**Navigational Satellite System** a constellation of satellites providing signals from space that transmit positioning and timing data to GNSS receivers. The receivers then use this data to determine location. (https://www.gsa.europa.eu/european-gnss/what-gnss); The network, consisting of currently 31 active satellites (75 satellites have been placed so far), operates on 1575.42 MHz (in the civilian range) and provides an accuracy of a few meters. Each satellite continuously transmits its data and position determination is possible via a sound time calculation of at least 3 satellites. GNSS receiver  (n) (navig) GNSS Receivers are the core product for satellite positioning. They convert signals from visible satellites into a position on earth. The amount of visible satellites is dependent on the number of constellations the receiver is compatible with, such as GPS, Glonass, Galileo and Beidou. (https://geo-matching.com/gnss-receivers); GNSS receivers determine the user position, velocity, and precise time (PVT) by processing the signals broadcasted by satellites. Because the satellites are always in motion, the receiver has to continuously acquire and track the signals from the satellites in view, in order to compute an uninterrupted solution, as desired in most applications. Any navigation solution provided by a GNSS receiver is based on the computation of its distance to a set of satellites, by means of extracting the propagation time of the incoming signals travelling through space at the speed of light, according to the satellite and receiver local clocks. This time difference is transformed into a fake range, the "pseudorange", by multiplying it by the speed of the light in the vacuum, \( R = c \times dt \). The pseudorange might be seen as a very rough estimate of the true range between satellite and user, and
has to be corrected to account for a number of phenomena before it can be interpreted as a precise measurement of the true distance.

GNSS prijamnik, GNSS prijemnik: GNSS receivers have prior knowledge of each satellite's PRN code (e.g. through the relevant SIS ICD), and correlate the incoming signals with local code replicas, to determine if a given satellite is visible or not.

green fuel (=synthetic fuel; electrofuel; e-fuel; biofuels; green hydrocarbons) (n) (marine eng) fuel produced from biomass sources through a variety of biological and thermochemical processes. (https://www.sciencedirect.com/science); Green fuels, also termed synthetic or electrofuels (e-fuels), are liquid, or gaseous fuels produced with electricity from renewables. Examples for such e-fuels are synthetic natural gas (SNG), green methanol or ammonia. They are carbon-neutral when burned, emitting only the amount of CO2 absorbed during its production.

In April 2018, more than 100 Member States met at the United Nations IMO in London and adopted an initial strategy on the reduction of greenhouse gas emissions from ships by at least 50% by 2050 compared to 2008 levels. <info=shippingandfreightresource.com International Maritime Organization (“IMO”) takes steps to actualize objectives specified in its 2018 statement of strategy to reduce greenhouse gas emissions from ships https://www.marinesight.com/ [2023-05-14 19:45:30] [2018-12-14 17:21:46]

It is impossible to position a liferaft to guarantee that it will float free when a vessel is lost, so do not hesitate to release it manually if you have time. Uninterrupted power supply in confined waters is essential in order to guarantee a ship’s manoeuvrability and should be considered a best practice.

Although the fan was a small piece of equipment, the missing front guard should have been replaced. It is suggested that the requirement for a propeller guard will depend on the exact role and particular operational conditions that a safety boat is likely to encounter.

The bosun climbed up onto the starboard platform using the deck guardrails and then waited for the deckhand to appear on the opposite platform. During operations, an O/S climbed onto the 2.2 metre hatch coaming and used the guard rail for foot support.

The guard ship in the area was able to identify the supply vessel and put me in contact with him on VHF ... Our practice is to station one Guard Ship ahead and the other one at the end of the cables and share radar and visual watch on all sectors of the surrounding area, ...

The guard zone defines an area which, when targets enter or leave as per user settings, an audible alarm is triggered to alert the user to the change. Zona alarma (na radaru): Most modern radars have a facility to incorporate a guard zone on the display which sounds an alarm whenever a contact enters a predetermined section of the display. The guard zone is set up using the EBL and VRM. Guard zones can be set up for many reasons, but a common one would be to give early warning of the approach of another vessel. I observed an echo on my radar screen that was passing...

