**Uređaj za proizvodnju slatke vode, destilator:** The fresh water generator (or evaporator) uses the heat from the main engines in the cooling water to produce fresh water from sea water. A fresh water generator (FWG) which is used to produce fresh water from sea water is also incorporated.

**Generator / dženereta*/ *(n)* *(electr)* **Električni generator, generator, generator struje:** Diesel gensets have even been installed in containers on deck to provide propulsive power, and other vessels equipped with a 10 000 kW generator mounted in a block at the stern above the RoRo deck. The economic attraction of the main engine-driven generator for electrical power supplies at sea is that it exploits the high thermal efficiency, low specific fuel consumption and low grade fuel-burning. The electrical power is supplied from the generators to the main switchboard from where it is distributed to all parts of the ship through numerous breakers and relays. There are normally three generators, one running and supplying power, one on standby, and one down for maintenance whilst at sea. He then, started No.2 generator and transferred vessel’s electrical load from shaft alternator on to No.2 generator and prepared the dredging pump which would be powered by the shaft alternator. The electrically driven compensator will not give rise to distorting stresses in the hull, but it is more expensive than the engine-mounted compensators. The actions of other vessels gave rise to concern. The total stress level is high and varies with time, giving rise to the risk of fatigue. I believe watch officers ought to call the master before using the VHF for close quarters or collision avoidance as it can give rise to doubts and misunderstandings and can be a distraction.

GNSS (Global Navigational Safety System) is a constellation of satellites providing signals from space that transmit positioning and timing data to GNSS receivers. The receivers then use this data to determine location. (https://www.gsa.europa.eu/european-gnss/what-gnss)

**Components**

- **GNSS (-Components)**
  - **User segment**: The user segment consists of the equipment used by the user, including the receiver, antenna, and any additional components. This part of the system is responsible for receiving the signals from the satellites and decoding them to determine the user's position.
  - **Control segment**: The control segment of the system includes the control centers and the algorithms that ensure the continuous tracking and calculation of the user's position and velocity with a certain level of accuracy and quality control.
  - **Satellite or space segment**: This is the part of the system that encompasses the constellation of satellites or other space-based components that are responsible for transmitting the signals to the user segment.
GNSS Receivers are the core product for satellite positioning. They convert signals from visible satellites into a position on earth. The amount of visible satellites is dependent on the number of constellations the receiver is compatible with, such as GPS, Glonass, Galileo and Beidou. (https://geomatching.com/gnss-receivers); GNSS receivers determine the user position, velocity, and precise time (PVT) by processing the signals broadcasted by satellites. Because the satellites are always in motion, the receiver has to continuously acquire and track the signals from the satellites in view, in order to compute an uninterrupted solution, as desired in most applications. Any navigation solution provided by a GNSS receiver is based on the computation of its distance to a set of satellites, by means of extracting the propagation time of the incoming signals travelling through space at the speed of light, according to the satellite and receiver local clocks. This time difference is transformed into a fake range, the "pseudorange", by multiplying it by the speed of the light in the vacuum, \( R = c \times dt \). The pseudorange might be seen as a very rough estimate of the true range between satellite and user, and
GNSS - ship's system / equipment: Plotter, Course, Highway, Data and Integrity

has to be corrected to account for a number of phenomena before it can be interpreted as a precise measurement of the true distance.

The ship’s system consists of a fully integrated receiver with a coloured videoplotter, display unit, antenna unit and software.

gybe /dʒaib/ (=gibe; jibe) (n) (sailing/boating/yachting) kruženje, manovra
The yacht did an emergency gybe to run off in a SSE direction. During a gybe crews need to maintain an awareness of the risk of injury from being hit by the mainsheet, and the mainsheet fine tuning blocks where these are fitted. The yacht quickly came round to starboard and continued into a rapid and uncontrolled gybe until the boat settled close to head to wind. At about 300 yards I executed a 360° buttonhook to starboard, crash jibe, flapping sails and all. A jibe can be dangerous in a fore-and-aft rigged boat because the sails are always fully filled by wind during the maneuver.

The anchor party, comprising the third officer, bosun and one AB, could not fully house the anchor in the hawsepipe, as a twist in the cable between the gypsy and the guide roller prevented the anchor from orientating properly. The plan was to temporarily take the weight of the anchor on its lashing (wire sling) by ‘walking back’ the windlass in gear, and then rotate the slack chain between gypsy wheel and the guide roller to remove the twist;

**berthed head-in** brod vezan pramčani prema kopnu (uz obalu u luci, riječnu obalu): Our handy-size, multi-purpose vessel was **berthed head-in**, starboard side to and had already singled up with pilot on board.

**heading** /ˈhediŋ/ *(n)* *(navig)* COMPARE course: The horizontal direction the vessel's bows at a given moment measured in degrees clockwise from north *(SMCP)*; The horizontal direction in which a craft is pointed. *(IAMSAR)* **pramčani kut** *(u odnosu na pravi sjever)*, **promijeniti pramčani kut**: By that time, tanker’s heading had been altered to 227° and the bulk carrier was 79° abaft tanker’s starboard beam at a distance of 1.7nm. he assessed the fishing vessels’ aspects from their navigation lights and altered the autopilot heading about 10° to port to pass ahead of them. The Master was called, speed reduced to minimum and heading altered into the sea and swell.

**follow a heading** ploviti u smjeru ...: The vessel was following an autopilot-controlled **heading** of 221° at a speed over the ground *(SOG)* of 11.9 knots *(kts)*, **adjust a heading** namjestiti pramčani kut, namjjestiti pramčanicu: The deck officer **adjusted the vessel’s heading** set on the autopilot to 130° to follow the revised track, **What is your heading?** ... **My heading is one - two - eight degrees. Koji je Vaš kurs? ... Moj kurs je jedan - dva - osam stupnjeva., on a heading of na pramčanom kutu od ...**: The vessel passed abeam of the charted rocks at a speed of approximately six knots and on a **heading** of nearly 227° T. The wind was NW 25 knots and the vessel was **on a heading 335degrees**. At 1607, the vessel was **on an easterly heading** with a **SOG** of 10.6 kts., **on a reciprocal heading** na suprotnoj pramčanici: We continued to turn hard a starboard and main engine full ahead until we were steaming away from the other vessel on a **reciprocal heading** and the other vessel was well clear.
But the tanker continued on her original heading and a close-quarters situation was quickly developing. The skipper found that the autopilot had difficulty in keeping the vessel on a steady heading. The traffic lanes trend west-northwest to east-southeast, while the heading display for this ship indicated it was heading northeast at about 14 knots. This allowed the trawler to veer from her heading until she came to an abrupt stop against a rock. As the vessel entered a narrow part of the channel, the pilot requested a slight change of heading to port. He then adjusted the ship’s heading to aim toward the centre of the channel and the bright harbour lights ahead.

The vessel's bridge team could not detect the change in Vessel A's heading and speed.

In most cases when mooring ropes part they cause head injury. The victim was wearing a safety helmet which probably helped prevent a head injury.

The radar cannot see through the headland so anything behind the headland will be hidden in the radar’s shadow area. An inbound passenger ferry was rounding a headland and approaching her final waypoint, at which point the passage plan required her to alter course to port and head towards the harbour approaches.

He also chose this position because it was in the lee of a prominent headland and it was outside the main tidal stream.

As the ship' port list increased, **hydraulic power** was lost, resulting in band brakes on the automatic trawl winch system activating.
**Hydraulic Electronic Unit Injector** (=REVI) *(marine eng)* An electronically controlled injector that uses hydraulic pressure acting on an intensifier mechanism to produce fuel injection pressure. (http://www.marinedieseleurope.com/)

**hydraulic grab** *(cargo handling)* hidraulička grabilica: In executing this task, the upper end of pipe, which was lying alongside, was grasped by the heavy crane by means of a hydraulic grab and raised on one side.

**hydraulic jack** *(marine eng)* hidraulički pritezni uređaj (za vijke): Again the hydraulic jack was pumped to approximately 250 bar pressure, the pin was struck again and the deflected maul landed heavily on the leading seaman’s right hand. There are four bolts at each connection point which help for assembly and removal of the connecting rod, and are tightened to their required torque using hydraulic jack. Extracting the sheave pin appears to be in order, the risk assessment must consider the possibility of two more hazards when applying tension with the hydraulic jack; 1) the rod coming off the the pin due to corroded / wasted threads, and, 2) the threaded rod fracturing, especially if not of approved strength. Therefore, most of the important or big screws are tightened hydraulically on ships such as cylinder head nuts, exhaust valve nuts, for crank pin bearing, cross head bearing, main bearing, tie bolts, etc. (http://marineengineeringonline.com/an-introduction-to-hydraulic-jacks-on-ships/)

Any leakage of fuel, lubricating and hydraulic oil should be disposed of in accordance with Oil Pollution Regulations at the earliest opportunity. During this operation, a flexible hose on the crane came adrift from its coupling and hydraulic oil under high pressure sprayed out, some of it entering the bosun’s eyes. hydraulic oil leakage curenje hidrauličkog ulja, puštanje hifrauličkog ulja: Over the years, the steering rams had suffered from hydraulic oil leakage, and the hydraulic oil reservoir and header tank had been regularly topped to cope with the loss of oil.
The crew were called, and the engineer went to the engine room to start the hydraulics ready for hauling. The skipper tried the main engine stop button, but this did not work either, so he reduced engine speed and engaged the hydraulics to try and stall the engine.

It is important that bridge teams consider the hydrodynamic effects their vessels are subject to while navigating and manoeuvring in narrows such as the St. Lawrence Seaway. I recently travelled from Sicily to Stromboli and back again using one catamaran and two separate hydrofoil passenger vessels for different legs of the journey. Hydrofoilins reduce the drag of the vessel by a factor of two. The ship’s powering requirements are also halved, which increases the speed and range of what an electric ferry can do. Hydrofoil technology is the key to enabling electrification of passenger ferries. Hydrogen is one of the potentially zero-carbon fuels that is
being considered for use in marine applications of the future. (https://safety4sea.com/) hydrogen fuel cell vessel

vodik: Sulphamic acid will liberate hydrogen gas as it attacks scale and steel and the work site must be tested for the presence of hydrogen after the cleaning operation. Carbon yields 8080 kcal/kg when completely burned, hydrogen 34 000 kcal/kg; oxy- gen is assumed to be already attached to its proportion of hydrogen: that is, an amount of hydrogen equal to one-eighth t

vodikov klorid: Freons decompose producing hydrogen chloride, hydrogen fluoride, phosgene, and chlorine.

vodikov peroksid: The chief officer quickly identified the contents of the tank as hydrogen peroxide, and consulted the appropriate substance information sheet on the ship’s dangerous cargo database.

vodikov sulfid: This unusual property of hydrogen sulphide makes it extremely dangerous to rely totally on the sense of smell to warn of the presence of the gas.

vodik: The cost of hydrogen bunkering facilities is expected to be higher than that of LNG facilities

All four were taken off by the inshore lifeboat, and taken to hospital suffering from mild hypothermia. It also increases susceptibility to hypothermia and reduces the chances of survival in cold water. The 7-man crew were then airlifted to hospital and treated for hypothermia and shock. The helicopter had a task to airlift the casualty to hospital as a further precaution against secondary drowning or hypothermia. The sailors had either succumbed to hypothermia or drowned. ignite /ˈɡnaiət/ (v) (marine eng, safety) zapaliti( se), upaliti se (motor): The compressed air from the bottle is necessary to ignite the fuel. The starboard cargo engine (its lever left in the ON position) must have developed high pressure in the cylinder causing the safety valve to crack open and ignite the flammable gases in the engine room. If the impact had been more direct, the steel plate could have pierced the tank, and also provided the energy to ignite the flammable mixture of fuel vapour and air which would have formed within the truck's empty tanks. The cargo was liable to self-heat and ignite spontaneously because it contained fine shavings contaminated with cutting oil, cast iron borings and organic flammable materials. Unfortunately, the junior engineer succeeded in his attempt to ignite the boiler and the residual fuel ignited explosively.

