Apart from the BDN, the PSC will check the soundings of the tanks where the low sulphur fuel is kept or where the HSFO is kept for ships with exhaust gas scrubber.

The recent tightening in HSFO markets has been caused, to a large extent, by a notable reduction in the supply of HSFO. “There is no more demand for 380 CST [HSFO bunkers] on the ex-wharf side, mainly because most delivered bunker demand is now shifting to lower sulfur fuel,” a Singapore-based fuel oil and bunkering source said.

A system of hydraulic outlets, each with an isolating valve, is located around the ship and hoses with the appropriate snap-in connectors are strategically located. Moreover, all the hydraulic outlets are provided with an isolating valve so as to isolate those valves which are not in use.

While carrying out routine maintenance of a fire hydrant in the engine room, a crew member decided to use a wheel key spanner to free up the stiff valve.

Return lines are not designed to take high pressure in most hydraulic systems. Before arrival in extreme cold conditions, hydraulic systems should be carefully inspected, system oil confirmed to be at optimum levels, and condition and oil filter elements renewed or cleaned.

Steering gears can be arranged with hydraulic control equipment known as a 'telemeter', or with electrical control equipment. In principle, this consists of the ME engine hydraulic control oil system and an ELGI valve.

The fire pump was inspected, system oil confirmed to be at optimum levels, and condition and oil filter elements renewed or cleaned.

Governor The engine revolution per minute is controlled by a hydraulic governor.

Above the cargo discharge pipe a hydraulic hose was found to be leaking from an end fitting.

The team, led by the C/E, and comprising of the 3/E, J/E and an OS, entered the hydraulic machinery room and started the main pump motor.

The Chief Engineer instructed the motorman to go to the steering gear flat and mop up a small quantity of accumulated leaked hydraulic fluid.

The fire pump was in operation to provide cooling water for the windlass hydraulic drive system.

The AB went round to the starboard hydraulic control platform and could not find the chief officer.

At engine loads above 50 per cent of the optimized power, the power turbine is connected to the crankshaft via a hydraulic clutch and flexible coupling.

ignite  /ɪɡˈneɪt/  (v) (marine eng, safety) zapaliti se, upaliti se (motor): The compressed
air from the bottle is necessary to ignite the fuel. The starboard cargo engine (its lever left in the ON position) must have developed high pressure in the cylinder causing the safety valve to crack open and ignite the flammable gases in the engine room. If the impact had been more direct, the steel plate could have pierced the tank, and also provided the energy to ignite the flammable mixture of fuel vapour and air which would have formed within the truck’s empty tanks. The cargo was liable to self-heat and ignite spontaneously because it contained fine shavings contaminated with cutting oil, cast iron borings and organic flammable materials. Unfortunately, the junior engineer succeeded in his attempt to ignite the boiler and the residual fuel ignited explosively.

\textbf{ignition} /ɪɡˈnɪʃn/ (n) (marine eng) \textit{paljenje, zapaljenje}: Better still, the electrodes should have been bench tested away from all sources of ignition. The source of heat for ignition comes from piston blowby, slow ignition and afterburning, or excessive exhaust back pressure, which causes a blowback through the scavenge ports. The engine room fire was probably caused by the ignition of lubricating oil that sprayed from a fatigue-fractured fitting on one of the main engine’s pre-lubrication oil pumps onto the hot surface of the main engine’s exhaust manifold. \textit{spontaneous ~ samozapaljenje, ~ system uređaj za paljenje, ~ timing tempiranje paljenja, ~ switch prekidač paljenja, ~ control upravljanje paljenja, ~ temperature temperatura paljenja:} The ignition temperature for this type of oil mist can be extremely low, depending on the type of oil being atomized. \textit{~ delay zakašnjelo paljenje, odgođeno paljenje:} High-aromaticity fuels cause increased ignition delay in some cases. \textit{~ pressure tlak paljenja:} The air-blast pressure, which was only just slightly above the ignition pressure in the cylinder, was produced by a water-cooled compressor driven off the engine connecting rod by means of a rocking lever. \textit{~ system sustav paljenja:} Once the ignition system was reassembled, it was tried again; but still to no avail. It was then decided to test for a spark at the end of the electrodes. \textit{activate ~ aktivirati paljenje: As the ignition was activated and the fuel sprayed from the open ended pipe, a fire erupted, ... ~ cause ~ prouzročiti paljenje, izazvati paljenje, dovesti do paljenja:} Possible heat sources causing ignition include heat exchangers, exhaust pipes, turbochargers, electrical contacts, static electricity and faulty wiring. \textit{source of ~ izvor paljenja, uzrok paljenja:} The source of ignition for these explosions can be attributed to one of the following: - A leaking air start valve. \textit{~ quality kvalitet paljenja:} Damage due to poor ignition quality fuel can be prevented by injection control (pre-injection). \textit{spontaneous sponrtano zapaljenje, samozapaljenje: The lack of an effective guard allowed fuel to spray onto the adjacent turbocharger and/or exhaust piping causing spontaneous ignition. ~ lead to ~ dovesti do paljenja / zapaljenja: The low spontaneous ignition temperature of the liquid fuel leads first to ignition of the diesel fuel and then to ignition of the air–gas mixture. \textit{self-~ samozapaljenje:} To prevent the risk of self-ignition, the following precautions should be taken as laid out in the Code of Safe Practice for Solid Bulk Cargo 2004. ... and a fine spray of hydraulic oil began falling on the hot surfaces on the top of the exhaust manifold and ignited after attaining self-ignition temperature. \textit{~ lag kašnjenje paljenja I.L.O. Međunarodna pravila o prijevozu opasnih stvari morem:

It is of great concern that there is still evidence of non-compliance with the IMDG Code. The correct bulk cargo shipping name (BCSN) for the International Maritime Dangerous Goods (IMDG) class 4. However, if such action is not in accordance with the guidance provided in the IMDG Code Emergency Schedules (EmS), the possibility of injury to personnel, harm to the environment, and damage to the vessel is increased considerably ... An engine indicator is used to calculate the indicated power of the engine, and this is connected to the indicator cock. The engine indicator is operated as the engine fires when running normally. The cock is shut before disconnecting the engine indicator.

The indicator cock is opened when the engine is being turned over by the turning gear and, when being started for the first time after being shutdown to blow out any water or debris from the cylinder. The cock is then shut for normal running. Cylinder heads for 4 stroke engines are of a complex design. They have to house the inlet and exhaust valves, the fuel injector, the air start valve, relief valve and indicator cock. The passages for the inlet air and exhaust gas are incorporated, as are the cooling water passages and spaces. The fire was the result of a defective high pressure fuel pump spraying fuel over a hot indicator cock on a cylinder head.
indicator diagram (n) (marine eng) indikatorski dijagram: The indicator diagram is very important to know the combustion in the cylinder and also to adjust the engine. Indicator diagrams give efficiency of combustion in the cylinder, condition of the running gear, irregularities in fuel pumping and injection and a lot of things. The main engine indicator cocks were left open, the turning gear disengaged, the air receiver valves and main air start valve were shut, and the lubricating and cooling water pumps were left running. The indicator cock is opened when the engine is being turned over by the turning gear and, when being started for the first time after being shutdown to blow out any water or debris from the cylinder. The cock is then shut for normal running. Watch-keeping duties include checking the cock is not leaking exhaust gas, if it is a temporary cap can be screwed on, and the cock replaced at the first opportunity at next shutdown.

inert gas (=IG) (n) (cargo handling, safety) A gas such as carbon dioxide or nitrogen that is used to make an oxygen deficient atmosphere. Inerted tanks are useful for preserving cargo integrity and reducing the explosive potential of cargo tanks.

https://officerofthewatch.com/tools/maritime-dictionary/; An inert gas is one which has little or no ability to react with other gases, or to heat (e.g. nitrogen and CO2) (www.euronav.com) inertni plin: Carriage is only permitted under an inert gas blanket; The ventilation from an IG (inert gas) blower was on but the IG inlet was opened on all cargo tanks. Three levels of service can be provided: an information service (INS), a navigational assistance service (NAS) and a traffic organisation service (TOS). The VTS Information Service gave regular traffic broadcasts on the port operations VH radio channel.