COMPARE anchor windlass a small auxiliary drum usually fitted on one or both ends of a winch or windlass on which the turns of a line or wire are taken for heaving.

bubanj za uže (na sidrenom vitlu): An offshore supply vessel was mobilising for a project which required the use of an 84mm chain wheel (gypsy) instead of the 105mm unit already installed. The anchor party, comprising the third officer, bosun and one AB, could not fully house the anchor in the hawsepipe, as a twist in the cable between the gypsy and the guide roller prevented the anchor from orientating properly. The plan was to temporarily take the weight of the anchor on its lashing (wire sling) by 'walking back' the windlass in gear, and then rotate the slack chain between gypsy wheel and the guide roller to remove the twist.

The Coast Guard dispatched a helicopter crew to the ship in distress. The vessel made contact with Maritime Rescue Coordination Centre and a helicopter was dispatched to the vessel.

Helicopter operations are commonly used on ships for crew changes, pilot embarkations and disembarkations, medical and other emergency lift offs.

This enabled a prompt distress call to be made to the coastguard, which quickly initiated a helicopter rescue.

A purpose-built shipboard heliport is one designed specifically for helicopter operations.

**high cube container** (=HC container; high cube;) (n) *(cargo)* High-cube containers are similar in structure to standard containers, but taller. In contrast to standard containers, which have a maximum height of 2591 mm (8'6), high-cube containers are 2896 mm, or 9'6, tall. High-cube containers are for the most part 40' long, but are sometimes made as 45' containers. The superstructure of High Cube (HC) containers is approximately 30 cm higher than that of standard 40Ft GP containers, making it possible to load higher elements and/or more goods. The seaborne freight is often equal to that of a standard 40Ft GP container. https://www.logisticsglossary.com/term/hc/

Typically, we observe annually a speed reduction of 2-4%, which is quite significant. It is desirable to have an automatic alarm system in place that will tell us when is time for hull cleaning.

The vessel sustained significant hull damage. Only when tank soundings the following day revealed loss of fuel oil from no.2 starboard fuel oil tank, collision with TG1 and hull damage was confirmed. The icebreaker … suffered hull damage in Alaska. However, the container vessel suffered extensive hull damage. The ferry suffered substantial hull damage, but was able to return alongside without assistance.

The hull deflection, i.e. loss of hull’s integrity, may be caused by corrosion of vessel’s hull, or by fracture due to overload or as a result of an accident such as collision, contact or grounding.

The hull form is portrayed graphically by the lines plan or sheer plan.
Seacocks (quarter turn valves or guillotine valves), watertight valves and their control systems shall be permanently installed on all through hull openings below the waterline when the boat is at rest, with zero heel and in lightweight configuration, except in the case of integral deck scuppers, log, sounder and other similar equipment. hydraulic jack (n) 1 (marine eng) hidraulički pritezni uređaj (za vijke): Again the hydraulic jack was pumped to approximately 250 bar pressure, the pin was struck again and the deflected maul landed heavily on the leading seaman’s right hand. There are four bolts at each connection point which help for assembly and removal of the connecting rod, and are tightened to their required torque using hydraulic jack. Extracting the sheave pin appears to be in order, the risk assessment must consider the possibility of two more hazards when applying tension with the hydraulic jack; 1) the rod coming off the pin due to corroded / wasted threads, and, 2) the threaded rod fracturing, especially if not of approved strength. Therefore, most of the important or big screws are tightened hydraulically on ships such as cylinder head nuts, exhaust valve nuts, for crank pin bearing, cross head bearing, main bearing, tie bolts, etc. (http://marineengineeringonline.com/an-introduction-to-hydraulic-jacks-on-ships/)

ignite /ɪɡˈnæt/ (v) (marine eng, safety) zapali( se), upaliti se (motor): The compressed air from the bottle is necessary to ignite the fuel. The starboard cargo engine (its lever left in the ON position) must have developed high pressure in the cylinder causing the safety valve to crack open and ignite the flammable gases in the engine room. If the impact had been more direct, the steel plate could have pierced the tank, and also provided the energy to ignite the flammable mixture of fuel vapour and air which would have formed within the truck’s empty tanks. The cargo was liable to self-heat and ignite spontaneously because it contained fine shavings contaminated with cutting oil, cast iron borings and organic flammable materials. Unfortunately, the junior engineer succeeded in his attempt to ignite the boiler and the residual fuel ignited explosively. [2018-01-21 19:54:17] [2009-11-17 19:00:45]

