that the holder does not necessarily have ownership of the goods. Sea Waybills are increasingly used instead of Bills of Lading: they are simpler, which helps, e.g., when only short sea crossings are involved, or for regular shipments to established customers whose creditworthiness is not in doubt. Seaway bill takes the same form as B/L but is a non-negotiable receipt and not a document of title. Frequently used in the container trade. pomorski teretni list: A waybill is identical to a negotiable bill of lading except that it is not a document of title. There are no originals issued for this type of document. When a shipping document is issued to a “named” consignee and it is not a document of title, it may be considered as a “Sea Waybill“.

Sea Waybill of Lading is a NON-NEGOTIABLE & NON-TRANSFERABLE DOCUMENT.

https://shippingandfreightresource.com/cargox-blockchain-smart-bl-app/ When a shipping document is issued to a “named” consignee and it is not a document of title, it may be considered as a “Sea Waybill“.

https://shippingandfreightresource.com/cargox-blockchain-smart-bl-app/ The seaway bill is usually preferred by companies that deal directly with each other on a regular basis. A seaway bill will show a consignor and a single consignee who can receive the goods at the port of discharge.

https://www.marineinsight.com/maritime-law/what-is-seaway-bill-in-shipping A seaway bill is usually issued in triplicate – the original and second copies are given to the shipper or consignor, and the third to the consignee

https://shippingandfreightresource.com/first-shipping-line-with-100-smart-containers/ Everyone will operate much more effectively with smart containers: from the shippers themselves to ports, terminals, insurance companies, customs, and homeland security.

https://shippingandfreightresource.com/first-smart-container-innovation-lab-contopia-labs/
A smart port is an automated port that uses nascent technologies such as big data, Internet of Things (IoT), blockchain solutions and other smart technology.

The smart port of tomorrow that wants to engage trade with China is going to need an integrated and seamless technology base that will allow movement of product and containers from vessel to port to land based transport. The aim of this model is to reduce the total cost of the supply chain through optimal asset utilisation, lower inventory costs through efficient cargo management and visibility of the entire value chain from manufacture to end user.

Smart waterways, smart ports, remote piloting and the phasing-in of remotely operated and autonomous ships represent a technological breakthrough.

China's first "smart" ship embedded with a domestically-developed intelligent navigation system made its debut in Shanghai. The smart ship is installed with SOMS, a China-Developed marine system with autonomous learning ability and intelligent operation system. It can analyze real-time navigation and meteorological data, pick the best routes and alert the crew to hidden dangers in advance.

**stability change (=change in stability) (n) (stabil, nav arch) promjena stabiliteta broda:** The metacentric height of the ship changes due to flooding. This can be explained by the general expression of metacentric height: \( GM = KB + BM - KG \). The explanation of reduction in stability can be done in two ways, which is exactly what we will study in this article, but at a later stage. For now, it should suffice to understand that when a ship is flooded, it results in a change of \( KB \) and \( BM \) values. The \( KB \) rises due to flooding, and it may rise further due to change in the ship’s trim. However, there is a significant reduction in \( BM \), which is a function of the area moment of the ship’s water plane. Why? We will look into that when we study the Lost Buoyancy Analysis. Some partly submerged containers pose a threat to leisure boats and commercial shipping.

The basis of the Submerged Turret Loading system is the buoy moored to the seabed. The buoy is pulled into and secured in a mating cone in the bottom of the vessel and thus connecting the mooring system. Internal in the buoy is the turret to the mooring and riser systems. The outer buoy hull can rotate freely with the vessel around the turret by means of internal turret bearings. Oil is transferred through an in-line swivel via the loading manifold to the piping system of the vessel. Disconnected, the buoy will float in an equilibrium position ready for new connection.

switch bill of lading (=SBL) (n) (logist, mar law) SEE Original Bill of Lading

Corrections or changes to an original bill of lading calls for issuing another set with the correct details on it by way of a switch bill of lading. While some very minor alterations are endorsed on the original bill of lading itself, there may be other changes that require the issuance of a fresh set. These include changes to the port of discharge, the buyer or receiver, the description of goods to include its full details or certain specifications, or the trading terms. Any of these pre-agreed points may have changed while the goods are in transit. When any of these cases occur a fresh bill of lading is issued and therefore called a switch bill of lading.