The coastguard helicopter arrived within 5 minutes and, using the onboard infrared (IR) equipment, was able to identify to the skipper that the seat of the fire was in the starboard corner of the engine room.

The Port Authority is investing heavily in infrastructure at its container terminals and other facilities and will continue to deliver a high level of service to all carriers. There were no injuries or pollution, but damage was caused to infrastructure on the quayside and the vessel’s hull in way of empty ballast tanks. This resulted in the vessel making multiple contacts with the jetty’s infrastructure, resulting in material damage to both the jetty and the vessel before control was regained. The port authority commends government for its investment in infrastructure projects that will address transportation challenges along Canada’s trade corridors, improve the movement of goods through the port, and help ease the impacts of growing trade on local communities. https://www.maritimeprofessional.com/news/federal-funding-port-vancouver-317672

To ensure safety of personnel and port infrastructure, we emailed a request to the overseas shipper asking for a document stating the actual weight of each unit as shipped, involving loss of control of large vessels during times of strong tidal flow, resulting in contact damage to vessels and shore infrastructure.

Check if the inert gas system (IGS) is fully operational and in good working order. Arrangements (pilot ladder, accommodation ladder, winches, wires, davits, sheaves and all associated equipment) have been thoroughly inspected and are in good working order, and comply with IMO recommendations. In addition to authorised service personnel, crew have equal responsibility for ensuring that lifeboats are in good working order and are maintained and operated properly.

The forward void spaces were also reported to have water ingress.

This points out the dangers inherent in false information from ARPA at low ranges and fast moving vessels in these close quarter situations. The risks inherent in all lifting operations, including the launching of watercraft, must be rigorously assessed and safe working practices developed. ~ vice skrivena mana

ISPS code (=International ship and port facility security code)  (n) (mar law, safety) Međunarodni pravilnik o sigurnosnoj zaštiti brodova i lučkih postrojenja: Additionally, leaving a secured pilot ladder hanging over the side is clearly a breach of the ISPS Code and leaving a slack length on deck is very unseamanlike and irresponsible. Moreover, beyond mandatory reporting areas, and to comply with the ISPS Code, IMO needs to be of the opinion that masters would normally be expected to isolate AIS. ISPS assigns responsibilities to governments, shipping companies, shipping personnel, and port/facility personnel to detect security threats and take preventative measures against those threats affecting ships or ports used in international trade.

The camshafts are of modular construction with single-cylinder sections joined by bearing journals.

One person went to the wheelhouse to join the skipper who, having raised the alarm, was collecting lifejackets from the cabin. The master was alone on the bridge until he was joined by the berthing pilot. By nightfall, several vessels joined in the SAR operations.

There is a metallic joint, a copper or soft iron ring, interposed to make a seal. A thick section mild steel ring makes the gas joint between the liner and cylinder head. Studs should be evenly tightened so that a satisfactory joint can be provided.

Thanks to the double lap joint, the pressure drop will be almost constant irrespective of the wear on the liner and rings. But, the steering cable ball joint became disconnected from the outboard engine frame, and the engine turned hard to port. The steering cable had been replaced using an outdated...

land (n) (navig, mar law) ANTONYM board: iskrcati se (član posade, putnik, peljar), iskrcati (nekoga): I sailed out straight into a typhoon, and after two days, had to deviate to land a sick engineer. The intention was to seek a sheltered anchorage, where it would have been possible to land the passengers with the vessel’s tenders onto an appropriate beach. ~ the pilot

iskrcati peljara: 3. All vessels subject to compulsory pilotage shall, when entering or leaving the harbour approaches, board or land their pilot in the vicinity of Breaksea Light Float (51° 20' N, 3° 19’ W)
Inexplicably the pilot failed to execute the 'wheel-over', leaving the vessel heading directly for the land. At lunchtime, the skipper decided to head in to land and re-store, and elected to take the 6-hour navigation watch back to port. Although other vessels, with AIS receivers, were in the vicinity at the time, no one alerted the vessel until she was very close to land. Due to a deep depression producing severe gales, the vessel remained within the lee of the land for most of her voyage. The vessel started to drift back towards the land. In this case, the ship's limited engine power gave the master little choice other than to anchor in the shelter of the land.

They also cannot accept the fact that they have to land large amounts of slops to shore facilities as this costs them money. A Hard Day’s Night Narrative In the early hours of the morning, a Vivier crabber ran aground as she returned to port to land her catch after a 6-day trip. Soon after the vessel finished mooring the vessel's crew were occupied with landing an electric motor. ~ the cargo iskrcati teret

Before he could shout a warning, the trolley, weighing over 400kg, twisted off the gantry and fell about 7.5m, landing on the ship's guardrail. Luckily, none of the seven people who were standing nearby were injured. Suddenly, he slipped and fell, landing about 8.5 metres below on top of a container in the cargo hold.

Achieving zero emissions may dictate shutting down all engines and boilers during a port stay, and plug-ling into a land-based electrical supply system. It is the geometric center of the waterline plane. udaljenost centra plutanja od sredine broda: LCF can be calculated if the exact shape of the waterplane is known or it may be obtained from the curves of form.

**LCG** (=longitudinal center of gravity) *(n)* *(stabil)* LCG is the longitudinal distance between center of gravity and frame #0. udaljenost sistemnog težišta od sredine broda (od glavnog rebra broda): The longitudinal position of the center of gravity is measured in feet from the midships.

**LCL** /'el si: el/ (=Less than container load) *(n)* *(mar law, shipping econ)* COMPARE F.C.L. = less than container load Less than Container Load refers to the freight forwarders shipping product where cargo from multiple customers is consolidated into one standard marine container. (https://www.transporteca.com/lcl-less-container-load/); Here the carrier takes the goods from two or more shippers, packs them into the container and seals it.

http://www.mindserpent.com/American_History/reference/Tetley_admiralty/Tetley_2004.htm; Common term for an amount of goods to be shipped and which do not fill an entire container (http://www.maerskline.com/en-jm/help/shipping-glossary); Cargo failing to qualify for freight rates given to a standard shipping container due to insufficient quantity or weight.

(http://thelawdictionary.org/less-than-container-load-lcl/); Consignment of cargo, which is insufficient to fill a shipping container. It is grouped with other consignment for the same destination in a container at a container freight station. (http://www.leewardcorp.com/es/); Consignment of cargo, which is insufficient to fill a shipping container. It is grouped with other consignment for the same destination in a container at a container freight station http://www.thmglobal.net/chartering_L.HTM; LCL (less than container load) is a mode of shipping via ocean. If you don't have enough cargo to fill up an entire container, consider shipping LCL. (https://www.flexport.com/glossary/less-than-container-load/)

zbirni kontejner (kontejner s robom koja glasi na više različitih
primatelja): Ocean rates for LCL are commonly higher on a per-unit basis than for a full container load. Thus, consolidation of several LCL loads from different places or shippers into a full container can save on costs. **Less than Container Load (LCL)** is a service offered by freight forwarding companies, allowing shippers to book only part of a container. The smallest standard marine container carries a volume of 33 cubic metres or a weight of 28 tons — so an LCL service should be considered for any shipment considerably smaller than this. With an LCL shipment, you pay for your load to be shipped in a container with one or more loads from other customers of the freight transport provider. LCL lets you ship in smaller volumes so that you can keep your inventory lean. Instead of purchasing large quantities from suppliers, you can use LCL to keep a steady flow of inventory in smaller quantities. That frees up cash flow for other purchases. When an FCL shipment arrives at port, it’s unloaded from the vessel and delivered to the buyer. It’s more complicated for LCL: someone has to consolidate different shipments, process multiple documents per container, and then sort goods for each customer.