**impeller** /ˈimpələ/ (n) 1 (marine eng) rotor: The components surrounding the turbine impeller are designed to be able to absorb the kinetic energy of several broken blades. ... the problems of higher impeller peripheral speed, elevated impeller blade temperature and increased impeller blade surface load, and the problem of optimizing the aerodynamic characteristics of the higher speed air flow in the impeller. The compressor impeller is of aluminium alloy or the more expensive titanium. The air exits the impeller radially and passes through a diffuser, where some of the kinetic energy gets converted to pressure energy. A labyrinth arrangement is also fitted to the back of the compressor impeller to restrict the leakage of air to the gas side.

2 (sailing/boating/yachting, marine eng) rotor pumpe, impeler: The pumping element is made up of a top cover, a pump shaft, an impeller, a bearing bush and a sealing arrangement around the shaft. The hollow bowl spindle features an impeller which pumps closing water from a built-in tank to the operating system for sludge discharge.

in accordance with (prep phr) u skladu s: Maintenance systems should be designed and followed to ensure that watertight doors are maintained in accordance with manufacturers’ instructions, and in accordance with good standard marine engineering practice. Ten minutes before transit, own ship altered course to 090 in accordance with the passage plan, in order to pass between beacons. Earlier, at about 23:30 hours, I had encountered a head-on vessel and, in accordance with Colregs, I altered our original course from 259 degrees to a new course of 285 degrees in order to pass the other at a safe distance. Reduction in speed from full speed to the recognised manoeuvring speed is to be as gradual as possible and in accordance with the manufacturer’s instructions. Two tugs were assisting, one was made fast on the port quarter and the other was standing by forward to assist in accordance with pilot’s orders. Hence, he lacked an understanding that his was a stand-on vessel in a crossing situation and was therefore expected to maintain course and speed in accordance with Rule 17(a) (i) of the COLREGS. The clearance must be set in accordance with the temperature of the engine. Check that all non-cargo lifting appliances on board have been identified and recorded in accordance with national regulations. inadequate (adj) neodgovarajući, neprikladan: ... a hazardous condition was found but the repair was grossly inadequate and did not eliminate the unsafe condition. Inadequate assessment of needs and risks; He came to the engine room and observed that all the sea water pumps were showing inadequate discharge pressure. The securing of these drums was evidently inadequate for the intended purpose: either the lashings used or their securing points were not capable of restraining the oil drums or were poorly adjusted/secured. An accident can be defined as an unexpected hazardous occurrence caused by unsafe practices that arise from inadequate knowledge, improper training, and failure to follow proper procedures, and usually resulting in loss of life or injury to personnel, damage to properties etc. The events leading to the capsizing were a mix of complacency, poor shipboard procedures and inadequate leadership, both afloat and ashore. The root cause of the accident was the failure of the pilot ladder due to inadequate maintenance and inspection. The fact that the boats involved in the collision were not carrying radios to communicate their predicament demonstrated the inadequate planning for the passage. Inadequate risk assessment and work planning, position of high sea suction and changes to draughts not adequately considered. Inadequate securing of items, cargo nets not used in conjunction with pallets. Improper motivation arising from complacency, inadequate supervision, operating without authority and defective equipment also contributed to the error chain. Although a gangway watch has traditionally been kept at the inboard side of the gangway, this is not always the best position. Inboard engine (marine eng) brodski motor: The boat did not have an inboard engine fitted but, as required by class rules, did have a small outboard which was stored inside the hull near the mast. That yacht then started the inboard engine and, leaving his sails to flog, made towards the man in the water. [2018-01-21 19:54:18] [2013-09-15 16:57:57]

inboard (adv) 1 unutra, u brod, na brod, u unutrašnjost broda: He then started to bring his catch inboard and stow the gear. However, they could easily have been removed after the gangway was hoisted inboard and before it was finally secured. Together they dragged the skipper inboard and began attempts to resuscitate him. The crew of a twin beam scallop dredger had hauled the beams inboard and had secured them in position with the safety chains ready to empty the catch of scallops.

The increase of air density results from adiabatic compression in the turboblower, the increase in air density is, however, fractionally offset by the increase of air temperature resulting from adiabatic compression in the turboblower, the increase in air density.