ignition /ˈɡnɪʃən/ (n) (marine eng) paljenje, zapaljenje: Better still, the electrodes should have been bench tested away from all sources of ignition. The source of heat for ignition comes from piston blowby, slow ignition and afterburning, or excessive exhaust back pressure, which causes a blowback through the scavenger ports. The engine room fire was probably caused by the ignition of lubricating oil that sprayed from a fatigue-fractured fitting on one of the main engine's pre-lubrication oil pumps onto the hot surface of the main engine's exhaust manifold. spontaneous ignition samozapaljenje, ignition system uređaj za paljenje, ignition timing tempiranje paljenja, ignition switch prekidač paljenja, ignition control upravljanje paljenja, ignition temperature temperatura paljenja: The ignition temperature for this type of oil mist can be extremely low, depending on the type of oil being atomized. ignition delay zakašnjelo paljenje, odgođeno paljenje: High-aromaticity fuels cause increased ignition delay in some cases.

ignition pressure tlak paljenja: The air-blast pressure, which was only just slightly above the ignition pressure in the cylinder, was produced by a water-cooled compressor driven off the engine connecting rod by means of a rocking lever. ignition system sustav paljenja: Once the ignition system was reassembled, it was tried again; but still to no avail. It was then decided to test for a spark at the end of the electrodes. activate ignition aktivirati paljenje: As the ignition was activated and the fuel sprayed from the open ended pipe, a fire erupted, ...; cause ignition prouzročiti paljenje, izazvati paljenje, dovesti do paljenja: Possible heat sources causing ignition include heat exchangers, exhaust pipes, turbochargers, electrical contacts, static electricity and faulty wiring. source of ignition izvor paljenja, uzrok paljenja: The source of ignition for these explosions can be attributed to one of the following: - A leaking air start valve.
**Ignition quality** *kvalitet paljenja*: Damage due to *poor ignition quality* fuel can be prevented by injection control (pre-injection), spontaneous *sponrtano zapaljenje*,

**Samozapaljenje**: The lack of an effective guard allowed fuel to spray onto the adjacent turbocharger and/or exhaust piping causing spontaneous ignition, lead to ignition *dovesti do paljenja* / zapaljenje*. The low spontaneous ignition temperature of the liquid fuel leads first to ignition of the diesel fuel and then to ignition of the air–gas mixture, self-ignition

**Samozapaljenje**: To prevent the risk of self-ignition, the following precautions should be taken as laid out in the Code of Safe Practice for Solid Bulk Cargo 2004. ... and a fine spray of hydraulic oil began falling on the hot surfaces on the top of the exhaust manifold and ignited after attaining self-ignition temperature.

impose (v) (mar law, marine eng) nametnuti: The cylinder conditions in the latest designs of low-speed crosshead engines impose a higher maximum pressure, higher mean effective pressure and higher cycle temperature than those of previous generations. Finally, inadvertent over-tightening of gangway (and lifeboat) wire falls during stowage can impose excessive loads for long periods on the system. Each and every word on the vessel's port papers is checked to find any flaws, so as to be able to impose heavy fines ... Subsequently, during a PSC inspection, the PSC official noted this open valve, which was in contravention of local regulations and imposed a penalty on the vessel. Such legal requirements are probably years away from being imposed, but there can be little doubt that such a move would be in the interests of good practice. It is admitted that, in spite of the constraints imposed by the regulations of the port, ship's personnel failed to carry out a Can-thumping test as per Code of Safe Practice for Solid Bulk Cargoes section .. impose a ban (on) (mar law) uvesti zabranu: I brought the matter up in the safety meeting and have imposed an official ban on the use of the mobile phones on the navigating bridge while the ship is at sea ..; impose radio silence (comm) narediti radio-šutnju: The distress traffic controlling station/other stations may impose radio silence on any interfering stations by using the term “Seelonce Mayday/Distress”, unless the latter have messages about the distress.

in accordance with (prep phr) u skladu s: Maintenance systems should be designed and followed to ensure that watertight doors are maintained in accordance with manufacturers’ instructions, and in accordance with good standard marine engineering practice. Ten minutes before transit, own ship altered course to 090 in accordance with the passage plan, in order to pass between beacons. Earlier, at about 23:30 hours, I had encountered a head-on vessel and, in accordance with Colregs, I altered our original course from 259 degrees to a new course of 285 degrees in order to pass the other at a safe distance. Reduction in speed from full speed to the recognised manoeuvring speed is to be as gradual as possible and in accordance with the manufacturer’s instructions. Two tugs were assisting, one was made fast on the port quarter and the other was standing by forward to assist in accordance with pilot’s orders.
Hence, he lacked an understanding that his was a stand-on vessel in a crossing situation and was therefore expected to maintain course and speed in accordance with Rule 17(a) (i) of the COLREGs. The clearance must be set in accordance with the temperature of the engine. Check that all non-cargo lifting appliances on board have been identified and recorded in accordance with national regulations. In accordance with the pre-arrival schedule and loading plan, extra ballast was being pumped out.

**inaccuracy** (n) nepreciznost, manja netočnost: To keep measurement inaccuracies to a minimum, standard procedures should be adopted by the ship's crew when measuring cargo and calibrating equipment. Despite the fact that the master had 12-years experience as master mariner, in this case he demonstrated inaccuracy in visual range finding abilities and estimation of own ship speed as well as possible unawareness of ship's inertia characteristics. *remain inactive* ne aktivirati se, mirovati, ostati neaktivn: The method of navigation employed was unconventional, provided little stimulation to the watchkeeper and allowed him to remain inactive for prolonged periods of time.

**inadequate** (adj) neodgovarajući, neprikladan: ... a hazardous condition was found but the repair was grossly inadequate and did not eliminate the unsafe condition. Inadequate assessment of needs and risks; He came to the engine room and observed that all the sea water pumps were showing inadequate discharge pressure. The securing of these drums was evidently inadequate for the intended purpose: either the lashings used or their securing points were not capable of restraining the oil drums or were poorly adjusted/secured. An accident can be defined as an unexpected hazardous occurrence caused by unsafe practices that arise from inadequate knowledge, improper training, and failure to follow proper procedures, and usually resulting in loss of life or injury to personnel, damage to property etc. The events leading to the capsize were a mix of complacency, poor shipboard procedures and inadequate leadership, both afloat and ashore. The root cause of the accident was the failure of the pilot ladder due to inadequate maintenance and inspection. The fact that the boats involved in the collision were not carrying radios to communicate their predicament demonstrated the inadequate planning for the passage. Inadequate risk assessment and work planning, position of high sea suction and changes to draughts not adequately considered. Inadequate securing of items, cargo nets not used in conjunction with pallets. Improper motivation arising from complacency, inadequate supervision, operating without authority and defective equipment also contributed to the error chain. neefikasno motrenje: Ineffective lookout and failure to take independent action to avoid collision on the part of the crossing vessel.

inefficient (adj) 1 nedjelotvoran, neefikasan: However, inefficient scavenging and other losses, reduce the power advantage to about 1.8. The maintenance was considered necessary because the burner unit was emitting excessive black smoke – a sure sign of inefficient combustion. render inefficient učiniti neefikasnim; 2 bezuspješan

inert (v) (cargo handling, safety) inertirati (prazan prostor u tanku): ... chemical tankers have nitrogen plants capable of supplying large amounts of N2 but I am not sure if this is sufficient or of high enough quality to inert all tanks for all cargoes carried that have a low flash point. How to carry out inerting, paging, and gas freeing?

inert gas (=IG) (n) (cargo handling, safety) A gas such as carbon dioxide or nitrogen that is used to make an oxygen deficient atmosphere. Inerted tanks are useful for preserving cargo integrity and reducing the explosive potential of cargo tanks.

https://officerofthewatch.com/tools/maritime-dictionary/, An inert gas is one which has little or no ability to react with other gases, or to heat (e.g. nitrogen and CO2) (www.euronav.com) inertni plin: Carriage is only permitted under an inert gas blanket; The ventilation from an IG (inert gas) blower was on but the IG inlet was opened on all cargo tanks. During the stoppage, tank pressures rose significantly probably as a result of the unsaturated ullage space containing mainly inert gas; During this period, due to very high ambient temperature, No 2P COT pressure relief valve opened, releasing inert gas (IG)/cargo vapour mixture to the atmosphere, in breach of the applicable Annex 6 of Marpol. Prior to berthing, the tank inert gas pressures had been reduced to 70 mm WG; 4. The inert gas is used to blanket the oil cargo during discharging operations.

inert gas inlet (n) (cargo handling, safety) ulaz inertnog plina close the inert gas inlets zatvoriti ulaze inertnog plina

inert gas plant (n) (marine eng, safety) uređaj inertnog plina: The inert gas (IG) plant was in operation. so was equipped with a nitrogen gas plant, it was practice to use nitrogen as much as possible for inerting in order to avoid soot generated from the inert gas plant entering the tanks.

inert gas system (=IGS) (n) (cargo handling, safety) sustav inertnog plina, sustav za inertiranje atmosfere: Line clearance was undertaken for a 45-minute period during which the inert gas system (IGS) was not run.

inertia /ɪnˈʃerə/ (n) inercija, tromost: The first-order inertia force from the lower piston is balanced against the corresponding force from the upper pistons, and a well-balanced engine is obtained. In this case he demonstrated inaccuracy in visual range finding abilities and estimation of own ship speed as well as possible unawareness of ship’s inertia characteristics. The inertia force originate from the unbalanced rotating and reciprocating masses of the engine create unbalanced external moments although the exit The crank also has to absorb the inertia loading due to the conrods and pistons, which easily amounts to several tons on each cylinder. A more robust rod pin end enhances the durability required for the increased piston speeds and higher inertia loads.

inertial navigation (n) (navig) a navigation aid that uses a computer, motion sensors (accelerometers) and rotation sensors (gyroscopes) to continuously calculate via dead reckoning the position, orientation, and velocity (direction and speed of movement) of a moving object without the need for external references. It is used on vehicles such as ships, aircraft, submarines, guided missiles, and
inerting (n) (safety, cargo handling) A procedure used to reduce the oxygen content of a vessel's cargo spaces to 8 percent or less by volume by introducing an "inert" gas blanket such as nitrogen or carbon dioxide or a mixture of gases such as flue gas. (www.euronav.com) inertiranje

**injection period** (n) (marine eng) trajanje ubrizgavanja (u stupnjevima okretanja koljenčastog vratila), period ubrizgavanja (u stupnjevima okretanja koljenčastog vratila): The time, measured in degrees of crankshaft rotation, between the beginning and end of injection ( injection pump (n) (marine eng) A high-variable-pressure pump delivering fuel into the
injection system \( (n) \) (marine eng) uređaj za ubrizgavanje: The nozzle is the interface between the injection system and the combustion process: good nozzle performance is essential for good combustion. Two electrically driven pumps installed at the front end of the engine provide hydraulic power for the injection system.

injection timing \( (n) \) (marine eng) reguliranje vremena ubrizgavanja, faza ubrizgavanja, tempiranje ubrizgavanja: The cetane number or diesel index will determine injection timing and also influences the combustion noise and production of black smoke. Fuel injection timing can be freely adjusted independently of the injected quantity, Higher NOx emissions were neutralized by slightly delayed injection timing.

injection valve \( (n) \) (marine eng) ventil za ubrizgavanje: Each cylinder is individually served by a fuel injection pump, HP pipe and injection valve with uncooled nozzle. The pilot fuel system is a common rail (CR) system with one engine-mounted high-pressure pump supplying the pilot fuel to every injection valve at a constant pressure of 900 bar.

injector /ˈɪnʤektr/ \( (n) \) (marine eng) ubrizgač, raspršivač, rasprskač: The in-line six-cylinder model benefited from an upgraded fuel injection pump and a new injector as well as a new charge-air cooling system, which reduces the inlet air temperature by around 10°C ... Further upward movement of the plunger causes the fuel to be raised in pressure and expelled through the delivery valve to the injector. . injector nozzle mlaznica ubrizgača: The fuel flows at high velocity through small holes in the injector nozzle causing it to divide up into fine spray which penetrates throughout the combustion chamber, injector needle valve igličasti ventil ubrizgača: ... the injector has to snap open when the timed HP wave from the pump travelling along the HP pipe has reached the injector needle valve, injector cam brijeg ubrizgača (na bregastom vratilu / osovini), ekscentar za ubrizgač (na bregastom vratilu / osovini): The camshaft contains the exhaust valve cams as well as the unit injector cams, worn injector

\textbf{insulate} \textit{(v)} izolirati: One solution is to \textit{insulate the outside of the liner} so that there was a reduction in the cooling effect. Check that all \textit{exhaust pipes on their vessels are fully insulated} and do not come close to combustible material. The electric cables \textit{were not insulated properly}.
The cargo should be insulated from sources of heat due to vessel operations.