**LCL consolidated by Consolidator** (n) (logist, shipping econ) zbirni teret za kontejnere koji prikuplja konsolidacijsko skladište: In the case of consolidation cargo, the consolidators issue their House Bills of Lading to the shippers and secure a Master Bill of Lading from the shipping line for the container which is booked with the line as an FCL and which will show them as a shipper on the lines bill of lading.

leading lights (n) (navig) = leads A pair of lights or day marks deliberately placed to mark a narrow channel. svjetla pokrivenog smjera, pokriveni smjer, Italian: allineamento d'ingresso: The ferry passed to the north of the fairway buoy, and about 15 minutes later, was still about 0.5 cable north of the intended track of 236°, indicated by leading lights. At this point, the master altered course about 25° to port, to bring the ship further south. As they progressed in the gyro was checked against leading lights and found to be out by up to 8°. In this case, a suitable passage should have consisted of setting a course that ensured the vessel was in the safe sector of the leading light at least 1 mile from the harbour entrance. While still looking for the leading lights, the OOW glanced at the echo sounder and noticed that the water depth was decreasing.

leading line (n) (navig) On a nautical chart, a straight line, drawn through leading marks. A ship moving along such line will clear certain dangers or remain in the best channel.

crta pokrivenog smjera: On a nautical chart, a straight line, drawn through leading marks. A ship moving along such line will clear certain dangers or remain in the best channel.

leading marks (n) (navig) oznake pokrivenog smjera: It was a very hazy afternoon and the two leading marks of the main channel were obscured shortly after passing the front marker. lee /liː/ (n) (meteorol, navig) a downwind area of the sailboat/ship or on the side of it; an area sheltered from the wind zavjetrina: The pilot boat came on the lee side, because the prevailing 20 knot wind, sea conditions were fairly rough and cold. A deep sea fishing vessel’s main engine stopped at a critical moment after she had been sheltering from severe weather for almost 2 days in the lee of an island. Due to a deep depression producing severe gales, the vessel remained within the lee of the land for most of her voyage. on the ~ u zavjetrini, the ~ of the breakwater zavjetrina lukobrana, zavjetrina lukobrana, make a ~ pružiti zavjetrinu: Make a lee on your port side / starboard side. (IMO SMCP) The pilot boat was having difficulty coming alongside in the waves so the pilot, now on deck, requested the Master change course to 180° and then to 160° to make a lee., provide a ~ pružiti zavjetrinu: ... the pilot boat became aware of the high speed on approach, and called the vessel to slow down and swing to starboard to provide a lee for boarding., ~ shore obala u zavjetrini: The master chose to remain at anchor when gale force winds onto a lee shore were forecast., create a ~ pružiti (peljarskom brodu) zavjetrinu: The master then turned his ship %to create a sheltered area on the lee side to make it easier for the sea pilot to board.

leech /liːʃ/ (n) (sailing/boating/yachting) the back edge of a sail; the aft or trailing edge of a fore-and-aft sail; the leeward edge of a spinnaker; a vertical edge of a square sail stražnji rub jedra, stražnji porub jedra, ventana, ventam, Italian: balumina: The sheet exerts a large downwards force on the leech of the sail when the boom is directly above it, much more than the kicker. The kicker controls leech tension and twist when the boom has passed to leeward of the traveller. A series of telltales along the leech of the main should flow evenly. Most boats benefit from a
boom vang, which keeps tension on the mainsail's leech.

leech  (n) (sailing/boating/yachting) stražnji rub floka / špinakera: the trimmer set the jib to her normal setting and observed the jib leech telltale flowing 100 percent of the time.

leech cord  (n) (sailing/boating/yachting) = leech line ventam, konopac stražnjega poruba jedra, majolica: The leech cord is really not a sail trim devise. It's main purpose is to stop the leech from fluttering BUT it does have some sail trim advantages. The leech cord on a mainsail can also be used to fine-tune leech twist.

leech line  (n) (sailing/boating/yachting) konopac stražnjega poruba jedra, ventam; ventan; majolica; dušica: Tension on the leech line supports the edge of the sail to keep it from fluttering. Most new sails today come with leech lines built-in, particularly on larger sailboats.

lee helm  (n) (sailing/boating/yachting) ANTONYM weather helm list kormila više u zavjetrenoj strani; tendency of the boat with poorly trimmed sails to continually turn downwind on its own or if the helm is released skretanje kormilom od vjetra, bježanje od vjetra, zavjetreno kormilo, otpadanje, Italian: barra sottovento: Moving the sails' center of effort forward of the center of lateral resistance tips the scale in the other direction and forces the bow away from the wind, creating lee helm. If you experience lee helm in light air, shift crew weight to leeward to heel the boat and build weather helm.

Lee-Oh!  (interj) (sailing/boating/yachting) uzbek pri zapovjedi za letanje (bordadu): Most crew sensibly take the view that lee-oh means let go the genoa sheet, which upsets those skippers who shout lee-oh at the start of the tack, and like to use the lift from the genoa generated by the rotation of the bow through the wind. The order Lee-oh is given when the genoa starts to luff.

lee shore  (n) (sailing/boating/yachting) the land to the leeward of the vessel (wind blows from the ship to the land) https://officerofthewatch.com/tools/maritime-dictionary/vjetar s mora, obala prema kojoj puše vjetar: Be alert to navigational dangers and, where possible, keep well clear of a lee shore. The master chose to remain at anchor when gale force winds onto a lee shore were forecast.

lee side ANTONYM weather side = windward side (meteorol) the side of a ship
sheltered from the wind. The side of a ship that is towards the leeward is its lee side: zavjetrina. We were sailing on the lee side of an island. The chief officer asked port control on which side the pilot ladder should be rigged, and was told “on the best lee side.” hard-a-lee means pushing the tiller hard to the lee side. When the vessel begins drifting (diagonally) leeward, water resistance is generated on the leeside of the bow.

leeward /ˈliːwərd, ˈluːərd/ (adj, adv) The direction away from the wind: prema zavjetrini, u zavjetrini, koji se nalazi u zavjetrini: When the vessel begins drifting (diagonally) leeward, water resistance is generated on the leeside of the bow. Vessel’s sideways drift leeward of the desired course. on the ~ side u zavjetrini: The vessel was at 4.30 am on the leeward side of Groix Island to embark the pilot.

; 2 boat’s leeward side is the side that is or, when she is head to wind, was away from the wind. (Racing Rules of Sailing)

leeward /ˈliːwərd, ˈluːərd/ (n, adv) (navig) ANTONYM windward zavjetrina: The sailing boat was hit by a particularly strong gust of wind which caused it to capsize to leeward. It was fortunate that the yacht grounded on a reef with safe water to leeward. The analysis conducted after the incident, using the ship’s manoeuvring and “rate of turn” data, revealed that the initial “wheel over” position was too far to leeward, given the prevailing wind strength and direction. When the wind is pushing the ship’s stern away to leeward, the stern tends to swing towards the leeward.

leeway /ˈliːˈwei/ (=LW) (adv, adj) 1 (navig) COMPARE drift: the amount of drift motion to leeward of an object floating in the water caused by the component of the wind vector that is perpendicular to the object’s forward motion; Leeway is the motion of the object induced by wind (10 m reference height) and waves relative to the ambient current (between 0.3 and 1.0 m depth). (https://zenodo.org/record/797/files/12152.pdf); The movement of a search object through water caused by winds blowing against exposed surfaces. (IAMSAR/Crmsar2014) zanos (u plovidbi, vožnji), zanošenje (u odnosu na željeni kurs): A navigator or pilot on a vessel must adjust the ordered course to compensate for the leeway drift: We are making .... degrees leeway (IMO SMCP). This allowed the westerly wind, blowing across the channel from the left, to have a greater effect on leeway. Correcting the DR position for leeway, current effects, and steering error result in an estimated position (EP). (Bowditch) Leeway and current effects combine to produce the most pronounced natural dynamic effects on a transiting vessel.
leeway divergence angle

leeway divergence angle The average angle between an object’s direction of leeway and the downwind direction. (IAMSAR/CamSAR2014)