Because of an increase in pressure, the relief valve opened. The pressure increase in the drainage pot was sufficient to fracture the observation glass, leading to its catastrophic failure.

I altered course slightly to port to increase CPA to about 0.0515. Our vessel was drifting to port so I ordered to increase the speed to slow ahead and increase helm to 20 degrees to starboard. The pilot then asked the Master to increase the pitch to 20% and requested the helmsman to steer on a heading of 353° gyro (G) to bring the vessel to the south of the channel centreline. Within limits, so far as combustion is concerned, it is possible sometimes to increase the speed of an engine if the mean pressure is reduced. The Master asked the engine room to increase speed.

The oil level in the drainage pot increased to 20% and veer during the day to become onshore, leading to deteriorating local sea conditions.

indicator cock (n) (marine eng) An engine indicator is used to calculate the indicated power of the engine, and this is connected to the indicator cock. The engine indicator is operated as the engine fires when running normally. The cock is then shut for normal running. Cylinder heads for 4 stroke engines are of a complex design. They have to house the inlet and exhaust valves, the fuel injector, the air start valve, relief valve and indicator cock. The passages for the inlet air and exhaust gas are incorporated, as are the cooling water passages and spaces. The fire was the result of a defective high pressure fuel pump spraying fuel over a hot indicator cock on a cylinder head.
The indicator diagram is very important to know the combustion in the cylinder and also to adjust the engine. Indicator diagrams give efficiency of combustion in the cylinder, condition of the running gear, irregularities in fuel pumping and injection and a lot of things. The main engine indicator cocks were left open, the turning gear disengaged, the air receiver valves and main air start valve were shut, and the lubricating and cooling water pumps were left running. The indicator cock is opened when the engine is being turned over by the turning gear and, when being started for the first time after being shutdown to blow out any water or debris from the cylinder. The cock is then shut for normal running. Watch-keeping duties include checking the cock is not leaking exhaust gas, if it is a temporary cap can be screwed on, and the cock replaced at the first opportunity at next shutdown.

The shareholders' liability is limited to the shares they have purchased, and any losses or liabilities of the company do not affect their personal assets.

Joint venture

A joint venture is an agreement by two companies, typically one foreign and one domestic, to work together for mutual benefit with specific ownership percentages specified in a long-term contract. These two companies set up a third company (the Joint Venture).

Example: The new RORO Terminal is a joint venture initiative between the Japan-headquartered shipping company and Saudi Arabia-based Ports Development Company. A large private ship owner purchased its 49.5% stake in the joint venture last June for approximately $150 million. These alliances may take the form of pools, joint ventures, or space charter agreement. General Average is a partial loss voluntarily and reasonably incurred in time of peril for the safety of the joint adventure; which is contributed to by the owners of all property saved.

Jones Act

The Jones Act is section 7 of the Merchant Marine Act of 1920 that prohibits any non-US built or non-US flagged vessel from participating in trade between points of the United States.

Example: U.S. maritime industry stakeholders rallied together in a strong show of support for the Jones Act, sending a clear message to opponents that any attempt repeal the 95-year-old law is severely misguided and not in the best interest of the American people. The Jones Act requires goods moved between U.S. ports to be carried by ships built domestically and staffed by U.S. crews.

Journal

In marine engineering, a journal is the portion of a shaft or other revolving member which transmits weight directly to and is in immediate contact with the bearing in which it turns, allowing for a large bearing surface while allowing a reduced cylinder spacing ratio. The bearings are so constructed that the bearing pressure between journal and bearing is distributed evenly over the entire length of the bearing.

Example: The generous diameters of both crankpin and journal achieve a large bearing surface while allowing a reduced cylinder spacing ratio. The bearings are so constructed that the bearing pressure between journal and bearing is distributed evenly over the entire length of the bearing.

Joystick control

In marine engineering and navigation, joystick control is a device for controlling the movement of a vessel. It allows for precise and intuitive control of the vessel's direction and speed, making it easier for the crew to navigate in tight spaces or during adverse weather conditions.