The MAIB has concluded that the most likely cause of the fire on board the ship was the poorly insulated hot exhaust pipe igniting the plywood structure of the vessel.

The cargo should be insulated to reduce the effect of external temperatures on the cargo.

The insulation was observed to be zero cable insulation, heat transfer to the other side of bulkheads/decks, and the possible release of gas from nearby gas bottles.

The insulation and leakage containment cover over the fuel line had not been renewed/refitted. The engine re-started when the insulation burnt through on the start electrics, which connected the start circuits.

Insurance is a means of protection against loss, whereby the cost of the loss, which would otherwise fall upon the owners, is taken over by the insurer.

The shipowner could gain by having his ship in class be obtaining more favourable insurance rates and better chartering arrangements.

These recommendations are meant more particularly for:

- shipbuilders,
- classification societies,
- shipowners and the organizations which represent them,
- shippers and insurance brokers.

The marine insurance broker is the professional intermediary and is the agent for the assured. Hull and machinery cover is often arranged and placed in the insurance market by a professional insurance broker.

Advantages of groupage include less packing: lower insurance premiums; usually quicker transits; less risk of damage and pilferage; and lower rates when compared with such cargo being despatched as an individual shipment. When a shipowner buys a ship, or needs to renew his annual insurance premium, or a cargo owner requires to have his goods insured for the forthcoming voyage, he usually asks his broker to find insurance cover. During the race, the weather rapidly deteriorated and just before midnight the skipper, who was tethered to a jackline, fell overboard while working on the foredeck. Jacklines must be tied off sufficiently to provide complete security. PS offers recommends that jacklines ideally be installed so that a sailor who is clipped in can’t go over the side. Jacklines and fixed points for clipping in should be oriented so that it is nearly impossible for you to go overboard while clipped in. They should be consistent with the tether maker’s guidance for use with their safety tethers. https://www.practical-sailor.com

**LCL** /ˈɛl sɪl/ (=Less than container load) **(n)** (mar law, shipping econ) **COMPARE** F.C.L. = less than container load Less than Container Load – this is when the same container is used for cargoes belonging to multiple shippers and consignees. The clients deliver their cargo to the lines packing station (CFS – Container Freight Station) and the line then packs the delivered cargo on behalf of the client. LCL is one of the Container Service Types in shipping. (https://www.shippingandfreightresource.com/); Less than Container Load refers to the freight forwarders shipping product where cargo from multiple customers is consolidated into one standard marine container. (https://www.transporteca.com/lcl-less-container-load/); Here the carrier takes the goods from two or more shippers, packs them into the container and seals it.

http://www.mindserpent.com/American_History/reference/Tetley_admiralty/Tetley_2004.htm; Common term for an amount of goods to be shipped and which do not fill an entire container (http://www.maerskline.com/en-jm/help/shipping-glossary); Cargo failing to qualify for freight rates given to a standard shipping container due to insufficient quantity or weight. (http://thelawdictionary.org/less-than-container-load-lcl/); Consignment of cargo, which is insufficient to fill a shipping container. It is grouped with other consignment for the same destination in a container at a container freight station. (http://www.leewardcorp.com/es/); Consignment of cargo, which is insufficient to fill a shipping container. It is grouped with other consignment for the same destination in a container at a container freight station http://www.tkmglobal.net/chartering_L.HTM; LCL (less than container load) is a mode of shipping via ocean. If you don't have enough cargo to fill up an entire container, consider shipping LCL. (https://www.flexport.com/glossary/less-than-container-load/)

**zbirni kontejner** (kontejner s robom koja glasi n primatelja): Ocean rates for LCL are commonly higher on a per-unit basis than for a full container load. Thus, consolidation of several LCL loads from different places or shippers into a full container can save on costs. **Less than Container Load (LCL)** is a service offered by freight forwarding companies, allowing shippers to book only part of a container. The smallest standard marine container carries a volume of 33 cubic metres or a weight of 28 tons – so an LCL service should be considered for any shipment considerably smaller than this. With an **LCL shipment**, you pay for your load to be shipped in a container with one or more loads from other customers of the freight transport provider. LCL lets you ship in smaller volumes so that you can keep your inventory lean. Instead of purchasing large quantities from suppliers, you can use LCL to keep a steady flow of inventory in smaller quantities. That frees up cash flow for other purchases. When an **FCL shipment** arrives at port, it’s unloaded from the vessel and delivered to the buyer. It’s more complicated for LCL: someone has to consolidate different shipments, process multiple documents per container, and then sort goods for each customer (https://www.flexport.com/learn/ship-by-lcl-or-fcl/) in the case of **LCL shipments**, the shipping line operates the container and therefore, is responsible to off load the contents of the container at their CFS. https://shippingandfreight.academy/ (the term refers to a partial container load that is usually consolidated with other goods to fill a container)

**LCL consolidated by Consolidator** **(n)** (logist, shipping econ) zbirni teret za kontejnere koji prikuplja konsolidacijsko skladište: In the case of consolidation cargo, the **consolidators** issue their House Bills of Lading to the shippers and secure a Master Bill of

**lee /liː/ (n) (meteorol, navig)** a downwind area of the sailboat/ship or on the side of it; an area sheltered from the wind

*zavjetrina:* The pilot boat came on the lee side, because the prevailing 20 knot wind, sea conditions were fairly rough and cold. A deep sea fishing vessel’s main engine stopped at a critical moment after she had been sheltering from severe weather for almost 2 days in the lee of an island. Due to a deep depression producing severe gales, the vessel remained within the lee of the land for most of her voyage.

**leech /liːtʃ/ (n) (sailing/boating/yachting)** the back edge of a sail; the aft or trailing edge of a fore-and-aft sail; the leeward edge of a spinnaker; a vertical edge of a square sail

*stražnji rub jedra, stražnji porub jedra, ventana, ventam, Italian: balumina:* The sheet exerts a large downwards force on the leech of the sail when the boom is directly above it, much more than the kicker. The kicker controls leech tension and twist when the boom has passed to leeward of the traveller. A series of telltales along the leech of the main should flow evenly. Most boats benefit from a boom vang, which keeps tension on the mainsail's leech.

letter of indemnity /inˈdemniti/ (=LOI) (n) (mar law) A written undertaking by a shipper (infra) to indemnify a carrier for any liability which the carrier may incur for having issued a clean bill of lading when, in fact, the goods received were not as stated on the bill of lading. Such a letter is usually a central document in a fraud, whereby the shipper and carrier knowingly misrepresent to third parties the actual order and condition of the goods at the time of shipment or the bad order of the packing, or whereby they issue duplicate bills of lading to replace lost or stolen originals. Letters of indemnity should not be
condoned by courts and are generally held ineffective as against third parties.

pismo, garantno pismo: There is no p&i cover for misdelivery of cargo, so change of destination is usually the subject of a letter of indemnity ... In case of cargo being lost or delayed in transit, the shipping company will allow delivery of the goods to the person claiming to be the consignee, if he gives a letter of indemnity; this is normally countersigned by a bank, and relieves the shipping company of any liability should another person eventually come along with the actual bill of lading. When the owners instruct the master to accept a letter of indemnity (LOI), they will take steps to ensure that the wording of the LOI presented to the master is the same as that which they have proposed. Carriers who meet a shipper request to issue a clean bill of lading in spite of pre-shipment damage or to backdate a bill of lading to meet letter of credit terms sometimes require letters of indemnity. The master or owner, if they agree, may require a letter of indemnity from the shipper for the consequences of complying should it turn out that the named party is not entitled to take delivery of the goods. It should be noted that, as a rule, any such letter that seeks to indemnify against an act, which is intended to defraud an innocent third party, is unenforceable in a court of law. http://www.leewardcorp.com/es/ The master or owner, if they agree, may require a letter of indemnity from the shipper for the consequences of complying should it turn out that the named party is not entitled to take delivery of the goods. http://www.tkmglobal.net/chartering_L.HTM Flexport will require an LOI if the consignee is receiving cargo without the presentation of an endorsed original bill of lading; i.e. if the shipment is released with a telex release.

Lex maritima (troškova): Many carriers are expected to levy interim IMO surcharges in November.

Lex maritima (n) (mar law) A body of oral rules, customs and usages relating to navigation and maritime commerce, the first elements of which may be traced back to the Rhodian Law (infra) (c. 800 B.C.), and which developed in medieval Western Europe from the ninth to the twelfth centuries as part of a wider, customary mercantile law (the lex mercatoria or Law Merchant, infra), administered by merchant judges.

Pomorsko pravo (temeljeno na usmenoj predaji): This lex maritima, part of the lex mercatoria, or Law Merchant as it was usually called in England, was the general law applicable in all countries of Western world. Much of this contemporary lex maritima is to be found in the maritime arbitral awards rendered by arbitral tribunals around the world by a host of institutional and ad hoc arbitration.

Lex mercatoria (n) (mar law) COMPARE lex maritima A body of oral, customary mercantile law which developed in medieval Europe and was administered quite uniformly across Europe by merchant judges, adjudicating disputes between merchants. The lex mercatoria originally included the lex maritima.

Shipowners are generally entitled to limit their liability in respect of claims arising from damage caused by their ships. The maximum liability of a shipowner is usually calculated based on the size of the ship involved in the incident and has no relationship to the amount of damage caused by the incident. There has been a trend in the more recent Conventions to establish systems of determining liability to pay compensation for damage, in addition to providing a limit on the shipowners liability. Liability of the owner of a seagoing ship in case of damage to cargo or persons due to collision or other accidents is not unlimited. A typical SOL example is geographical deviation or departure from the contractually agreed voyage; liability for loss of and/or damage to cargo arising out of such a deviation falls outside the scope of standard P&I.

Two diesel generators were sharing the electrical load and the engine speed had been reduced to 60 rpm so that the main engine was ready for any further required reductions of speed.

Vessel engineers did not reduce the main engine load further as that would have required change over from fuel to diesel oil. Pulsating compressor noise, typically registered at around 30–50 per cent engine load, can be an issue due to today's higher power outputs.

To begin work, the engine was taken off load, declutched from its gearbox and stopped from the machinery control room (MCR).

The special four-bolt design allows for an extra-large bearing which reduces bearing load, extends bearing life and improves crankshaft strength and stiffness.

The fuel is injected and burned directly resulting in high efficiency, combustion stability and that the engine can react on fast load changes in heavy weather and under changes in heavy weather.

The cargo piping and ballast piping are also completely separate. This eliminates the discharge of ballast contaminated with oil from the tank's cargo on the previous loaded leg.

A general cargo ship was on loaded passage in coastal waters, steering a course of 184 degrees (T) and making a speed of about 11.4 knots. Every day, during the loaded passage, the Levels (Ullage) and Temperatures (in case of heated cargo) of cargo shall be measured and recorded.