left-hand (adj) (seamanship, navig) lijevi ~ side lijeva strana: A straight line joining the date on the left-hand side with the same date of the right-hand side represents a complete circle around the sky, the two ends of the line representing the point 180° from, ~ bank lijeva obala rijeke: Astern thrust was applied, but at the same time the wind caught the bow and the boat gently bumped into the left-hand bank of the river., ~ lay (seamanship) lijevi suk konopa, uže sukano u lijevo

left-laid (adj) (seamanship) sukan u lijevo (uže, konop)

leg (n) (navig) COMPARE waypoint the run or distance made on a single course or heading
(before changing it) dio rute (između dva mijenjanja kursa), stranica, the run or sitance made on a single tack (in sailboats): They began the final leg of their journey in poor visibility, having had a tiring voyage up-Channel. When the boat rounded the first mark, the crew members’ spirits rose as they headed downwind on the return leg. The engine rooms had not been re-visited by the time the ferry neared her berth on the return leg of the crossing at 0700. Similarly, mark each track leg’s distance under the course line with a “D” followed by the distance in nautical miles. The computer determines each track leg’s distance and, given a speed of advance, calculates the times the vessel can expect to pass each waypoint. At 1830, they passed the Needles fairway buoy and settled down
The initial leg of the voyage was uneventful, and the mate later relieved the skipper for his evening meal break.

The lead of all mooring lines was relatively short as the vessel was not berthed with her full length alongside the berth.

letter of indemnity (n) (mar law) A written undertaking by a shipper (infra) to indemnify a carrier for any liability which the carrier may incur for having issued a clean bill of lading
when, in fact, the goods received were not as stated on the bill of lading. Such a letter is usually a central
document in a fraud, whereby the shipper and carrier knowingly misrepresent to third parties the actual
order and condition of the goods at the time of shipment or the bad order of the packing, or whereby
they issue duplicate bills of lading to replace lost or stolen originals. Letters of indemnity should not be
condoned by courts and are generally held ineffective as against third parties.

To heave to at some distance from shore

Make sure you are properly trained and fully familiar with the correct way to prepare and launch the lifeboat. As the seaman descended the aft davit cradle, he probably stepped on the winch brake lever extension, instead of the ladder rung, and released the lifeboat, compelling personnel to place themselves in a dangerous position on the inclined portion of the davit roller track when securing the lifeboat. Portable pumps were transferred from the lifeboat to the trawler and the flooding was brought under control. At about 2 meters above the embarkation level, the lifeboat's forward hook accidentally opened and the lifeboat dropped. The forward end of the lifeboat fell to the water but it was undamaged and there were no injuries to the crew. The brake then opened and the lifeboat lowered a short distance until the brake again applied itself and the boat swung violently onto two angled plates at the ship's side, ... The starboard lifeboat, with three crew members on board, was unlashed and lowered to the water. Shortly afterwards, the port lifeboat was lowered. Twelve crew ran to the davit and swung off the hand brake to try to stop the lifeboat descending. 

The freefall lifeboat was inadvertently released.

While the vessel was at anchor the opportunity was taken to lower the free-fall lifeboat (capacity 16 persons) in order to test the engine, water sprays and provide training for the crew. Although untested, it was then used to hoist the lifeboat until the limit switch shut off the power.

The skipper made a distress call via VHF.
In response, the coastguard tasked an all-weather lifeboat (ALB), which went to assist.

The link between the piston and the connecting or piston rod in four-stroke engines is the gudgeon pin, sometimes referred to as the wrist pin. Each individual fuel pump rack is connected to the mechanism by an adjustable link so they can be balanced to ensure that each cylinder takes its share of the load. Allen S12 engine in-line cylinder form unit mounted on the engine gearcase connected through a collapsible link to the fuel injection pump control shaft.

Even though there is no statutory requirement for loading computer onboard other ships, classification societies require all tankers of more than 100 meters to have type approved loading instrument. There are three main documents ship should have for it to be actually
complying with Loadicator requirements. These are: 1. Class certificate for loadicator, 2. Class approved Loadicator Manual, 3. Class approved loadicator test conditions.

The ship’s loading instrument, e.g. a loadicator, is a ship specific onboard equipment and the results of the calculations are only applicable to the ship for which it has been approved. The Chief Officer needs to check all the resultant values (like GM, VCG, LCG, SF, BM) from the loadicator and compare it with approved test condition. CAMEL Loading software for Windows is a comprehensive Stress and Stability package, designed for containerships, bulkers, car carriers, tankers etc. The Loadicator is type approved by Det Norske Veritas (DNV) and other Classification Societies. The loadicator offers Damage Stability, Ballast Management and Autotrim options.

The test procedure of the loadicator includes choosing a test condition from the approved test conditions, entering the exact same data in the loadicator and comparing the results with the approved test conditions.

A chemical tanker was at anchor where her tanks were to be prepared for loading a new cargo of 50% sodium hydroxide solution, also known as caustic soda. The master therefore informed all parties concerned and stopped the loading by closing the hatches. Berth No. 3 Northern Jetty was used by the ship for discharging and loading chemical products. The accident happened because deficiencies in the
loading and securing of the deck containers were spotted but not rectified before the ship sailed. It is the duty of the Master to inform the pilot of any special conditions, difficulties, or peculiarities whatsoever pertaining to vessel which might impose hazards in connection with the handling, berthing, unberthing, loading or discharging of the vessel. The chief officer is responsible for the safe handling, loading, stowage and carriage, including the custody of the cargo throughout the voyage.

loading arm (n) (cargo) A marine loading arm, also known as a mechanical loading arm, loading arm, or mla is a device consisting of articulated steel pipes that connect a tankship such as an oil tanker or chemical tanker to a cargo terminal.

loading arm: The use of loading arms, or articulated pipe systems, to replace hoses is becoming increasingly popular, especially on bottom loading or unloading operations.

https://www.loadtec.co.uk/hoses-versus-loading-arms/ The loading arm and hose must be flanged oil-tight to the ship’s manifold so that oil spills can be avoided. Liquid cargo is nowadays usually transferred using an articulated arm loading/discharge systems, and groups of loading arms are often found on a shore refineries or on offshore loading facilities. The loading arm will be out of service for some time, resulting in financial consequences for the terminal; Mainly used in the oil and gas industry, loading arms and hoses are storage tank equipment commonly used to transfer fuel or liquid. Nowadays, a loading arm is recommended suitably for tanker loading and unloading, it is seen as the safe, fast and easy way of operation especially in the terminals.

https://candnpetroleumequipment.wordpress.com/2015/10/01/loading-arms-versus-hoses/ All loading arms are chiksans with quick connector couplings.
The ship moved away from the loading berth and started rolling. Two pilots were called to sail the loaded vessel and shift the smaller vessel onto the same loading berth.

Company that represents a shipping line at the port of loading. Its duties are to advertise the line's sailings, to obtain cargoes and co-ordinate their delivery to the ship and to sign bills of lading on behalf of the master.

The 3D Load Calculator is a tool where you can insert all the pieces you want to load in a container and see the optimal way to load it in a container; loading computers that continued to calculate a ship's stability, shear forces, bending and, occasionally, torsion moments. Many of these functions are available only if the tank / draught level gauges and the Ballast Control system is interfaced to the ShipLoad Loading Computer.

The loading programme should cover the order in which tanks are to be loaded/discharged, tank/pump/pipe work allocation and loading/discharge rates in order to minimise the stress on the vessel and the risk of cross-contamination of different grades of cargo.

Loading arms and hoses are storage tank equipment commonly used to transfer fuel or liquid. Loading hoses are hardwall, flexible, lightweight hose and can be worn in ATEX areas.

**loading instrument (=loadicator) (n) (cargo handling, stabil)** A loading instrument is an instrument, which is either analogue or digital, by means of which it can be easily and quickly ascertained that, at specified read-out points, the still water bending moments, shear forces, and the still water torsional moments and lateral loads, where applicable, in any load or ballast condition will not exceed the specified permissible values.