Example: Upvrajlačka ručica (za upravljanje putovanjem broda)
strojem, dizalicom itd.), džoistik: The vessel was in hand-steering, joystick control, and the pilot was unhappy with having to continually check the only rudder angle indicator which was sited above his head. The OOW then returned to the centreline console and began to adjust the vessel’s heading to port using the joystick control on the vessel’s track pilot system. keeping clear (n) (seamanship, navig, sailing/boating/yachting) sklanjanje s puta,
Encountering and keeping clear of fishing vessels is a routine occurrence for most bridge watchkeepers. The tanker crossed the TSS as originally planned, took early action to avoid collision in accordance with Rule 16 and exercised the precaution of keeping clear of the MPC buoy in accordance with Rule 2(a).

As this was alarming, the CV was told that she was an overtaking vessel and that she was required to keep out of the way. Rule 13 clearly states that the overtaking vessel shall keep out of the way of the vessel being overtaken. In a clear day with no other traffic or land in the way, one would expect, as we were the stand on vessel, that the other vessel would do her duty and keep out of the way.

*Consignment of cargo, which is insufficient to fill a shipping container. It is grouped with other consignment for the same destination in a container at a container freight station.*

LCL (less than container load) is a mode of shipping via ocean. If you don’t have enough cargo to fill up an entire container, consider shipping LCL. (https://www.flexport.com/glossary/less-than-container-load/)

-zbirni kontejner (kontejner s robom koja glasi na više različitih primatelja): Ocean rates for LCL are commonly higher on a per-unit basis than for a full container load. Thus, consolidation of several LCL loads from different places or shippers into a full container can save on costs. **Less than Container Load (LCL)** is a service offered by freight forwarding companies, allowing shippers to book only part of a container. The smallest standard marine container carries a volume of 33 cubic metres or a weight of 28 tons – so an LCL service should be considered for any shipment considerably smaller than this. With an LCL shipment, you pay for your load to be shipped in a container with one or more loads from other customers of the freight transport provider. LCL lets you ship in smaller volumes so that you can keep your inventory lean. Instead of purchasing large quantities from suppliers, you can use LCL to keep a steady flow of inventory in smaller quantities. That frees up cash flow for other purchases. When an FCL shipment arrives at port, it’s unloaded from the vessel and delivered to the buyer. It’s more complicated for LCL: someone has to consolidate different shipments, process multiple documents per container, and then sort goods for each customer (https://www.flexport.com/learn/ship-by-lcl-or-fcl/) in the case of LCL shipments, the shipping line operates the container and therefore, is responsible to off load the contents of the container at their CFS.

If you experience lee helm in light air, shift crew weight to leeward to heel the boat and build weather helm.

**Lee-Oh!** (interj) **(sailing/boating/yachting)** uzvik pri zapovjedi za letanje (bordadu): Most crew sensibly take the view that lee-oh means let go the genoa sheet, which upsets those skippers who shout lee-oh at the start of the tack, and like to use the lift from the genoa generated by the rotation of the bow through the wind. The order Lee-oh is given when the genoa starts to luff.
lee fish (n) (fishing) lica, lica bilizma
lee shore (n) (sailing/boating/yachting) the land to the leeward of the vessel (wind blows from the ship to the land)
leeway (adv, adj) 1 (navig) COMPARE drift the amount of drift motion to leeward of an object floating in the water caused by the component of the wind vector that is perpendicular to the object's forward motion; Leeway is the motion of the object induced by wind (10 m reference height) and waves relative to the ambient current (between 0.3 and 1.0 m depth).

Be alert to navigational dangers and, where possible, keep well clear of a lee shore. The master chose to remain at anchor when gale force winds onto a lee shore were forecast.

When the vessel begins drifting (diagonally) leeward, water resistance is generated on the leeside of the bow.

The sailing boat was hit by a particularly strong gust of wind which caused it to capsize to leeward. It was fortunate that the yacht grounded on a reef with safe water to leeward. The analysis conducted after the incident, using the ship’s manoeuvring and “rate of turn” data, revealed that the initial “wheel over” position was too far to leeward, given the prevailing wind strength and direction. When the wind is pushing the ship’s stern away to leeward, the stern tends to swing towards the leeward.

The vessel was at 4.30 am on the leeward side of Groix Island to embark the pilot.