za izdavanje za izdavanje ovakve (nove) teretnice je da se komplet / set prve teretnice poništi uz prethodnu suglasnost glavnih sudionika u poslu. drugi komplet teretnice promijenjena sadržaja, drugi set teretnice promijenjena sadržaja: Switch bills of lading may be requested (a) When there has been a change in the original trading conditions; (b) Goods have been resold (probably high-seas sale) and the discharge port has now changed to another port. © The seller (who could be an intending agent) does not wish the name of the actual exporter to be known to the consignee in case the consignee strikes a deal with the exporter directly. A switch bill of lading can be issued anytime once the cargo has left its port of origin, but before it is handed over to the original receiver. Once the switch bill of lading is issued, the first set ceases to be part of the shipping documents of the particular consignment. The most important thing here is that there can never be two different sets of bills of lading for the same cargo. There may be perfectly legitimate reasons behind a request for switch bills of lading, for example that there has been a change in the consignee's logistic plans so that the goods must be delivered at another port than first envisaged.

time charter (n) (mar law) A time charterer (TC) is an arrangement where the charterer is given operational control for the cargo-holding vessel, while leaving management in control of the ship owner.

Under TC (time charter) contracts, vessels are hired for a specific period at a pre-decided daily rate. In the Time Charter the charterer is usually responsible for bunkers, port charges, canal tolls and any crew overtime connected with the cargo. The charter rate (hire) is quoted in terms of a cost per month per deadweight ton. www.euronav.com trip time charter The trip time charter is for one voyage, or a very short period of time. Trip charter rates are therefore also spot rates, but in contrast to the voyage charter the payment is made on a $/day basis, hence reducing risk for the ship owner in the occurrence of delay outside of port.

TSS (=traffic separation scheme) (n) (navig) = Traffic Separation Scheme A method of regulating the flow of vessel traffic moving in different directions. The term is defined by the International Maritime Organization (IMO) in its Resolution A/284 of November 20, 1973, as a scheme which separates traffic proceeding in opposite or nearly opposite directions, by the use of a separation zone or line, traffic lanes, or by other means. Today, traffic separation schemes are often part of Vessel Traffic Services (V.T.S.), in ports or restricted coastal areas; A zone or line separating the traffic lanes in which ships are proceeding in opposite or nearly opposite directions; or separating a traffic lane from the adjacent sea area; or separating traffic lanes designated for particular classes of ship proceeding in the same direction. During a short sea passage on a twin-engined ship, a motorman was cleaning around the turbo blower of one of the main engines. Turbochargers of Marine Engines are important part of the system as they utilise the waste heat of the exhaust in order to supply charge air for scavenging of the engine. The equipment consists of turbine and blower attached on the same shaft.

Cleaning of the Turbine side and blower side is carried out at regular interval of time to remove carbon, soot, and other exhaust deposits.

If the blower side cleaning is not carried out properly, then the supply of air to engine will be reduced, resulting in lack of air and improper combustion with black smoke. The Blower side of turbocharger is cleaned by fresh water. The engine is run at its full load rpm to achieve best possible

Vessel Traffic Service (=VTS; vessel traffic services) (n) (navig, safety) Vessel traffic services deal with managing ship traffic on marine routes, suggesting best routes for a vessel and ensuring no two vessels run into each other on congested routes. (https://www.marineinsight.com/marine-navigation/what-are-vessel-traffic-services/); Vessel traffic services - VTS - are shore-side systems which range from the provision of simple information messages to ships, such as position of other traffic or meteorological hazard warnings, to extensive management of traffic within a port or waterway. (http://www.imo.org/en/ourwork/safety/navigation/pages/vesseltrafficservices.aspx) Služba nadzora pomorske plovidbe, služba nadzora plovidbe, kontrola i vođenje plovidbe (u kanalima, lukama itd.), služba VTS: About 30 seconds before the collision Vessel Traffic Services (VTS) intervened to warn both vessels that they were running into danger but no response was received. The most commonly used sensing components of vessel traffic services are: 1. Radar system; 2. AIS; 3. Radio direction finder The purpose of a Vessel Traffic Service (VTS) is to provide active monitoring and navigational advice for vessels in particularly confined and busy waterways. There are two main types of VTS, surveilled and non-surveilled. Surveilled systems consist of one or more land-based sensors (i.e. radar, AIS and closed circuit television sites), which output their signals to a central location where operators monitor and manage vessel traffic movement. Non-surveilled systems consist of one or more reporting points at which ships are required to report their identity, course, speed, and other data to the monitoring authority. https://www.navcen.uscg.gov/?pageName=vtsMain