(http://www.iacs.org.uk/document/public/Publications/Resolution_changes/PDF/UR_S1_Rev7.pdf); a shipboard calculation tool which assists the ship’s cargo officer in: 1. Planning and controlling cargo and ballasting operations; 2. Rapidly calculating SWSF and SWBM for any load condition.; 3. Identifying the imposed structural limits which are not to be exceeded.

LOF 2000 (=Lloyd's Open Form) = Lloyd's Standard Form of Salvage Agreement. A form of salvage contract approved and published by the Council of Lloyd's to replace, as of September 1, 2000, the previous Lloyd's Standard Form Salvage Agreement (LOF 1995). The acronym LOF derives from the former name of the Agreement (Lloyd's Open Form). LOF 2000 provides for salvage services to be rendered on the principle of no cure - no pay (infra), subject, however, to the provisions of the Salvage Convention 1989 (infra) relating to special compensation (infra) and to the SCOPIC Clause

At about 1432, as the tension increased, the skipper mentioned the need to lower the mainsail, but he did not direct his instruction to anyone in particular. This is achieved by reducing the height of the scavenge ports to lower the scavenge air quantity flowing through the cylinder. The starboard hoist was therefore used to lower the pilot to the waterline and it operated faultlessly. A container feeder vessel had just berthed at a terminal for cargo operations and the seaman assigned to lower the gangway reported to the duty officer that the controls of the electrical winch motor were unreliable.

Magnetic bearing (n) (navig) an absolute bearing using magnetic north magnetski azimut: The ship’s bearing from shore on the reversed pelorus is the magnetic bearing of the shore position from the ship. Determine the range’s true bearing from a chart; then, convert this true bearing to the magnetic bearing by applying the variation listed on the chart.

Magnetic compass (n) (navig) an instrument employing a magnetized needle which aligns with the Earth’s magnetic field and indicates magnetic north (http://www.seatalks.info/cgi-bin/nautical-marine-sailing-dictionary) magnetski kompas: This magnetism is the principal cause of deviation changes of a magnetic compass. The process of neutralizing the magnetic effects the vessel itself exerts on a magnetic compass is properly called COMPASS ADJUSTMENT; but the expression COMPASS COMPENSATION is often used for this process, too. A marine magnetic compass, usually of the inverted type, frequently installed in the master’s cabin for his convenience. After 1840, British Astronomer Royal Sir George Airy and later Lord Kelvin developed combinations of iron masses and small magnets to eliminate most magnetic compass error.

Magnetic field (n) (sailing/boating/yachting, electr) magnetsko polje, magnetizirano polje: o An onboard magnetic field that is strong enough may deflect your compass and cause deviation. The strength of the field is proportional to current flow; 8 amps produce twice the deflection of 4. Boats and yachting

magnetic variation (n) (navig) angular difference between magnetic north and true north, which alters year by year as the magnetic poles move. These values of magnetic variation may be found on Chart 42, on pilot charts, and, on the compass rose of navigational charts. On NOS charts, variation is to the nearest 15', updated at each new edition if over three years old. The current practice of DMAHTC is to give the magnetic variation to the nearest 1', but the magnetic information on new editions is only updated to conform with the latest five year epoch.

magnetron /ˈmæɡnɪˌtrɒn/ (n) (electr, navig) a high power microwave oscillator in which the potential energy of an electron cloud near the cathode is converted into r.f. energy in a series of cavity resonators. Magnetron (radara): After the power is turned on and the magnetron has warmed up, “ST-BY” (Stand-by) appears, indicating the radar is ready to transmit radar pulses.

Marine engineer officers are responsible for the maintenance and operation of a ship’s main propulsion machinery and auxiliary plant, including deck machinery, air conditioning plants, refrigeration plants and domestic and electrical services.

A responsible marine engineer watch keeper has to fill the log book for his/her own watch period without fail, along with the signature of all watch keepers for their concerned watch.

Depending on the type of ship and the operational circumstances, marine engineer officers will be required to keep watches in the ship's engine room. As a marine engineer working on ships, you would be required to monitor the performance of turbochargers during the watch and carry out maintenance whenever required. The successful candidate may be awarded a diploma and will then be able to work on

Heat engines are marine propelling engines. Lloyds Register predicts that LNG will reach a maximum 11% share of marine propulsion solutions in 2030. A growing consensus says that LNG is the future of marine propulsion, while others argue that marine diesel fuel will always have its place in the mix. The steam turbine has until recently been the first choice for very large power marine propulsion units. The steam reciprocating engine, the oldest form of mechanical marine propulsion was in regular use for almost two hundred years.

NVOCC (=non-vessel-operating common carrier; ocean transportation
intermediary (OTI)) (n) (mar law) SEE house bill of lading COMPARE VOCC
COMPARE freight forwarder SEE Ocean Transportation Intermediary

A common carrier that does not operate the vessel by which the ocean transportation is provided, and is a
shipper in its relationship with an ocean common carrier.
http://www.mindserpent.com/American_History/reference/Tetley_admiralty/Tetley_2004.htm); a
common carrier that holds itself out to the public to provide ocean transportation, issues its own house
bill of lading or equivalent document, and does not operate the vessels by which ocean transportation is
provided (FMC https://www.fmc.gov/resources/ocean_transportation_intermediaries.aspx); The main
difference between a freight forwarder and an NVOCC is the responsibility. Although both companies
will track your cargo and move it through the supply chain, an NVOCC is also acting as a carrier and has
more responsibility for your cargo. (https://globalforwarding.com/blog/freight-forwarder-vs-nvocc); A
Non-Vessel Operating Common Carrier (NVOCC) is an ocean carrier that transports goods under its own
House Bill of Lading, or equivalent documentation, without operating ocean transportation vessels. Rather, an NVOCC leases space from another ocean carrier, or Vessel Operating Common Carrier (VOCC), that they sell to their own customers. An NVOCC can be described as a shipper to carriers and a carrier to shippers. (https://www.flexport.com/glossary/non-vessel-operating-common-carrier/)

pomorski prijevozn poduzetnik koji ne operira brodom (u linijskoj plovidbi), pomorski prijevozn posrednik koji ne operira brodom (u linijskoj plovidbi): A NV OCC is often termed as a “carrier to shippers” and “shipper to carriers”. https://shippingandfreightresource.com/difference-between-a-freight-forwarder-and-nvocc/

Blue Anchor Line who are one of the top 25 NVOCCs in the world and ranked No.1 NVOCC in the world in 2017. Blue Anchor Line will have various volume based space/rate arrangements with various carriers around the world, across various trade lanes. NVOCCs form the largest trade maker in the container shipping industry. It issues Bill of Ladings, assumes liabilities and responsibilities for the shipments, and may also own and operate its own or leased containers. (https://www.icontainers.com/us/2017/08/01/why-your-nvocc-should-be-fmc-licensed/) the FMC requires that the NVOCC puts down a bond of $75,000 upon registration. This provides a safety net for you should the NVOCC go out of business while having your cargo in their possession. https://www.icontainers.com/us/2017/08/01/why-your-nvocc-should-be-fmc-licensed/

Prior to Offering Services in the U.S. Trades, NVOCCs are required to submit proof of financial responsibility for payment of claims (46 CFR Part 515 Subpart C) (arising from its transportation-related activities https://www.fmc.gov/resources/ocean_transportation_intermediaries.aspx

An oil tanker, or a petroleum tanker, is a merchant ship designed for the bulk transport of oil. The grounding of the Exxon Valdez was a watershed event, triggering fundamental changes in the way oil tankers are managed, operated and maintained. There are two basic types of oil tankers: crude tankers and product tankers.

Oil tanker rates are crashing as a pact to limit global crude production begins.

Maintenance of machineries has to be carried out regularly. Considering the ship's situation, various tools, parts and materials are required to be always available onboard. Clear and good understanding of tools, parts and materials are beneficial to engineers for proper upkeep and inventory of tools.

8.1 Maintenance Tools

8.1.1 Hand Tools

a. Hand Spanner/Wrenches

There are different types of hand spanner and wrenches that are available in the workshop which could be selected depending on the type and condition of maintenance work to be done.