A navigator or pilot on a vessel must adjust the ordered course to compensate for the leeway drift. We are making ..., degrees leeway.
This allowed the westerly wind, blowing across the channel from the left, to have a greater effect on leeway. Correcting the DR position for leeway, current effects, and steering error result in an estimated position (EP). (Bowditch) Leeway and current effects combine to produce the most pronounced natural dynamic effects on a transiting vessel.
journey in poor visibility, having had a tiring voyage up-Channel. When the boat rounded the first mark, the crew members’ spirits rose as they headed downwind on the return leg. The engine rooms had not been re-visited by the time the ferry neared her berth on the return leg of the crossing at 0700. Similarly, mark each track leg’s distance under the course line with a “D” followed by the distance in nautical miles. The computer determines each track leg’s distance and, given a speed of advance, calculates the times the vessel can expect to pass each waypoint. letter of indemnity /ˈɪnˌdɛmɪnti/ (n) (mar law) A written undertaking by a shipper (infra) to indemnify a carrier for any liability which the carrier may incur for having issued a clean bill of lading when, in fact, the goods received were not as stated on the bill of lading. Such a letter is usually a central document in a fraud, whereby the shipper and carrier knowingly misrepresent to third parties the actual order and condition of the goods at the time of shipment or the bad order of the packing, or whereby they issue duplicate bills of lading to replace lost or stolen originals. Letters of indemnity should not be condoned by courts and are generally held ineffective as against third parties.

In case of cargo being lost or delayed in transit, the shipping company will allow delivery of the goods to the person claiming to be the consignee, if he gives a letter of indemnity; this is normally countersigned by a bank, and relieves the shipping company of any liability should another person eventually come along with the actual bill of lading. When the owners instruct the master to accept a letter of indemnity (LOI), they will take steps to ensure that the wording of the LOI presented to the master is the same as that which they have proposed. Carriers who meet a shipper request to issue a clean bill of lading in spite of pre-shipment damage or to backdate a bill of lading to meet letter of credit terms sometimes require letters of indemnity. The master or owner, if they agree, may require a letter of indemnity from the shipper for the consequences of complying should it turn out that the named party is not entitled to take delivery of the goods. It should be noted that, as a rule, any such letter that seeks to indemnify against an act, which is intended to defraud an innocent third party, is unenforceable in a court of law. http://www.leewardcorp.com/es/ The master or owner, if they agree, may require a letter of indemnity from the shipper for the consequences of complying should it turn out that the named party is not entitled to take delivery of the goods. http://www.tkmglobal.net/chartering_L.HTM Flexport will require an LOI if the consignee is receiving cargo without the presentation of an endorsed original bill of lading; i.e. if the shipment is released with a telex release.

liability (SOL) odgovornost brodara, odgovornost brodovlasnika:
Shipowners are generally entitled to limit their liability in respect of claims arising from damage caused by their ships. The maximum liability of a shipowner is usually calculated based on the size of the ship involved in the incident and has no relationship to the amount of damage caused by the incident. There has been a trend in the more recent Conventions to establish systems of determining liability to pay compensation for damage, in addition to providing a limit on the shipowners liability. Liability of the owner of a seagoing ship in case of damage to cargo or persons due to collision or other accidents is not unlimited. A typical SOL example is geographical deviation or departure from the contractually agreed voyage; liability for loss of and/or damage to cargo arising out of such a deviation falls outside the scope of standard P&I., charterer's liability odgovornost naručitelja prijevoza,

LNG fuelled ships will, in most cases, be the most expensive alternative, and this is mainly because of the price of LNG. Since LNG is significantly more expensive than HFO fuelled vessels were already operating globally with another 76 LNG-fueled ships being built.

Recent years have also seen the commissioning of double-ended ropax ferries, a coastal LNG carrier and small roro cargo ships with propulsion by LNG-fueled Bergen gas engines from Rolls Royce. DNV GL recently found that 63 LNG-fueled vessels were already operating globally with another 76 LNG-fueled ships being built.

As LNG fuelled ships are generally always more expensive than HFO fuelled ships equipped with after-treatment units, it means that the operating costs for LNG must be lower in order to make the use of LNG profitable.