The master therefore informed all parties concerned and stopped the loading by closing the hatches. Berth No. 3 Northern Jetty was used by the ship for discharging and loading chemical products. The accident happened because deficiencies in the loading and securing of the deck containers were spotted but not rectified before the ship sailed. It is the duty of the Master to inform the pilot of any special conditions, difficulties, or peculiarities whatsoever pertaining to vessel which might impose hazards in connection with the handling, berthing, unberthing, loading or discharging of the vessel. The chief officer is responsible for the safe handling, loading, stowage and carriage, including the custody of the cargo throughout the voyage.

After loading commenced, moorings were regularly tended to by ship's staff. After completion of loading, a cargo surveyor boarded to take samples of the cargo.

A marine loading arm, also known as a mechanical loading arm, loading arm, or mla is a device consisting of articulated steel pipes that connect a tankship such as an oil tanker or chemical tanker to a cargo terminal.
**loading arm**: The use of **loading arms**, or **articulated pipe systems**, to replace hoses is becoming increasing popular, especially on bottom loading or unloading operations. 

https://www.loadtec.co.uk/hoses-versus-loading-arms/ **The loading arm and hose** must be flanged oil-tight to the ship’s manifold so that oil spills can be avoided. Liquid cargo is nowadays usually transferred using an articulated arm loading/discharge systems, and groups of **loading arms** are often found on a shore refineries or on offshore loading facilities. **The loading arm** will be out of service for some time, resulting in financial consequences for the terminal; Mainly used in the oil and gas industry, **loading arms** and **hoses** are storage tank equipment commonly used to transfer fuel or liquid. Nowadays, a **loading arm** is recommended suitably for tanker loading and unloading, it is seen as the safe, fast and easy way of operation especially in the terminals.

Agent and Loading Master do not board before sailing, so no signatures are possible on 19 L or Letter of Protest. If inspectors or loading master are onboard at the time, get them to seal the samples, with an accurate description of the contents. Normally a loading master or the pilot remains on board, once the vessel is moored, to co-ordinate communications between ship and terminal, as well as assessing weather. A short time later, the loading master again asked if the vessel was ready to load but still the lines were not cooled to the correct temperature.

Throughout the loading operation, the dock water density was consistently measured by the Chief Officer to be about 1.013.

Narrative A ro-ro vessel’s late arrival in port had put her loading operation behind schedule: there was no time to lose. Before commencing loading operations, I always ensured that both stevedores and my deck crew understood the proper technique, ...

There was no dangerous cargo in this area according to the loading plans. In accordance with the pre-arrival schedule and loading plan, extra ballast was being pumped out. The loading plan should always be prepared carefully and, especially for containerships, calculations should include the characteristics of each loading and all different sizes of containers. (https://safety4sea.com/)

The vessel was en route to a loading port, when the chief engineer commenced routine maintenance of no. 1 auxiliary engine as per maintenance programme. ... a coastal LPG tanker was north-east bound in the Dover Strait Traffic Separation Scheme enroute to its loading port in Scotland. The terminal managers in the loading port did not consider the cargo to be hazardous, and the wet cargo was loaded in rain without trimming or measuring the cargo temperature.

The hourly loading rate was about 10,000 cu m/hr and six cargo tanks were receiving the cargo simultaneously: two tanks per connection. The initial loading rate of 120 m3/hr-1 was gradually increased to 250 m3/hr. The hourly loading rate was about 10,000 cu m/hr and six cargo tanks were receiving the cargo simultaneously: two tanks per connection.

A few amendments were made to the loading and deballasting plan and a revised loading sequence was submitted. However, the master stated that he would only agree to continue loading after re-working the loading sequence based on the higher rate of loading now demanded.

... The SPM tower, located in position Lat. 29_06.90' N, Long. 048_19.30' E, approx. 1.5 n.m. east of the damaged loading terminal.

The loading terminal numbers the tiers from the bottom of the hold upward including the containers on deck. The cargo stowage plan is prepared by the loading terminal after the ship has been loaded and is used to facilitate the subsequent loading and discharge of cargo at all ports along the voyage.

In order to stagger the topping off process of the cargo tanks, the cargo tank loading valves had been adjusted to achieve the desired ‘spread’.

load on top (v) (safety) the shipboard procedure of collecting and settling water and oil mixtures, resulting from ballasting and tank cleaning operations (usually in a special slop tank or tanks), and subsequently loading cargo on top of and pumping the mixture ashore at the discharge port.
When the vessel arrived at the Loading Terminal and attempted to load on top, the cargo was not reaching the cargo tanks. The vessel was carrying a cargo of sawn timber and, at the time of the accident, shore stevedores were discharging the timber loaded on top of the forward hatch cover.

As the vessel anchored off the load port, awaiting berth, the cleaning of 3 and 4 holds was in progress. The vessel had loaded a cargo of timber and departed her load port earlier that evening.

The propulsion control must not permit faster load reduction than 20 s from 100% to 0% without automatic transfer to diesel first.

During the load-test of the rescue boat launching appliance, the three point lifting sling failed. To perform the load test we use modern water bags placed in the lifeboat, as well as using other specific water bags to carry out the test directly from the davits.

Sounding pipes extending above the load water-line are fitted in each compartment and ballast tank.

Each CR fuel pump is driven by a two-lobe cam, whose pumping profile can be considerably slower than the conventional jerk pump type that it replaces.

LOF 2000 (=Lloyd’s Open Form) = Lloyd’s Standard Form of Salvage Agreement A form of salvage contract approved and published by the Council of Lloyd’s to replace, as of September 1, 2000, the previous Lloyd’s Standard Form Salvage Agreement (LOF 1995). The acronym LOF derives from the former name of the Agreement (Lloyd’s Open Form). LOF 2000 provides for salvage services to be rendered on the principle of no cure - no pay (infra), subject, however, to the provisions of the Salvage Convention 1989 (infra) relating to special compensation (infra) and to the SCOPIC Clause http://www.mindserpent.com/American_History/reference/Tetley_admiralty/Tetley_2004.htm

Aluminium alloy has been traditionally used for turbochargers because of its high specific strength and excellent machinability.

There were no instructions posted locally to the machine and little record of training. Maintenance: During maintenance oil and wear parts in the machine are replaced. Cracks can initiate on the machine after a period of operation and propagate with time. The Standard compass in particular is the only machine we have at sea which is almost 100% reliable and I do wish this was recognised. Only skilled or instructed persons are allowed to operate the machine, e.g. operating and management staff.

At appropriate intervals the main propulsion plant, auxiliary machinery and steering gear should be inspected.

Personnel should never enter or remain alone in any unmanned machinery space unless they have advised the bridge of their intentions. Modern ships provided with an Unmanned Machinery Space (UMS) such as tankers and bulk carriers employ dual-watch (poli-valent) officers (MarOff in the Netherlands) capable of keeping simultaneously the navigating and engine-room watch.

Such vessels operate on liner cargo and tramp services, and are provided with large insulated holds with refrigerating machinery to control the temperature of the cargo. These ships shall obtain a certificate from a class surveyor or other competent expert prior to loading, stating the condition and suitability of the refrigeration machinery and reefer compartments for the carriage of the specific cargo in question.

The size and shape of the deck machinery may vary depending upon type of vessel, but the operating principles remain the same.

Recommendation that the use of eye protection should be considered when operating hose handling cranes or other hydraulic machinery where flexible hoses and fittings may be exposed to the aggressive elements of the sea.

Note: A machinery space is not limited to the engine room noting that spaces containing auxiliary propulsion machinery are also included in the definition in regulation 2 of SOLAS II-1. Every chief engineer officer and second engineer officer on a seagoing ship powered by main propulsion machinery of 3,000 kW propulsion power or more shall hold an appropriate certificate.

Although some power was immediately restored by the emergency generator, it took some time to get the main machinery restarted. While alongside during the morning watch, a “bang” was heard in the unmanned forward main machinery space of a 20,000gt ro-ro ferry.

magnetic bearing (n) (navig) an absolute bearing using magnetic north magnetski azimut: The ship’s bearing from shore on the reversed pelorus is the magnetic bearing of the shore position from the ship. Determine the range’s true bearing from a chart; then, convert this true bearing to the magnetic bearing by applying the variation listed on the chart.

magnetic compass (n) (navig) an instrument employing a magnetized needle which aligns with the Earth’s magnetic field and indicates magnetic north magnetski kompas: This magnetism is the principal cause of deviation changes of a magnetic compass. The process of neutralizing the magnetic effects the vessel itself exerts on a magnetic compass is properly called COMPASS ADJUSTMENT, but the expression COMPASS COMPENSATION is often used for this process, too. A marine magnetic compass, usually of the inverted type, frequently installed in the master’s cabin for his convenience. After 1840, British Astronomer Royal Sir George Airy and later Lord Kelvin developed combinations of iron masses and small magnets to eliminate most magnetic compass error.

manifold /ˈmæniəuld/ (adj) višestruk, mnogostruk

manifold /ˈmæniəuld/ (n) (cargo handling) A casting or chest containing several valves. Suction or discharge pipes from or to the various compartments, tanks, and pumps are led to it, making it possible for several pumps to draw from or deliver to a given place through one pipe line.
Cargo manifold is the position which the ship connects to the land facilities to transfer liquid cargo. (https://www.fukuzo.co.jp/en/shipbuilding/)

Oil cargo is discharged from the ship's tanks, via the cargo piping system to the main ship's manifold usually situated amidships, on either port or starboard side. From there by means of shore-based loading arms oil is transferred to the shore manifold and is then distributed to shore-based storage tanks on the oil terminal. The duty officer had not checked that the ABs had blanked the manifold after the cargo hose had been disconnected. Keep manifold valves closed during idle periods. This will prevent inadvertent over pressurization due to shore error. Monitor the manifold pressure closely and throttle the main manifold valve as required. https://safety4sea.com/

On a tanker, the interface between the shore pipeline connection and the tanker's pipeline system. Usually measured in inches of diameter

Immediately after completion of line blowing the manifold valves were sealed by the cargo surveyor.

**marine engineer** /məˈriːn ,ɛnˈdʒiːnɪər/ *(n) (marine eng) = engineering officer* Marine engineer officers are responsible for the maintenance and operation of a ship’s main propulsion machinery and auxiliary plant, including deck machinery, air conditioning plants, refrigeration plants and domestic and electrical services. pomorski strojar, brodski strojar, inženjer
Marine engineering: A responsible marine engineer watch keeper has to fill the log book for his/her own watch period without fail, along with the signature of all watch keepers for their concerned watch. Depending on the type of ship and the operational circumstances, marine engineer officers will be required to keep watches in the ship’s engine room. As a marine engineer working on ships, you would be required to monitor the performance of turbochargers during the watch and carry out maintenance whenever required. The successful candidate may be awarded a diploma and will then be able to work on ships as a qualified Marine Engineer class four. He has sailed on a number of ships serving as a marine engineer officer.

Marine engineering is the primary function of any marine engineering plant is to convert the chemical energy of fuel into useful work and to employ that power for steering, lighting, ventilating, air conditioning, heating etc. “We’re pleased to provide scholarships to deserving midshipmen who demonstrate leadership in the field of marine engineering and who have built a greater understanding of clean air technologies. www.MaritimeProfessional.com He has an MSc in Marine Engineering and BSc in Naval Architecture. **maritime law** (n) *(mar law)* a complete system of law, both public and private, substantive and procedural, national and international, with its own courts and jurisdiction, which goes back to Rhodian law of 800 B.C. and pre-dates both the civil and common laws. Its more modern origins were civilian in nature, as first seen in the Rôles of Oléron of circa 1190 A.D. Maritime law was subsequently greatly influenced and formed by the English Admiralty Court and then later by the common law itself. http://www.mindserpent.com/American_History/reference/Tetley_admiralty/Tetley_2004.htm

**pomorsko pravo**: Maritime law consists of a body of laws, conventions and treaties that govern international private business or other matters involving ships, shipping or crimes. Maritime law is a body of both domestic law governing maritime activities, and private international law governing the relationships between private entities that operate vessels on the oceans. Maritime law is composed of two main parts - national maritime statutes and international maritime conventions, on the one hand, and the general maritime law (lex maritime), on the other.