Example usage of hand spanner and wrenches:

i. Adjustable wrench is used as easy tool for undetermined size of bolt and nut when immediate tightening is required.

ii. Adjustable pipe wrench is suitable for fastening/loosening small sizes threaded pipes and damage head bolt in an awkward position.

iii. Slogging spanner is used for loosening and tightening big sizes of bolts using hammer.

iv. Instead of adjustable pipe wrench, hook spanner is used for threaded cap connection with teeth to avoid damaging the cap.

v. Offset spanners are used when working in an awkward position jobs.

vi. Square drive wrench is specially used for square bolts or handle.

vii. Torque wrenches are used for a specified torque controlled tightening of bolts and nuts.

The mechanical pilot hoist should be designed to operate as a moving ladder, or as a platform, to lift and lower one person on the side of the ship. Case 1 deals with the failure of a pilot hoist and happened to a pilot disembarking from a high sided vessel on the UK coast shortly before midnight. A mechanical pilot hoist should be so located that it is within the parallel body length of the ship and, as far as is practicable, within the mid-ship half length of the ship The **starboard pilot hoist** was used to lower the pilot to the waterline and it operated faultlessly.

Protection and Indemnity Insurance; P & I Insurance

Protection and Indemnity Insurance is mutual insurance which covers shipowners’ liability to third parties for damage to their ship or cargo, as well as statutory liabilities such as pollution and wreck removal, but does not cover direct losses to the shipowner’s own ship or cargo.

Protection and Indemnity Insurance is obtained through a mutual association formed by shipowners to provide liability indemnification protection from various liabilities to which they are exposed in the course of their business, and which spreads the liability costs of each member by requiring contribution by all members in the event of a loss.

Mutual protection provided by an association of shipowners against liabilities not covered by insurance.

racking (nav arch) When a ship is rolling, the accelerations on the ship’s structure are liable to cause distortion in the transverse direction. The deck tends to move laterally relative to the bottom structure, and the shell on one side to move vertically relative to the other side. This type of deformation is referred to as 'Racking'. (https://cultofsea.com › Ship Construction); Deformation of the section of a ship, generally applied to a transverse section, so that one set of diagonals in the plane of action is shortened while those at right angles thereto are lengthened. (https://www.history.navy.mil/)

racking force (cargo handling) a result of the static and dynamic forces within the container parallel to the ship’s deck, causing damage to the container sides from izvijanja kontejnera u smjeru paralelnom s palubom broda: Exceeding racking forces can be reduced by use of diagonal lashing units. In the pitching condition the racking force is acting in the container side frames.

racon /ˈreɪkɔn/ (RAdar beaCON) (navig) a radar beacon which produces a coded response or radar paint, when triggered by a radar signal; A racon is a radar transponder commonly used to mark maritime navigational hazards and other navigation features. radarski far odgovarač, radarski far tip racon, rakon, radarski svjetionik: The signal transmitted by the RACON appears intermittently on the display as a Morse character, a dashed or dotted line radiating out from the beacon. In the U.S., RACONs are used to mark lighthouses and buoys, inconspicuous coastlines, navigable spans under bridges, offshore structures such as oil platforms, or environmentally sensitive areas such as coral reefs. Raccons are particularly useful for showing up objects which otherwise may be difficult to identify. interrogation subsystem uređaj za odašiljanje signala, transponder subsystem uređaj za odziv, sensitivity time control automatska kontrola pojačanja prijavnika, automatic overload control sustav za automatsku kontrolu preopterećenja, slow sweep ~ racon sa sporim pretraživanjem, fast sweep ~ racon s brzim pretraživanjem, frequency agile ~ racon s podesivom frekvencijom off-set racon s pomakom vremena, integrated time off-set ~ upravljivi racon s pomakom vremena

radar navigation (n) (navig) Radar navigation uses radar to determine the distance from or bearing of objects whose position is known. This process is separate from radar’s use as a collision avoidance system. [Bowditch 2001] radarska navigacija: Radar navigation is similar to traditional navigation in that you have to identify landmarks, measure their position relative to your own and use those measurements to establish a position on the chart. Radar fixing is often quicker than taking bearings with a magnetic compass and is a more professional technique than simply transferring a latitude and longitude from the GPS.

The vessel was refloated on the next rising tide using her own power. The passenger cruise ship Saint Laurent has been safely refloated and removed from the Eisenhower Lock chamber in the Saint Lawrence Seaway following Thursday’s allision with a bumper. The container ship was refloated in the early morning on Sunday and moved to deeper waters so as to be inspected for damages. A tug was promptly called and with the rising tide the vessel was quickly re-floated and properly berthed. About 5 minutes later, a third tug arrived. At 0103, with one tug pulling aft, the vessel’s engine driving astern and two tugs and the bow thrusters pushing to starboard, the vessel refloated on the rising tide. The vessel was refloated 4 days later with tug assistance. The vessel remained aground with two tugs on scene attempting to refloat it.

ro-ro cargo ferry (n) (nav arch) ro-ro teretni brod: A ro-ro cargo ferry was on river passage with a pilot embarked.
ro-ro deck (n) (nav arch) paluba za ro-ro vozila: Within the ship is an enclosed, ventilated and weather-tight Ro/Ro deck that can protectively carry up to 400 cars and larger vehicles www.gCaptain.com
ro-ro freight (n) (cargo) ro-ro teret, teret za prijevoz ro-ro brodovima ~ vessel ro-ro brod, brod za prijevoz vozila
ro-ro passenger ferry (n) (nav arch) teretno-putnički trajekt: The largest ro-ro passenger ferry is MS Color Magic. It weighs 75,100 GT (Gross Ton). It entered the service in September 2007 for Color Line. It was built in Finland by Aker Finnyards. The ferry is 223.70 m long, 35 m wide and can carry 550 cars as well as 1270 lane meters of cargo. http://www.marineinsight.com/types-of-ships/what-are-ro-ro-ships/
ro-ro ship /ˈrɔʊ ˈreɪ/ = roll-on/roll-off vessel ro-ro brod, brod za prijevoz cestovnih vozila: The vehicles in the ro-ro ship are loaded and unloaded by means of built-in ramps. For the shipper, the advantage of using a ro-ro ship is speed. Since cars and lorries can drive straight on to the ship at one port and then drive off at the other port within a few minutes of the ship docking, it saves a lot of time of the shipper. The ro-ro ship is different from lo-lo (lift on-lift off) ship that uses a crane to load the cargo. The new ro-ro vessels will have a length of 238 meters, a beam of 34 meters and a gross tonnage of 64,000 metric tons. Each will be able to transport more than 7,800 lane meters of
ro-ro terminal, equivalent to approximately 500 trailers.

ro-ro terminal (n) (ports) ro-ro terminal, terminal za vozila: Scheduled to start full operation by the third quarter of 2016, the new ro-ro terminal will become NYK’s first automotive logistics base in the Middle East.

rose (n) (nav arch, sailing/boating/yachting) Perforated metal plates, fitted over the outside of injection sea cocks to prevent entrance of foreign substances to the ship’s pumps and piping system.

said to contain … (prep phr) (mar law, logist) “1×20′ container Said To Contain 750 x 25 kg bags of Sugar”. Suppose the container reaches destination and the receiver opens the container to find there are only 700 bags instead of 750 bags as per example below, natural instinct would be to hold the shipping line responsible just because they carried the cargo. The cargo, the quantity and the weight inside the container are not known or verified by the shipping line (although the SOLAS VGM may be proof of the weight) because they are not involved in the packing of the container. Therefore the shipping line needs some protection against potential claims relating to shortage etc, so they clause the bill of lading with Said To Contain.

(https://shippingandfreightresource.com/said-to-contain-clause-should-it-be-allowed-or-not/) This is a caveat clause applied to container-shipment transport documents, indicating that the carrier has no firsthand knowledge of what was loaded in the container.

sail drive (=S-drive) (n) (nav arch) a transmission system for a boat whose inboard engine has a horizontal output shaft. Basically a sail drive set-up is much like an outboard engine’s mid and lower section projecting through the boat’s hull. It’s a bit different in the sense that unlike an outboard engine or inboard/outboard (IO) set-up, the engine exhaust is not exiting the boat via the drive leg, but rather through the hull just like with a conventional drive system.