Vessel Traffic Services and Reporting Systems (n) (safety) Organizations that manage vessel traffic services and/or vessel traffic reporting systems are capable of providing, to varying degrees, information about participating vessels (location, construction, cargo, etc.) that may be of use in resolving a SAR incident. Victory ship COMPARE Liberty ship an emergency fast cargo vessels to replace the slower Liberty ships in World War II tereti brod tipa Victory (za prijevoz u konvojima u II. svjetskom ratu): On April 28, 1943, the new ships were given the name Victory and designated the VC2 type (V for Victory type, C for cargo, and 2 for a medium sized ship between 400 and 450 feet long at the waterline). The Victories could carry 10,850 deadweight tons (the weight of cargo a ship can carry) or 4,555 net tons (the amount of space available for cargo and passengers), a larger load than the Liberties could manage. Victory ships typically carried a crew of 62 civilian merchant sailors and 28 naval personnel to operate defensive guns and communications equipment. The Victory ships were different from the Liberty ships primarily in propulsion, the steam engine of the Liberty giving way to the more modern, faster steam turbine. The Victory ships had engines producing between 5,500 to 8,500 horsepower. Their cruising speed was 15-17 knots (approximately 18.5 miles per hour).

Waybill /'wei,bil/ (n) (mar law, shipping econ) A waybill is a non-negotiable receipt issued after receipt of the goods by the carrier. It is clearly marked non-negotiable. It is usually employed in the container trade for normal shipments with consent of the shipper who does not insist on being issued a negotiable bill of lading. It is not a document of title, so that delivery of the goods shipped is made, not by presentation of a document, but by the consignee nominated on the waybill identifying himself. Only one original waybill is usually issued to the shipper. Although it is not a document of title, it is a contract of carriage.

The document used to identify the shipper and consignee, present the routing, describe the goods, present the applicable rate, show the weight of the shipment, and make other useful information notations.

A document prepared by a transportation line at the point of a shipment; shows the point of origin, destination, route, consignor, consignee, description of shipment and amount charged for the transportation service.

The rates listed in the table are designated as Worldscale Flat or WS100 and are revised annually. (http://www.clarksons.com/glossary/); Worldscale is a nominal worldwide tanker scale used to establish payment of freight services; Nominal freight scale applying to the carriage of oil and oil products in bulk by sea. An international freight index for tankers that provides a method of calculating the freight applicable to transporting oil by reference to a Standard Vessel on a round trip voyage from one or several load ports to one or several discharge ports. (www.worldscale.co.uk) međunarodni indeks tankerskih vozarina, međunarodna tablica tankerskih vozarina,

**Worldscale**: The flat rate point 100 is effectively the breakeven point in accordance with the basis of calculation for the Worldscale Standard vessel but not for any other size. Worldscale includes expenses associated with ports, transit fees, port and voyage time and vessel bunker costs assessed in relation to the Worldscale Standard Vessel basis of calculation in order to produce a comparative nominal freight scale reported in dollars per tonne. Worldscale is used to calculate freight rates for oil tankers and product carriers. It is a tanker chartering tool, its principle is to provide the ship-owner with the same net return per day irrespective of voyage performed for the Worldscale Standard Vessel at WS100. Worldscale rates vozarinski stavovi izračunani prema tablici Worldscale:

**Worldscale Rates** are based upon a 75,000 tonne total capacity vessel performing a round voyage and expressed in dollars per tonne of cargo. Any new Worldscale rate request will require mileage calculations, any voyage costs and port cost information. Rate calculations may involve several different route options to determine the cheapest. The final rate agreed will be determined as a percentage of the 'Worldscale' rate, based upon a guaranteed minimum quantity of cargo. This allows for charter parties to cover a wide range of possible voyage options without the need to calculate and negotiate each one separately. www.euronav.com
The goal of the World Shipping Council (WSC) is to provide a coordinated voice for the liner shipping industry. The WSC and its member companies partner with governments and other stakeholders to collaborate on actionable solutions for some of the world’s most challenging transportation problems.

According to a recent report by the World Shipping Council, on average a total of 1.382 containers lost at sea every year. World Shipping Council members operate approximately 90 percent of the global liner ship capacity, providing approximately 400 regularly scheduled services linking the continents of the world. The WSC is a leading shipowner voice representing all of the world’s major container carriers.

Worldwide Navigational Warning Service (WWNWS), a global navigational warning system, is coordinated to alert and inform the shipping community of any potential hazards to navigation. It is a global radio-navigation system (WWRNS) that provides critical information to mariners at sea.

Worm refers to a marine gear, a type of transmission, or a fishing crv. Wormwheel is the toothed wheel of a worm gear.