**maritime law** (n) *(mar law)* maritime law in a narrow sense pomorsko privatno pravo:
A distinctive feature of maritime law is the privilege accorded to a shipowner and certain other persons (such as charterers in some instances) to limit the amount of their liability, under certain circumstances, in respect of tort and some contract claims.

**maritime lien** (n) *(mar law)* A secured claim against a ship (and sometimes against cargo or bunkers) in respect of services provided to the vessel or damages done by it. A maritime lien is a substantive right in the property of another, derived from the general maritime law and rooted in the civil law concept of a privilege. It arises without notice, registration or other formalities, at the time the services are rendered or the damages are done.

„sredstvo osiguranja stvaropravne odgovornosti za određene tražbine koje nastaju iz same plovidbe“ (Čorić 1993); privilegiji na brodu primjenjuju se na tražbine (claims) prema vlasniku, zakupcu ili brodaru (owner, charterer or ship operator), a pod posebnim uvjetima i prema poslodavcu i poslodavci broda (ship manager and the employer) za tražbine kao što su plaće, smrt, tjelesne ozljede, spašavanje, lučke naknade, štete počinjene na drugim stvarima itd. (Pomorski zakonik RH); maritime lien ima pravo prvenstva pred hipotekom/mortgageom pomorski privilegij, pravo zadržavanja broda, privilegij na brodu: Under the law of salvage, strangers to the maritime venture who succeed in saving maritime property from loss or damage from perils of the sea or other waters are entitled to an award for their efforts and have a maritime lien on the salvaged property thereafter. Maritime liens can arise not only when the personified ship is charged with a maritime tort such as a negligent collision or personal injury, but also for salvage services, for general average contributions, and for breach of certain maritime contracts.

minimum angle of flooding: I repeat again that when you write “For normal ships stability range is checked for 40 degree or downflooding angle whichever is lesser”, you may refer to the dynamic stability because otherwise it would not make any sense. and “minimum angle of flooding” must be checked for intact and for damage stability. When the vessel has a large angle of heel, unprotected openings in the hull, superstructure superstructure or deck can be immersed. This will result in a progressive flooding of the hull and in a reduction of GM. According to the regulations of IMO A749 it is only permissible to calculate the stability up to the angle where flooding occurs. In section 4.12 this angle is called X or 40 degrees. A common carrier that holds itself out to the public to provide ocean transportation, issues its own house bill of lading or equivalent document, and does not operate the vessels by which ocean transportation is provided (FMC https://www.fmc.gov/resources/ocean_transportation_intermediaries.aspx; The main difference between a freight forwarder and an NVOCC is the responsibility. Although both companies will track your cargo and move it through the supply chain, an NVOCC is also acting as a carrier and has more responsibility for your cargo. (https://globalforwarding.com/blog/freight-forwarder-vs-nvocc); A Non-Vessel Operating Common Carrier (NVOCC) is an ocean carrier that transports goods under its own House Bill of Lading, or equivalent documentation, without operating ocean transportation vessels. Rather, an NVOCC leases space from another ocean carrier, or Vessel Operating Common Carrier (VOCC), that they sell to their own customers. An NVOCC can be described as a shipper to carriers and a carrier to shippers. (https://www.flexport.com/glossary/non-vessel-operating-common-carrier/)

8.1.1 Hand Tools
   a. Hand Spanner/Wrenches

   There are different types of hand spanner and wrenches that are available in the workshop which could be selected depending on the type and condition of maintenance work to be done.

   Example usage of hand spanner and wrenches:
   
   i. Adjustable wrench is used as easy tool for undetermined size of bolt and nut when immediate tightening is required.
   ii. Adjustable pipe wrench is suitable for fastening/loosening small sizes threaded pipes and damage head bolt in an awkward position.
   iii. Slogging spanner is used for loosening and tightening big sizes of bolts using hammer.
   iv. Instead of adjustable pipe wrench, hook spanner is used for threaded cap connection with teeth to avoid damaging the cap.
   v. Offset spanners are used when working in an awkward position jobs.
   vi. Square drive wrench is specially used for square bolts or handle.
   vii. Torque wrenches are used for a specified torque controlled tightening of bolts and nuts.

At approximately 2300, the ship’s master finished his night orders and advised the second officer to keep to the passage plan and to call him if in any doubt.

Given the information received from Port Pilots, the master decided to amend the passage plan and proceed to a waiting position about 3 nautical miles (nm) east of the entrance to the port. 

Bridge team must follow the passage plan.

It is customary for the Master to delegate the duties of preparing the passage plan to the designate navigational officer (i.e. the second deck officer, who is responsible for navigational equipment and publications). Even after passage planning is complete, a good lookout is vital.

ECDIS Passage Planning and Watchkeeping presents individual chapters covering the configuration of ECDIS settings and each of the four stages of passage planning.

passage planning (n) (navig) a description of the ship's passage which is prepared by an experienced navigating officer of the ship (usually the Second Officer), and includes the required routes for reaching the port of destination.

Such conditions are commonly experienced within the area, were predictable and could have been avoided by effective passage planning. Passage planning (including drawing the courses) is prepared from berth to berth by the Navigation Officer in accordance with the Master’s directives and with the instructions given by the Charterer or the Ship Owner.

Navigation within the port encompassed the approach channel, the short-term anchorage and the pilot boarding area. Poor planning considerations caused the delay in weighing anchor, which in turn required a high speed approach to the pilot boarding area.

At 2245, the vessel arrived at the designated pilot boarding point.

At 2115 the vessel approached the pilot boarding station, where a little later, the port pilot boarded the vessel and went to the bridge. The ship has two designated pilot boarding stations.

The designated pilot boarding station on board the vessel was in accord with IMO Resolutions A.667(16) and A1045(27) as amended in that the stanchions were only 640mm apart, rather than the minimum 700mm, and were 1020mm in height, rather than the minimum 1200mm.
The vessel was making way at near nine knots in order to match the speed of the pilot boat and was sounding the prescribed fog signal. A pilot boat came alongside to pick up the pilot, a deckhand on board the pilot boat suffered serious injuries whilst the pilot boat was pulling away from alongside the container ship. On board the pilot boat were its coxswain, deckhand and the sea pilot. The passing ship’s wash might have caused the pilot boat to drop relative to the cargo ship just as the sea pilot was attempting to step across.

The Master and pilot on vessel A carried out a pilot briefing and the pilot had received a copy of the pilot card. There had been a short pilot briefing where the bridge team were advised that that the vessel would berth starboard side at berth A which had a course of 285 degrees. It is imperative during the pilot briefing that the approach is discussed in detail with the entire bridge team, so orders can be challenged if there is concern.

The pilot was given the vessel’s pilot card, which detailed its manoeuvring characteristics. The master and pilot then discussed the departure plan. The ship’s pilot card was provided to the pilot during the master/pilot information exchange (MPX).

Such access shall be gained directly by a platform securely guarded by handrails. peljarsko vitlo, peljarsko dizalo, peljarski lift, dizalo za peljara: A pilot boarding hoist is raised by a power winch. The mechanical pilot hoist should be designed to operate as a moving ladder, or as a platform, to lift and lower one person on the side of the ship. Case 1 deals with the failure of a pilot hoist and happened to a pilot disembarking from a high sided vessel on the UK coast shortly before midnight. A mechanical pilot hoist should be so located that it is within the parallel body length of the ship and, as far as is practicable, within the mid-ship half length of the ship The starboard pilot hoist was used to lower the pilot to the waterline and it operated faultlessly

piloting  /ˈpaɪlətɪŋ/  (n)  (navig) the act of guiding a ship (in and out of the port) through near shore hazards by a pilot; Branch of the science of navigation in which positions are determined by reference to visible objects on the surface or by sounding. (http://www.quarterdeck.org/index.html) a peljarenje, pilotaža

piloting  (n)  (navig) determining ship’s position and directing her course by means of bearings to landmarks or by buoys and soundings when in sight of land (by eyesight or radar) obalna
The pilot ladder had been rigged such that it was nearly 2 metres too long. The situation was made worse because the seaman, who was also the lookout, was also tasked to rig the pilot ladder alone. During my climb on the pilot ladder from the pilot launch up the ship's side I noticed that one side of the ladder lengthened under my weight. The pilot ladder spreader (preventer step) ropes used at regular intervals of the pilot ladder and help to ensure that the ladder does not get twisted which would cause difficulty to the pilot. The pilot ladder manropes a rope which is present on both sides for physical hold of the person climbing or descending from the ship. The pilot ladder sideropes ropes used to hold the steps and take the weight of the climbers and the steps. The steps / treads the steps obviously need to be made of non-slippery material and are also normally made of same material like the spreaders, except the last 3 steps which are made out of hard rubber.

The job climbing a pilot ladder is not easy so there is a maximum limit to which the pilot is supposed to climb. www.gov.uk/maib

A pilot ladder had been rigged, but the sea pilot attempted to board by stepping up and through an open gate in the railings onto Sunmi’s main deck. The pilot ladder was rigged in accordance with the river pilot’s instructions. The stanchions were only 640mm apart, rather than the minimum 700mm, and were 1020mm in height, rather than the...

quay crane /ˈkiə/ (n) (cargo handling) obalna dizalica
quay length (n) (ports) dužina veza, dužina pristaništa: The quay length extends over 3 kilometres and has a maximum anchorage depth of 15 meters. https://www.marineinsight.com/
quay rent (=quay money) (n) (logist) in addition to container hire, the shipping company often charges its clients compensation for use of a storage space at the terminal outside the free period. This is to ensure that the container is emptied and made available for reuse in the short term. https://www.logisticsglossary.com/term/quay-rent/ naknada za najam obalne površine na terminalu (povrh vremena besplatnog korištenja obale)
quayside (=ˈkiːsəd) (n) (ports) the dock or platform used to fasten vessels, usually running alongside the shore lučka obala
quayside crane /ˈkiː.said/ (n) (cargo handling) obalna dizalica
queued ships (=kjuːd) (n) (logist) brodovi na čekanju (za uplovljenje u luku): For the queued ships, the wait appears to range from several days to nearly two weeks
quick lights (n) (navig) lights exhibiting very rapid regular alternations of light and darkness, normally 60 flashes per minute kratka svjetla (formerly called ‘flashing lights’)
quick release device (n) (seamanship) naprava za brzo otpuštanje (lanca, konopa)
quick release hook (n) (seamanship) (nav arch) kuka za brzo otpuštanje (lanca, konopa, brodice za spašavanje), brzootpusna kuka, samotpusna kuka: the ship was moored to quick release hooks on the mooring dolphins At this point, the hook released the tensioned breastline. The boat then started to lower and almost immediately stopped, at which point the
quick release towing hook opened and the boat fell just under a metre into the water. quick release mooring