(http://www.boats.com/reviews/all-about-saildrives/#.WIEXna6nGM8) S-pogon (jedrilice):
With the saildrive, the weight of a shaft, stuffing box, and propeller are moved forward, almost under the engine. Further, the propeller’s angle of attack is more parallel to the surface of the water, which will enhance efficiency and help to minimize traditional prop-walk characteristics common to conventional drive configurations.

The sea as a route for travel; an ocean traffic lane; a waterway giving access to an inland port, navigable by ocean-going ships.
A seaway bill is a receipt of goods issued by the ocean carrier to the customer (also called the consignor or shipper). It is a contract by which the ocean carrier undertakes to transport the customer's cargo in its vessel or vessels, from one point to the other. (https://www.marineinsight.com/maritime-law/what-is-seaway-bill-in-shipping); a type of bill of lading used for port-to-port or combined transport carriage (http://www.maerskline.com/en-jm/help/shipping-glossary); Sea Waybills are not documents of title, so that the holder does not necessarily have ownership of the goods. Sea Waybills are increasingly used instead of Bills of Lading; they are simpler, which helps, e.g., when only short sea crossings are involved, or for regular shipments to established customers whose creditworthiness is not in doubt. Seaway bill takes the same form as B/L but is a non-negotiable receipt and not a document of title. Frequently used in the container trade. pomorski teretni list: A waybill is identical to a negotiable bill of lading except that it is not a document of title. There are no originals issued for this type of document. When a shipping document is issued to a “named” consignee and it is not a document of title, it may be considered as a “Sea Waybill.” Sea Waybill of Lading is a NON-NEGOTIABLE & NON-TRANSFERABLE DOCUMENT. https://shippingandfreightresource.com/cargox-blockchain-smart-bl-app/ When a shipping document is issued to a “named” consignee and it is not a document of title, it may be considered as a “Sea Waybill.” https://shippingandfreightresource.com/cargox-blockchain-smart-bl-app/ The seaway bill is usually preferred by companies that deal directly with each other on a regular basis. A seaway bill will show a consignor and a single consignee who can receive the goods at the port of discharge. https://www.marineinsight.com/maritime-law/what-is-seaway-bill-in-shipping A seaway bill is usually issued in triplicate – the original and second copies are given to the shipper or consignor, and the third to the consignee https://www.marineinsight.com/

**single deck vessel** (= singledecker) *(nav arch)* a vessel with one continuous deck

**brod s jednom palubom**: Many single deck vessels have very large hatches, and some are known as ‘self-trimmers’ because of provisions for the cargo to flow into all corners of the hold.

http://www.yourarticlelibrary.com/international-trade/maritime-transportation-and-international-trade/77

132 The most suitable cargoes for single deck vessels are heavy bulk cargoes, such as coal, grain, and iron ore. However, these vessels also carry light cargoes, such as timber, which can be stored on deck as well as below. Single decked vessels are not suitable for general cargoes, since there are few means of separating cargo tiers and lots.

A smart port is an automated port that uses nascent technologies such as big data, Internet of Things (IoT), blockchain solutions and other smart technology. The smart port of tomorrow that wants to engage trade with China is going to need an integrated and seamless technology base that will allow movement of product and containers from vessel to port to land based transport. The aim of this model is to reduce the total cost of the supply chain through optimal asset utilisation, lower inventory costs through efficient cargo management and visibility of the entire value chain from manufacture to end user.

China's first "smart" ship embedded with a domestically-developed intelligent navigation system made its debut in Shanghai. The smart ship is installed with SOMS, a China-Developed marine system with autonomous learning ability and intelligent operation system. It can analyze real-time navigation and meteorological data, pick the best routes and alert the crew to hidden dangers in advance.

neposrednom, trenutnom najmu brodova, spot tržište: The tanker operator forecasts the tanker spot market to improve from the current levels, but to remain well below the levels seen at the start of the year.; 2 (financ) The spot is a market for financial instruments such as commodities and securities which are traded immediately or on the spot. In spot markets, spot trades are made with spot prices. (http://www.investopedia.com/terms/s/spotmarket.asp?); The spot market is also referred to as the “physical market” or the “cash market” because of the instant and immediate pace and movement of orders made as orders are made at current market prices. Market prices are unlike forward prices, which cover prices at a later date. tržište robama i vrijednosnicama po tekućim cijenama i uvjetima na licu mjesta, gotovinsko tržište: Unlike the futures market, orders made in the spot market are settled instantly. Spot markets can be organized markets or exchanges or over-the-counter (OTC) markets. In some cases, crude oil, for example, futures market goods are sold at spot prices. However, the physical delivery of the goods happens on a later date. The spot market is also referred to as the “physical market” or the “cash market” because of the instant and immediate pace and movement of orders made as orders are made at current market prices.

However, the physical delivery of the goods happens on a later date.

spot rates (n) (shipping econ, mar law) COMPARE contract rates A spot rate is a one-off rate obtained for transporting a shipment by sea freight or air freight. Typically valid for one shipment only and often restricted to a specific vessel, aircraft or date range, spot freight rates fluctuate up and down by the day dependent on the market conditions.

Contract rate (spot rate) covers total operating expenses such as port charges, bunkering, crew expenses, insurance, repairs, and canal tolls. The charterer will generally pay all cargo-related costs. (www.euronav.com) vozarinski stavovi za kratkoročni najam brodova, najamnina za kratkoročni najam broda, vozarine ugovorene na licu mjesta po tekućim cijenama i uvjetima, trenutni vozarinski stavovi, promptni vozarinski stavovi, spot vozarinski stavovi: To maximize profit (minimize costs), ship owners must adjust speed in response to bunker prices and spot rates. Spot rates to transport goods, which typically fade in the final weeks of the year, are still soaring despite the service disruptions. https://gcaptain.com/ On Friday, The Loadstar reported that container spot rates from Asia to the US had been plummeting, with the Shanghai Containerised Freight Index (SCFI) recording a 10% drop for the US west coast and 7% for east coast ports.. http://gCaptain.com There may be times when a shipping line is low on bookings on a specific vessel or during a specific period due to low demand. Their ships may not be sailing with the optimal volumes.. In such cases, they may decide to offer “spot rates” in order to entice customers to ship with them. (https://www.shippingandfreightresource.com/fak-rate-and-how-it-works/) Spot rates have more than tripled in the past month, with BP Plc last week paying $350,000 a day to charter an LNG tanker to pick up a cargo from the U.S. https://gcaptain.com/ Spot LNG tanker rates in the Atlantic basin rose to a record $322,500 a day on Friday, up $99,000 from Jan. 5 https://gcaptain.com/

**stability change (=change in stability) (n) (stabil, nav arch) promjena stabiliteta broda:** The metacentric height of the ship changes due to flooding. This can be explained by the general expression of metacentric height: \( GM = KB + BM - KG \). The explanation of reduction in stability can be done in two ways, which is exactly what we will study in this article, but at a later stage. For now, it should suffice to understand that when a ship is flooded, it results in a change of \( KB \) and \( BM \) values. The \( KB \) rises due to flooding, and it may rise further due to change in the ship’s trim. However, there is a significant reduction in \( BM \), which is a function of the area moment of the ship’s water plane. Why? We will look into that when we study the Lost Buoyancy Analysis. https://www.marineinsight.com/naval-architecture/ship-stability-damaged-stability-ships/

turbine / ˈtɜːbɪn; ˈtɜːbain/ (marine eng) turbina gas ~ plinska turbina, low-pressure ~ niskotlačna turbina, steam ~ parna turbina, ~ blade lopatica turbine, ~
During a short sea passage on a twin-engined ship, a motorman was cleaning around the turbo blower of one of the main engines. Turbochargers of Marine Engines are important part of the system as they utilise the waste heat of the exhaust in order to supply charge air for scavenging of the engine. The equipment consists of turbine and blower attached on the same shaft.