hook kuka za brzo otpuštanje
quick release towing hook (n) (seamanship, nav arch) samootpusna kuka za tegljenje, brzootpusna kuka za tegljenje
quick releasing device (n) (nav arch) naprava za brzo otpuštanje lanca
quick response: QR (n) (shipping econ) A consumer-driven system of replenishment in which high-quality products and accurate information flow through a paperless (EDI) system between all distribution points from the manufacturing line to the retail checkout counter. (http://www.maerskline.com/en-jm/help/shipping-glossary) brza organizacija prijevoza putem sustava EDI
quick works (n) (sailing vessels, nav arch) = underwater parts podvođe, ribina, živa banda
quitclaim (n) (mar law) A legal instrument used to release one person's right, title or interest to another without providing a guarantee or warranty of title. (http://www.maerskline.com/en-jm/help/shipping-glossary) prepuštanje vlasničkih prava drugome bez jamstva
quitting the ship (n) (mar law) napuštanje broda
quoin; coign; coigne /kwoin ; koin/ (n) (cargo) drveni klin za pričvršćivanje bačava
quotas /kwətəs/ (n) (shipping econ) A system of controlling imports, exports or production by specifying a certain limitation. The quantity of goods that may be imported without restriction or additional duties or taxes. (https://www.msc.com/shipping-glossary) kvote (tereta / roba odobrene za izvoz / uvoz)
quotation /ˈkwə(ʊ)teɪʃ(ə)n/ (n) (shipping econ) 1 Amount stated as the price according to tariff for certain services to be provided or issued to a customer with specification on conditions for carriage. (https://www.msc.com/shipping-glossary) ponuda (s cijenom); 2 uvjet prodaje, iz INCOTERMS-α kotacija
rabate /ˈreɪbeɪt/ (shipping econ) rabat, popust
rabbet plane (n) (sailing/boating/yachting, nav arch, sailing vessels) blanja
rabbets /ˈræbəts/ (n) (sailing vessels) a recess or groove usually of rectangular section, cut into a surface or along the edge of a wooden boat's timber kobilični utori (drvenoga broda)
race /reɪs/ (n) (sailing/boating/yachting) regata, regatno natjecanje, jedriličarska regata notice of race obavijest o regati, raspis regate
race: The inner or outer groove or channel bearing ring. (http://www.marinedieseleurope.com/)
prsten kugličnog ležaja raceway kanal prstena kugličnog ležaja, restarted race ponovno startana regata, resailed race ponovljena regata
race (v) (sailing/boating/yachting) natjecati se, regatavati
race (n) (sailing/boating/yachting) jedno natjecanje jedrilicama tijekom jedriličarske regate plov
the second race of the sailing regatta drugi plov regate
race committee (n) (sailing/boating/yachting) The race committee appointed under rule 89.2(c) (Rules of Racing 2017-2020) regatni odbor
race signals (n) (sailing/boating/yachting) signali jedriličarskog natjecanja, regatni signali postponement signals signali odgode (regate), abandonment signals signali prekida (regate), preparatory signals signali pripreme (regate), recall signals signali opoziva, Changing the Next Leg signali za izmjenu sljedeće stranice (regatnog polja)
race tie (n) (sailing/boating/yachting) izjednačenost jedrilica na linji cilja (u regati): Two boats are tied at the finishing line. Djive su jedrilice izjednačene na liniji cilja.
racing (n) (sailing/boating/yachting) A boat is racing from her preparatory signal until she finishes and clears the finishing line and marks or retires, or until the race committee signals a general recall, postponement or abandonment. (https://www.sailing.org/documents/racing-rules.php); Jedrilica se natječe od svojeg signala pripreme, sve dok ne završi i napusti liniju i oznake cilja ili se povuče, ili regatni odbor signalizira opći opoziv, odgodu ili prekid. racking (n) (nav arch)

When a ship is rolling, the accelerations on the ship’s structure are liable to cause distortion in the transverse direction. The deck tends to move laterally relative to the bottom structure, and the shell on one side to move vertically relative to the other side. This type of deformation is referred to as 'Racking'. (https://cultofsea.com › Ship Construction); Deformation of the section of a ship, generally applied to a transverse section, so that one set of diagonals in the plane of action is shortened while those at right angles thereto are lengthened. (https://www.history.navy.mil/)

racking force (n) (cargo handling)

A result of the static and dynamic forces within the container parallel to the ship’s deck, causing damage to the container

sile izvijanja kontejnera u smjeru paralelnom s palubom broda: Exceeding racking forces can be reduced by use of diagonal lashing units. In the pitching condition the racking force is acting in the container side frames.

racon /ˈreɪkən/ (n) (navig)

A radar beacon which produces a coded response or radar paint, when triggered by a radar signal; A racon is a radar transponder commonly used to mark maritime navigational hazards and other navigation features. radarski far odgovarač, radarski far tip racon, rakon, radarski svjetionik:

The signal transmitted by the RACON appears intermittently on the display as a Morse character, a dashed or dotted line radiating out from the beacon. In the U.S., RACONs are used to mark lighthouses and buoys, inconspicuous coastlines, navigable spans under bridges, offshore structures such as oil platforms, or environmentally sensitive areas such as coral reefs. Racons are particularly useful for showing up objects which otherwise may be difficult to identify. interrogation subsystem uređaj za odašiljanje signala, transponder subsystem uređaj za odziv, sensitivity time control automatska kontrola pojačanja prijamnika, automatic overload control sustav za

RADAR /ˈreɪdər/ (n) (navig, ship’s equipment) an electronic system designed to transmit radio signals and receive reflected images of those signals from a target in order to determine the bearing and distance to the target (Seasources.net) radar: Make effective use of the vessel’s radar. Both the Master and OOW were monitoring the vessel’s progress on the radars. https://safety4sea.com/ operational radar radar u radu, radar koji je uključen, radar out of operation 1 radar u kvaru; 2 radar koji je isključen, 3cm, X-Band, 9 GHZ radar radar valne dužine 3 cm, X-pojasnov područja (9320-10000 MHz), 9GHz, radar target cilj radarskog motrenja, 10cm, S-Band, 3 GHZ radar radar valne dužine 10 cm, S-pojasnov područja (2900-3100) (akronim za: RA dio D irec tion A nd R anging)

radar antenna (n) (navig) radarska antena

radar bands (n) (navig, electr) There are two main frequency bands in commercial Radar: X-Band (9,000 MHz band; wavelength 3cm) and S-Band (3,000 MHz band; wavelength 10 cm). radarski pojasevi radar bands frequencies frekvencije radarskih pojaseva

radar bandwidth (n) (electr) širina radarskog pojasa: radar bandwidth is normally matched to the radar pulse length and is usually switched with the range scale and the associated pulse length

radar beacon; racon (n) (navig) = racon radarski far odgovarač, radarski odgovarač

radar beam (n) (navig) radarski snop, radarska zraka, glavna radarska latica horizontal radar beam horizontalni snop, vertical radar beam vertikalni snop

radar beam deflection system otklonski sustav radara

radar bearing (n) (navig) radarski azimut measure radar bearing izmjeriti radarski azimut, odrediti radarski azimut, determine radar bearing: Bearing to a target is determined by the direction from which a reflected echo returns.

radar blip (n) (navig) radarski signal, signal na radarskom ekranu

radar controls (n) (navig) kontrole na radaru, upravljačke naprave na radaru, kontrole radara SCANNER ON-OFF prekidač za uključivanje i isključivanje antene, START-STOP glavni prekidač za uključivanje i isključivanje motor-generatora ili statičkog konvertera, TRANSMIT

radar display error

steer 319° and adjusted the port radar display to ‘north-up’.

radar display error

radar display stabilisation (n) (navig) stabilizacija radarske slike
radar duct (n) (electr, navig) valovod, radarski kanal, kanal radara
radar echo (n) (navig) Screen of a cathode-ray tube with an intensity-modulated and persistent radial display, which rotates in synchronism with a highly directional antenna radarski odraz, radarska jeka, jeka na radarskom zaslonu, signal u prijemu (PPI is the most common type of radar display. The radar antenna is usually represented in the center of the display, so the distance from it and height above ground can be drawn as concentric circles. As the radar antenna rotates, a radial trace on the PPI sweeps in unison with it about the center point.)

radar equation /ˈreɪdər ɪˈkweɪʒən/ (navig, electr) jednadžba radara
radarflare (n) (navig, safety) signalna raketa s radarskim signalom
radar for pilot use (n) (navig) radar namijenjen peljaru, radar za peljara
radar gain (n) (navig) osjetljivost radara
radar horizon (n) (navig) radarski horizont: Due to refraction radar can see about 6%

radar horizon

Here the height of radar antenna ‘h’ is in feet

radar interference (n) (navig) međuradarska smetnja (dvaju bliskih brodova), radarska interferencija: Mutual radar interference may occur in the vicinity of another shipborne radar operating in the same frequency band (9 GHz).

radar logbook (n) (navig) dnevnik radara: On the technical side, information recorded in the logbook includes: maintenance and repairs carried out, spares on board and their part numbers, technical and performance details and information concerning arcs of shadow and blind sectors. On the operational
side, information recorded in the logbook includes: details of detection ranges for various types of targets and information concerning detection ranges of conspicuous objects.

**radar marker (RAdarMARKer)** /rɛɪˈmɑːrk/ (navig) radarska oznaka

**radar mast** (navig) radarski jarbol

**radar navigation** (navig) Radar navigation uses radar to determine the distance from or bearing of objects whose position is known. This process is separate from radar’s use as a collision avoidance system. [Bowditch 2001] **radarska navigacija**: Radar navigation is similar to traditional navigation in that you have to identify landmarks, measure their position relative to your own and use those measurements to establish a position on the chart. Radar fixing is often quicker than taking bearings with a magnetic compass and is a more professional technique than simply transferring a latitude and longitude from the GPS. 0 (Used primarily when the ship is within radar range of land.)

**radar noise** (navig) radarske smetnje, radarski šum

**radar plotting** (navig) radarskom plotiranje, radarsko ucrtavanje: If a risk of collision is developing a radar plot should be started or the target captured by the Automatic Radar Plotting Aid (ARPA). **inaccurate radar plotting** netočno radarsko plotiranje

**radar position fixing** (navig) određivanje pozicije putem radara

**radar presentation** (navig) radarski prikaz, radarska prezentacija

**radar pulse** (electr, navig) radarski impuls: When radar pulses are transmitted the radar receiver is automatically tuned.

**radar (Radio Detecting and Ranging) radar**

**radar range** (navig) domet radara, radarska udaljenost: The higher the scanner or target is above the surface, the longer the radar detection range. **measure the radar range** to a target **izmjeriti udaljenost do nekog objekta radom** mesure the **radar range** The range to a target may be measured three ways: with the fixed range rings, with the cursor (if set to measure range and bearing), and with the VRM, **radar range rings** kružnice udaljenosti, high / low **radar range** najveći / najmanji domet radara, determine **radar range** odrediti udaljenost objekta radom: Radar determines the range to a target by measuring the amount of time required for a reflected echo to return to the scanner. **switch the radar range** between ... and ... (NM) **prebaciti domet radara između ... i ... (milja)**, **prebaciti radarsku udaljenost između ... i ... (milja)**: The range is switched between 3NM and 6NM.

**radar rearch** (navig) radarsko pretraživanje, traženje radarom

**radar receiver (RX)** (=Rx) (navig) radarski prijamnik, radarski prijamnik, prijamnik radara

**radar receiver - technical specifications** radarski prijamnik - tehničke osobine Intermediate frequency (IF) (MHz) međufrekvencija, Short pulse kratki impuls, Medium/Long pulse srednji/dugi impuls, Noise figure (dB) šum prijamnika (dB)

**radar reflector** (navig) radar reflectors are fitted to vessels or navigational buoys or other charted features to improve their reflective properties so as to make them visible to searching radar. A metal device designed for reflecting strong echoes of impinging radar signals towards their source. [http://www.seasources.net/Radar_Terms.htm] **radarski reflektor**: The most common type od
radar reflector is the octahedral reflector (8 corner reflectors). passive radar reflector pasivni radarski reflektor, active radar reflector aktivni radarski reflektor: There are two types of active radar reflectors or radar transponders which are used to assist the navigator to identify charted objects: racons and ramaraks.

radar repeater (PPI repeater, remote PPI) (n) (navig) The equipment used for reproducing the information from a radar set at a remote point by means of a cable.

radar resolution (n) (navig, electr) radar’s ability to distinctly display two radar targets which are close to each other radarska razlučivost, rezolucija radara, radarska rezolucija

radar scanner (n) (navig) radarska antena: The scanner transmits the radio pulses and receives their reflected echoes. Most scanners rotate at a constant speed of 24 rpm. Many modern scanners rotate at variable speeds dependent upon the range in use in order to optimize radar detection.

radar scanners - technical specifications (n) (navig, electr) radarske antene - tehničke osobine beamwidth (to –3 dB) (degrees): horizontal / vertical širina snopa u stupnjevima na 3dB: vodoravno / okomito, Sidelobe attenuation (dB) slabljjenje bočnih latica, Gain (dB) osjetljivost, dobitak/jačina, Rotation rate (rpm) broj okretaja (o/min), broj obrtaja (o/min)

radarscope (n) (navig) područje obuhvaćeno radarskim ekranom

radar service (n) (navig) radarska služba: By using four radar scanner’s, the port’s radar service extends from the East Lepe buoy, Western Solent to No Mans Land Fort in the Eastern Solent.

radar shadow (n) (navig) radarska sjena

radar simulation simuliranje pomaka navigacijske situacije u vremenu (Sušanj 2006)

radarska simulacija, simulacija (na ARPA radaru)

radar simulator (n) (navig) radarski simulator (na ARPA-i): The simulator emulates a variety of the functionalities found in modern marine radar and provides control over traffic density, waterways, sea state and weather conditions.

radar station (n) (navig) radarska postaja / stanica

radar surveillance (n) (navig) radarski nadzor

radar sweep (n) (navig, electr) svijetla crta (na radarskom zaslonu), svijetla zraka stolen radar sweep preskočeni otklon svijetle crte

radar system (n) (navig) radarski uređaj
The OOW also noticed a number of radar targets following the south-west traffic lane of the TSS.

A racon is a radar transponder commonly used to mark maritime navigational hazards and other navigation features.

A direction pointing from the center of a shaft outward.

A radio signal for use in providing a mariner a line of position

A radio signal for use in providing a mariner a line of position
radio coverage  područje pokriveno dometom radiopostaje / radiostanice
radio department  (n) (mar law) služba veze
radiodetermination  (n) (navig, safety) The determination of the position, velocity and/or other characteristics of an object, or the obtaining of information relating to these parameters, by means of the propagation properties of radio waves. (ITU Radio Regulations) radioutvrđivanje pozicije
radio direction finder (RDF)  (n) (navig) radiogoniometar
radio forecast  (n) (meteorol) radijska vremenska prognoza
radio frequencies  radijske frekvencije band 4 very low, band 5 low, band 6 medium, band 7 high, band 8 very high, band 9 ultra high, band 10 super high, band 11 extra high
radio frequency energy  (=r.f. energy)  (n) (comm, navig) energija
radiofrequencije
radio frequency head  (n) (electr, navig) frekvencijska glava (radara)
radiofrequency; (r.f.; rf; RF)  (n) (electr) radiofrekvencija
radiolocator  radiolokator
radio log  (n) (comm) radijski dnevnik
radio medical advice  (n) (med) radioliječnički savjet
radio navigation  (n) (navig) radioliječnički savjet

radiolocator  radiolokator
radio log  (n) (comm) radijski dnevnik
radio medical advice  (n) (med) radioliječnički savjet
radio navigation  (n) (navig) Radio navigation uses radio waves to determine position by either radio direction finding systems or hyperbolic systems, such as Decca, Omega and LORAN-C. Replaced recently by GPS.; Radiodetermination used for the purposes of navigation, including obstruction warning (ITU RR) radionavigacija
radio navigational warnings  (n) (navig) NAVAREA Warnings; Coastal Warnings; Local Warnings radijska upozorenja za plovidbu
radio-officer  a person holding an appropriate certificate issued or recognized by the Administration under the provisions of the Radio Regulations (STCW 2010) radio-časnik, radio-oficir, časnik radiotelekomunikacija, radiotelegrafist, markoni, Italian: marconista
radio operator  (n) (comm) dežurni radiočasnik, časnik koji koristi radiostanicu, radiotelegrafist
radio receiver  (n) (comm) radijski prijamnik
Radio Regulations  (=ITU-R)  (n) (comm, safety) Pravilnik o radiokomunikacijama: The procedures for distress and safety traffic are laid down in the International Telecommunication Union (ITU) Radio Regulations.
radio-room  (n) (nav arch) radiokabina

A rollover may entail a number of actions but often refers to the transfer of the holdings of one retirement plan to another without having to pay taxes.

It sometimes happens that containers get rolled. This means your container didn’t make the vessel. Not having your container loaded onto the ship may happen because of customs problems, overbooking, or vessel omissions.

Most shippers assume carriers would send rollover notifications, but only a few carriers seem to notify customers in advance that their cargo is about to be rolled or has been rolled.

A running moor uses two anchors to reduce the scope of the anchor when tides change from ebb to flood. In this case vessel is approaching on the ebb. A final anchor position must be selected and number of cables determined. This must not be more than half your available anchor chain. Both anchors must be lain in line with the ebb/flood tide direction. A helpful transit bearing should be identified. (https://tstarmet.com/seamanship/shiphandling-single-screw-rh-propeller/) sidrenje na dva sidra (s kursom u vjetar/struju): The Running moor is an anchoring operation carried out in areas of restricted manoeuvrability where the wind and tide are strong and from different directions RUNNING MOOR 1. shiphandling If the choice is available, the running moor would be carried out because it generally provides positive control to the ship handler. STCW examiner Where a designated moor is used, like a ‘running moor’ operation, two anchors are employed to reduce the ‘circle of swing’. STCW examiner

The tide is stemmed, alternately the wind, if it has stronger influence. In case the two are from slightly different directions, as shown, the weather anchor is let go with engines going dead slow ahead. The engines may be stopped as required, maintaining the headway. The anchor cable is continuously paid up to say 9 shackles (the total of the final shackle lengths). The vessel will tend to stop due to the springing back or slackening of cable. This will be also due wind and tide which were stemmed. Now, the lee anchor is let go and the cable paid out. The slack on the weather anchor cable is picked up as the vessel drops astern. The vessel may need astern propulsion to move astern. Once the vessel has reached the position, (half way between i.e. 4.5 shackles on each cable) the lee anchor becomes the riding cable. Suppose the container reaches destination and the receiver opens the container to find there are only 700 bags instead of 750 bags as per example below, natural instinct would be to hold the shipping line responsible just because they carried the cargo. The cargo, the quantity and the weight inside the container are not known or verified by the shipping line (although the SOLAS VGM may be proof of the weight) because they are not involved in the packing of the container. With the saildrive, the weight of a shaft, stuffing box, and propeller are moved forward, almost under the engine. Further, the propeller’s angle of attack is more parallel to the surface of the water, which will enhance efficiency and help to minimize traditional prop-walk characteristics common to conventional drive configurations.

SART (=Search and Rescue Transponder; sart) (n) (navig, safety) A SART is a portable battery powered radar transponder which operates on “x-band or 3 cm radar”. A SART is a self contained, waterproof radar transponder intended for emergency use at sea. The radar-SART is used to locate a survival craft or distressed vessel by creating a series of dots on a rescuing ship’s radar display. https://officerofthewatch.com/tools/maritime-dictionary/; SAR transponders (SARTs) are used for locating survivors by SAR units and their signals are also to be considered as a distress alert. The SART
SAR unit should normally be taken to the survival craft when abandoning a vessel. (CAMSAR II – Mission Coordination) **transponder za traganje i spašavanje:** In the GMDSS (Global Maritime Distress and Safety System), certain classes of vessel must carry a SART. **SARTs** transmit in the X-band (3 cm) radio frequency used by common aeronautical and maritime radar. The signals are detected at various distances depending on scanner height, tuning and bandwidth of the radar. CAMSAR II – Mission Coordination **detuning of SART** resetiranje SART-a (kad je SART vrlo blizu broda)

http://www.atlanticrt.com/safety/epirbs/sart/mcmurdo-s-4-sart-radar-transponder-86-300-001a.html (In an emergency situation when the SART detects the incoming radar pulse from a searching aircraft or ship it responds by transmitting a distinctive signal which shows up on the radar screen of the searching vessel as a series of 12 blips extending approximately 8 nautical miles outward from the SART’s position along its line of bearing.)

English name for marine sparid fishes. The Sparidae family is also known as *porgies*. These fish have certain distinctive features that make them easily identifiable. First, their bodies are relatively flat. The line from the dorsal area to the front of the fish descends very rapidly giving the face a flattened appearance, especially when viewed in profile. Their color varies widely from species to species, mainly depending on water type and environment. In brackish waters, for example, the fish tend to be darker, with shades of blacks and grays to help them blend in with the environment. Some fish, in other areas, even have a bright red appearance, showing how diverse members of the family can be.

seaway bill (=Sea Way B/L) (n) (mar law) = waybill A seaway bill is a receipt of goods issued by the ocean carrier to the customer (also called the consignor or shipper). It is a contract by which the ocean carrier undertakes to transport the customer's cargo in its vessel or vessels, from one point to the other. (https://www.marineinsight.com/maritime-law/what-is-seaway-bill-in-shipping); a type of bill of lading used for port-to-port or combined transport carriage

(http://www.maerskline.com/en-jm/help/shipping-glossary; Sea Waybills are not documents of title, so that the holder does not necessarily have ownership of the goods. Sea Waybills are increasingly used
instead of Bills of Lading: they are simpler, which helps, e.g., when only short sea crossings are involved, or for regular shipments to established customers whose creditworthiness is not in doubt. Seaway bill takes the same form as B/L but is a non-negotiable receipt and not a document of title. Frequently used in the container trade. **pomorski teretni list**: A waybill is identical to a negotiable bill of lading except that it is not a document of title. There are no originals issued for this type of document. When a shipping document is issued to a “named” consignee and it is not a document of title, it may be considered as a “Sea Waybill”.. **Sea Waybill of Lading** is a NON-NEGOTIABLE & NON-TRANSFERABLE DOCUMENT. When a shipping document is issued to a “named” consignee and it is not a document of title, it may be considered as a “Sea Waybill”.. The seaway bill is usually preferred by companies that deal directly with each other on a regular basis. A seaway bill will show a consignor and a single consignee who can receive the goods at the port of discharge. The seaway bill is usually issued in triplicate – the original and second copies are given to the shipper or consignor, and the third to the consignee. The main difference between a seaway bill and a bill of lading is that while the former is non-negotiable, the latter is negotiable. The seaway bill is a non-negotiable document which can only be made out to a named consignee. Therefore no surrender of the document by the consignee is required.

ship design (=design) (n) (nav arch) The ship design process may be broken down broadly into two stages: Conceptual and/or preliminary design and detailed or tender or contract design. The preliminary design process will normally take the form of a techno-economic appraisal, using a fundamental engineering economy approach. The ship owner’s operational requirements need to be established during preliminary designing, which then allows the development of a basic specification such as deadweight, speed, range, capacity, stability, and freeboard.