Cleaning of the Turbine side and blower side is carried out at regular interval of time to remove carbon, soot, and other exhaust deposits. If the blower side cleaning is not carried out properly, then the supply of air to engine will be reduced, resulting in lack of air and improper combustion with black smoke. The Blower side of turbocharger is cleaned by fresh water. The engine is run at its full load rpm to achieve best possible

**Some Turning Basics**

**Turning Circle** - A ship’s turning circle is the path followed by the ship’s pivot point when making a 360 degree turn.

**Advance** - Advance is the amount of distance run on the original course until the ship steadies on the new course. Advance is measured from the point where the rudder is first put over.

**Transfer** - Transfer is the amount of distance gained towards the new course (shown here for 90° heading change).

**Tactical Diameter** - Tactical diameter is the distance gained to the left or right of the original course after a turn of 180° is completed.

**Final Diameter** - Final diameter is the distance perpendicular to the original course measured from the 180° point through 360° (shown here for steady turning radius, R).

**Pivot Point** - A ship’s pivot point is a point on the centerline about which the ship turns when the rudder is put over.

**Drift Angle** - Drift angle is an angle at any point on the turning circle between the intersection of the tangent at that point and the ship’s keel line.

- (/vi:di:'a:/ (=Voyage Data Recorder) (n) (navig) VDRs, required for ships over 3,000 gross tons under international law, are the equivalent of 'black boxes' on aircraft, recording crucial data such as radar images, position, speed and bring audio, among other data. (gCaptain <info@gcaptain.com>); a complete system, including any items required to interface with the sources of input signals, their processing and encoding, the final recording medium, the playback equipment, the power supply and dedicated reserve power source. (IMO); VDR is a collection and storage device, recording on a continuous loop, and records the command and control inputs of the vessel.

The National Transportation Safety Board has completed its documentation of the wreck of the cargo ship …… and the associated debris field, but the vessel’s voyage data recorder (VDR) has not been located. Audio recordings are likely to have have deleted deliberately from the voyage data recorder (VDR) The VDR should continuously maintain sequential records or preselected data items relating to the status and output of the ship’s equipment, and command and control of the ship

Vessel Traffic Management System (=VTMS) (n) (navig, safety)  = VTMS a marine traffic monitoring system established by harbour or port authorities, similar to air traffic control for aircraft. Typical VTS systems use radar, closed-circuit television (CCTV), VHF radiotelephony and automatic identification system to keep track of vessel movements and provide navigational safety in a limited geographical area. Služba nadzora i upravljanja plovidbom u luci

Vessel Traffic Monitoring Information System (=VTMIS) (n) (navig) Služba za nadzor i upravljanje pomorskim prometom: The purpose of this Directive is to establish in the Community a vessel traffic monitoring and information system with a view to enhancing the safety and efficiency of maritime traffic, improving the response of authorities to incidents, accidents or potentially dangerous situations at sea, including search and rescue operations, and contributing to a better prevention and detection of
vessel traffic planning (navig, safety) planiranje plovidbe, planiranje prometa u plovidbenom području

Vessel Traffic Service (=VTS; vessel traffic services) (n) (navig, safety) Vessel traffic services deal with managing ship traffic on marine routes, suggesting best routes for a vessel and ensuring no two vessels run into each other on congested routes.

(https://www.marineinsight.com/marine-navigation/what-are-vessel-traffic-services/); Vessel traffic services are shore-side systems which range from the provision of simple information messages to ships, such as position of other traffic or meteorological hazard warnings, to extensive management of traffic within a port or waterway.

(http://www.imo.org/en/ourwork/safety/navigation/pages/vesseltrafficservices.aspx) služba nadzora pomorske plovidbe, služba nadzora plovidbe, kontrola i vođenje plovidbe (u kanalima, lukama itd.), služba VTS: About 30 seconds before the collision Vessel Traffic Services (VTS) intervened to warn both vessels that they were running into danger but no response was received. The most commonly used sensing components of vessel traffic services are: 1. Radar system; 2. AIS; 3. Radio direction finder The purpose of a Vessel Traffic Service (VTS) is to provide active monitoring and navigational advice for vessels in particularly confined and busy waterways. There are two main types of VTS, surveilled and non-surveilled. Surveilled systems consist of one or more land-based sensors (i.e. radar, AIS and closed circuit television sites), which output their signals to a central location where operators monitor and manage vessel traffic movement. Non-surveilled systems consist of one or more reporting points at which ships are required to report their identity, course, speed, and other data to the monitoring authority. https://www.navcen.uscg.gov/?pageName=vtMain
Vessel Traffic Service Area (n) (navig, safety) Područje službe nadzora pomorske plovidbe: Generally, ships entering a VTS area report to the authorities, usually by radio, and may be tracked by the VTS control centre. 

Vessel Traffic Services and Reporting Systems (n) (safety) Organizations that manage vessel traffic services and/or vessel traffic reporting systems are capable of providing, to varying degrees, information about participating vessels (location, construction, cargo, etc.) that may be of use in resolving a SAR incident. Victory ship COMPARE Liberty ship an emergency fast cargo vessels to replace the slower Liberty ships in World War II teretni brod tipa Victory (za prijevoz u konvojima u II. svjetskom ratu): On April 28, 1943, the new ships were given the name Victory and designated the VC2 type (V for Victory type, C for cargo, and 2 for a medium sized ship between 400 and 450 feet long at the waterline). The Victories could carry 10,850 deadweight tons (the weight of cargo a ship can carry) or 4,555 net tons (the amount of space available for cargo and passengers), a larger load than the Liberties could manage. Victory ships typically carried a crew of 62 civilian merchant sailors and 28 naval personnel to operate defensive guns and communications equipment. The Victory ships were different from the Liberty ships primarily in propulsion, the steam engine of the Liberty giving way to the more modern, faster steam turbine. The Victory ships had engines producing between 5,500 to 8,500 horsepower. Their cruising speed was 15-17 knots (approximately 18.5 miles per hour).

Worldscale (WS) (n) (shipping econ, mar law) = An international index of freight for tankers. Worldscale is a schedule of freight rates for a standard ship in US dollars per tonne of oil for an array of oil routes. The rates listed in the table are designated as Worldscale Flat or WS100 and are revised annually. (http://www.clarksons.com/glossary/); Worldscale is a nominal worldwide tanker scale used to establish payment of freight services; Nominal freight scale applying to the carriage of oil and oil products in bulk by sea. An international freight index for tankers that provides a method of calculating the freight applicable to transporting oil by reference to a Standard Vessel on a round trip voyage from one or several load ports to one or several discharge ports. (www.worldscale.co.uk) međunarodni indeks tankerskih vozarina, međunarodna tablica tankerskih vozarina, Worldscale: The flat rate point 100 is effectively the breakeven point in accordance with the basis of calculation for the Worldscale Standard vessel but not for any other size. Worldscale includes expenses associated with ports, transit fees, port and voyage time and vessel bunker costs assessed in relation to the Worldscale Standard Vessel basis of calculation in order to produce a comparative nominal freight scale reported in dollars per tonne. Worldscale is used to calculate freight rates for oil tankers and product carriers. It is a tanker chartering tool, its principle is to provide the ship-owner with the same net return per day irrespective of voyage performed for the Worldscale Standard Vessel at WS100. ~ rates
vozarinski stavovi izračunani prema tablici Worldscale: Worldscale Rates are
based upon a 75,000 tonne total capacity vessel performing a round voyage and expressed in dollars per tonne of cargo. Any new Worldscale rate request will require mileage calculations, any voyage costs and port cost information. Rate calculations may involve several different route options to determine the cheapest. The final rate agreed will be determined as a percentage of the 'Worldscale' rate, based upon a guaranteed minimum quantity of cargo. This allows for charter parties to cover a wide range of possible voyage options without the need to calculate and negotiate each one separately. www.euronav.com