External Factors/forces that the ship handler must take into account are: tide, Sudden change in wind velocity and direction (gust), set and drift, proximity of other ships, depth of harbours or waterways;

ship handling (n) (navig, seamanship) = manoeuvering the art of proper control of a ship while underway, especially in harbours, around docks and piers; ship handler's control of ship's motion, understanding and competence in responding to physical forces acting upon the ship and motions of the ship, ship's hydrodynamics and aerodynamics in all weather, tide and current and wave conditions

rukovanje brodom, manevriranje: (As per IMO STCW 2010) ship handlig includes: 1. Manoeuvring the ship when approaching pilot stations to embark or disembark the pilot, taking account of weather, tide, distance to travel and stopping distance , 2. navigating a river, estuary and confined waters, allowing for the effects of current, winds and shallow water on the actions of the helm, 3. turning the ship at a constant rate, 4. manoeuvring in shallow waters, allowing for the reduction in under-keel clearance caused by squat, roll and pitch, 5. handling the interactions between ship and river banks (bank effects), 6.
berthing/docking and unberthing/undocking under all wind, tide and current conditions, with or without a tug. 7. handling interactions between ship and tugs, 8. being able to use ship’s propulsion systems and manoeuvring systems, 9. choosing a mooring; to moor using one or two anchors; to assess the various factors that determine the length of anchor chain to drop, 10. to be able to notice an anchor dragging, and know how to release a fouled anchor, 11. to be able to enter a dry dock, when damaged or undamaged, 12. to be able to sail and manoeuvre in bad weather, including coming to the assistance of a ship or aircraft, to be able to carry out emergency towing operations; 13. to be able to manoeuvre with care in order to launch lifeboats and to release survival gear in bad weather, 14. to be able to winch survivors on board from rescue craft or liferafts, 15. to be able to assess the manoeuvring characteristics of the main types of ship (stopping distances, turning circle at different speeds and draft, 16. to be able to sail at reduced speed to avoid damage being caused by other ships by bow wave or wake, 17. to be able to take necessary precautions when sailing in ice, or when ice is accumulating on board, 18. to be able to sail close to or within traffic separation zones, and in zones covered by the VTS. The most basic thing to be understood in ship handling is to know and anticipate how a ship behaves under all circumstances and what orders should be given in order to make the ship behave and move exactly the way you want her to.

**single-point mooring** (=SPM) (n) (navig) the single point mooring buoy consists of a buoy that is permanently moored to the seabed by means of multiple mooring lines; An SPM is a loading buoy anchored offshore that serves as a mooring point as well as an interconnection for tankers loading or offloading liquid products. sidrenje (privez) na jednu točku (sidro ili plutaču): shuttle tankers have been specially designed to load at the bow from a single point mooring at sea. Single Point Mooring (SPM), also known as mono-mooring or bow mooring, means the tanker is moored at the bow, using one or two hawsers to a buoy or tower. This had little effect, and the ship drifted beam on to the wind, eventually striking the SPM buoy aft of amidships.

(The two main types of SPM are Catenary Anchor Leg Mooring (CALM) and Single Anchor Leg Mooring (SALM). CALM the most common, where a large buoy held in place by more anchor cables that extend in catenaries to anchor points some distance from the buoy. The SALM system is similar, except that the SALM is anchored by a single anchor leg. (http://www.marimatech.com/products/offshore))

www.motorship.com/_data/.../White-Paper.Shipping-in-the-2020-era_Pre-final.pdf Many ship owners have already opted for SOx scrubbers in their newbuildings, because the additional price for low sulphur fuel oils has, at least historically, been considerably higher than for conventional fuel.
www.motorship.com/_data/.../White-Paper.Shipping-in-the-2020-era_Pre-final.pdf The use of SOx scrubbers may look like the “easy alternative”, but when the actual consequences of higher hotel loads, additional costs for chemicals (NaOH) when operating in closed loop mode, and sludge disposal are considered, it is not that easy.

stability curve

explained by the general expression of metacentric height: \( GM = KB + BM - KG \). The explanation of reduction in stability can be done in two ways, which is exactly what we will study in this article, but at a later stage. For now, it should suffice to understand that when a ship is flooded, it results in a change of \( KB \) and \( BM \) values. The \( KB \) rises due to flooding, and it may rise further due to change in the ship’s trim. However, there is a significant reduction in \( BM \), which is a function of the area moment of the ship’s water plane. Why? We will look into that when we study the Lost Buoyancy Analysis.

\( \{ GM = \text{metacentric height}; KB = \text{Centre of Buoyancy}; BM = \text{Metacentric Radius} = \text{distance from the keel to the metacentre} = \text{distance from the vessels center buoyancy to the keel}; KG = \text{Centre of Gravity} \} \)

Submerged Turret Loading (STL) system

The basis of the Submerged Turret Loading system is the buoy moored to the seabed. The buoy is pulled into and secured in a mating cone in the bottom of the vessel and thus connecting the mooring system. Internal in the buoy is the turret to the mooring and riser systems. The outer buoy hull can rotate freely with the vessel around the turret by means of internal turret bearings. Oil is transferred through an in-line swivel via the loading manifold to the piping system of the vessel. Disconnected, the buoy will float in an equilibrium position ready for new connection.

Corrections or changes to an original bill of lading calls for issuing another set with the correct details on it by way of a switch bill of lading. While some very minor alterations are endorsed on the original bill of lading itself, there may be other changes that require the issuance of a fresh set. These include changes to the port of discharge, the buyer or receiver, the description of goods to include its full details or certain specifications, or the trading terms. Any of these pre-agreed points may have changed while the goods are in transit. When any of these cases occur a fresh bill of lading is issued and therefore called a switch bill of lading.

time charter party (mar law) A time charter party is a contract whereby the lessor (the shipowner or demise charterer) places a fully equipped and manned ship at the disposal of the lessee (the time charterer) for a period of time for a consideration called hire payable at specified intervals during the term of the charter.

brodarski ugovor na vrijeme (EUDict), ugovor o najmu broda na vrijeme, ugovor o iskorištavanju broda na vrijeme: In Time Charter Party agreements, the charterer may only assume responsibility for operations, routing and cargo, while technical, crewing etc. remain with the owner.

time charter rate (=TC rate) (n) (shipping econ, mar law) the daily rate the ship owner receives for operating a vessel under a time charter agreement, and is denoted in USD/day

Rising TC rates give a brighter outlook for the dry bulk industry and vice versa. TC rates for dry bulk vessels have fallen considerably over the last few months. Panamax and Ultramax one-year TC rates have fallen by 38% and 39%, respectively, to $5,000 and $5,200 per day.

During a short sea passage on a twin-engined ship, a motorman was cleaning around the turbo/blower of one of the main engines. Turbochargers of Marine Engines are important part of the system as they utilise the waste heat of the exhaust in order to supply charge air for scavenging of the engine. The equipment consists of turbine and blower attached on the same shaft.

If the blower side cleaning is not carried out properly, then the supply of air to engine will be reduced, resulting in lack of air and improper combustion with black smoke. The Blower side of turbocharger is cleaned by fresh water. The engine is run at its full load rpm to achieve best possible

Type A tank (n) (nav arch) Type A tanks are prismatic tanks of the atmospheric type, containing flat panels and external insulation. tank kategorije A, A-tank: Originally developed for liquefied petroleum gas (LPG) carriers, Type A tanks have since also been approved for use onboard LNG carriers. (https://marine-offshore.bureauveritas.com/) The key concern when using a Type A tank for LNG is temperature: LPG can be kept at -50°C during transportation, while LNG requires a minimum temperature of -160°C. Type A tanks must therefore install a complete secondary barrier made of appropriate insulation material that goes all around the tank. https://marine-offshore.bureauveritas.com/
Type B tank (n) (nav arch) Type B tanks are prismatic or spherical tanks used primarily for mid-sized and large LNG carriers. Vessel Traffic Service (=VTS; vessel traffic services) (n) (navig, safety) Vessel traffic services deal with managing ship traffic on marine routes, suggesting best routes for a vessel and ensuring no two vessels run into each other on congested routes.

Vessel traffic services - VTS - are shore-side systems which range from the provision of simple information messages to ships, such as position of other traffic or meteorological hazard warnings, to extensive management of traffic within a port or waterway.

About 30 seconds before the collision Vessel Traffic Services (VTS) intervened to warn both vessels that they were running into danger but no response was received. The most commonly used sensing components of vessel traffic services are: 1. Radar system; 2. AIS; 3. Radio direction finder The purpose of a Vessel Traffic Service (VTS) is to provide active monitoring and navigational advice for vessels in particularly confined and busy waterways. There are two main types of VTS, surveilled and non-surveilled. Surveilled systems consist of one or more land-based sensors (i.e. radar, AIS and closed circuit television sites), which output their signals to a central location where operators monitor and manage vessel traffic movement. Non-surveilled systems consist of one or more reporting points at which ships are required to report their identity, course, speed, and other data to the monitoring authority. https://www.navcen.uscg.gov/?pageName=vtsMain
Vessel Traffic Service Area (n) (navig, safety) Područje službe nadzora pomorske plovidbe: Generally, ships entering a VTS area report to the authorities, usually by radio, and may be tracked by the VTS control centre.

Vessel Traffic Service Operator (=VTSO) (n) (comm, safety) operator službe nadzora pomorske plovidbe, dežurni službenik službe nadzora pomorske plovidbe: The VTSO informed him that the container feeder vessel had broken down.

The Victories could carry 10,850 deadweight tons (the weight of cargo a ship can carry) or 4,555 net tons (the amount of space available for cargo and passengers), a larger load than the Liberties could manage. Victory ships typically carried a crew of 62 civilian merchant sailors and 28 naval personnel to operate defensive guns and communications equipment. The Victory ships were different from the Liberty ships primarily in propulsion, the steam engine of the Liberty giving way to the more modern, faster steam turbine. The Victory ships had engines producing between 5,500 to 8,500 horsepower. Their cruising speed was 15-17 knots (approximately 18.5

Systems facilitating safe and efficient vessel traffic movement to or from ports, or within restricted sea areas adjacent to the coasts of states, under which ship traffic is subject to the supply or exchange of information, or the giving of advice or instructions, by coastal stations. On November 27, 1997, the International Maritime Organization (IMO) adopted Resolution A.857(20), entitled Guidelines for Vessel Traffic Services. That Resolution defines a V.T.S. as a service implemented by a Competent Authority, designed to improve the safety and efficiency of vessel traffic and to protect the environment. The service should have the capability to interact with the traffic and to respond to traffic situations developing in the V.T.S. area. (http://www.clarksons.com/glossary/); Worldscale is a nominal worldwide tanker scale used to establish payment of freight services; Nominal freight scale applying to the carriage of oil and oil products in bulk by sea. An international freight index for tankers that provides a method of calculating the freight applicable to transporting oil by reference to a Standard Vessel on a round trip voyage from one or several load ports to one or several discharge ports. (www.worldscale.co.uk) medunarodni indeks tankerskih vozarina, međunarodna tablica tankerskih vozarina, Worldscale: The flat rate point 100 is effectively the breakeven point in accordance with the basis of calculation for the Worldscale Standard vessel but not for any other size. Worldscale includes expenses associated with ports, transit fees, port and voyage time and vessel bunker costs assessed in relation to the
Worldscale Standard Vessel basis of calculation in order to produce a comparative nominal freight scale reported in dollars per tonne. Worldscale is used to calculate freight rates for oil tankers and product carriers. It is a tanker chartering tool, its principle is to provide the ship-owner with the same net return per day irrespective of voyage performed for the Worldscale Standard Vessel at WS100. **Worldscale rates** 

*vozarni stavovi izračunani prema tablici Worldscale:* **Worldscale Rates** are based upon a 75,000 tonne total capacity vessel performing a round voyage and expressed in dollars per tonne of cargo. Any new **Worldscale rate** request will require mileage calculations, any voyage costs and port cost information. Rate calculations may involve several different route options to determine the cheapest. The final rate agreed will be determined as a percentage of the 'Worldscale' rate, based upon a guaranteed minimum quantity of cargo. This allows for charter parties to cover a wide range of possible voyage options without the need to calculate and negotiate each one separately. www.euronav.com

Yachts are differentiated from working ships mainly by their leisure purpose, and are basically fancy houseboats. However, since the level of luxury on larger yachts has seen an increasing trend, the use of the word yacht to mean any sailing vessel has been diminishing and is more and more limited to racing yachts or cruising yachts. Yacht lengths generally start at 32-35 feet (10-11 m) and go up to hundreds of feet. A mega yacht generally refers to any yacht (sail or power) above 100 ft (34 m) and a super yacht generally refers to any yacht over 200 ft (70 m). This size is small in relation to typical cruise liners and oil tankers. (SeaSources.net)