The ship's loading instrument, e.g. a loadicator, is a ship specific onboard equipment and the results of the calculations are only applicable to the ship for which it has been approved. The Chief Officer needs to check all the resultant values (like GM, VCG, LCG, SF, BM) from the loadicator and compare it with approved test condition. CAMEL Loading software for Windows is a comprehensive Stress and Stability package, designed for container ships, bulkers, car carriers, tankers etc. The loadicator is type approved by Det Norske Veritas (DNV) and other Classification Societies. The loadicator offers Damage Stability, Ballast Management and Autotrim options. http://forums.marineinsight.com/forum/main-forum/1995-loadicator The test procedure of the loadicator includes choosing a text condition from the approved test conditions, entering the exact same data in the loadicator and comparing the results with the approved test conditions.
A chemical tanker was at anchor where her tanks were to be prepared for loading a new cargo of 50% sodium hydroxide solution, also known as caustic soda. The master therefore informed all parties concerned and stopped the loading by closing the hatches. Berth No. 3 Northern Jetty was used by the ship for discharging and loading chemical products. The accident happened because deficiencies in the loading and securing of the deck containers were spotted but not rectified before the ship sailed. It is the duty of the Master to inform the pilot of any special conditions, difficulties, or peculiarities whatsoever pertaining to vessel which might impose hazards in connection with the handling, berthing, unberthing, loading or discharging of the vessel. The chief officer is responsible for the safe handling, loading, stowage and carriage, including the custody of the cargo throughout the voyage. Commence loading.

After loading commenced, moorings were regularly tended to by ships staff.

Prepare the vessel for loading / discharging. Cargo loading had stopped because the winds were gusting above the terminal’s safety limits.

A marine loading arm, also known as a mechanical loading arm, loading arm, or mla is a device consisting of articulated steel pipes that connect a tankship such as an oil tanker or chemical tanker to a cargo terminal.

The use of loading arms, or articulated pipe systems, to replace hoses is becoming increasing popular, especially on bottom loading or unloading operations.
an articulated arm loading/discharge systems, and groups of loading arms are often found on a shore refineries or on offshore loading facilities. The loading arm will be out of service for some time, resulting in financial consequences for the terminal; Mainly used in the oil and gas industry, loading arms and hoses are storage tank equipment commonly used to transfer fuel or liquid. Nowadays, a loading arm is recommended suitably for tanker loading and unloading, it is seen as the safe, fast and easy way of operation especially in the terminals. https://candnpetroleumequipment.wordpress.com/2015/10/01/loading-arms-versus-hoses/ All loading arms are chiksans with quick connector couplings. LOF 2000 (=Lloyd's Open Form) = Lloyd's Standard Form of Salvage Agreement

A form of salvage contract approved and published by the Council of Lloyd's to replace, as of September 1, 2000, the previous Lloyd's Standard Form Salvage Agreement (LOF 1995). The acronym LOF derives from the former name of the Agreement (Lloyd's Open Form). LOF 2000 provides for salvage services to be rendered on the principle of no cure - no pay (infra), subject, however, to the provisions of the Salvage Convention 1989 (infra) relating to special compensation (infra) and to the SCOPIC Clause

Lloyd's sov standardni obrazac ugovora o spašavanju: Improving the understanding of LOF is an area on which both the International Salvage Union and Lloyd's intend to campaign. Lloyd's Open Form (LOF) is still the most widely used salvage contract, even after over a century of constant use.

rudder, side thrusters, and steering gear
The changeover from sea to manoeuvring mode was carried out at the end of passage, rather than before, as required in the standing orders. The main engine control changeover from sea to manoeuvring mode was later than usual, and the engine control room phoned the bridge to inform them that there would be a delay in starting the bow thrusters. On manoeuvring mode, the vessel's engine was on harbour manoeuvring mode under bridge control.

With an astern manoeuvre, the master came free of the quay and went forward at manoeuvring speed, about four knots. The Pilot attempted to contact the target on both channels 13 and 16 without success but maintained full ahead manoeuvring speed. According to the wheelhouse poster, the minimum manoeuvring speed for vessel A was 5 knots.

Corrective/preventative actions: The fleet was instructed to make warning placards with the words 'Turning gear engaged' and to hang these at all manoeuvring stations and engine controls whenever the turning gear is engaged, irrespective of whether the safety devices are functional.

The inspectors attended the bridge simulator training centre and witnessed several simulated manoeuvring tests.

Man overboard

A warship from the age of sail; a British Royal Navy expression for a powerful warship or frigate from the 16th to the 19th century. (Wikip)
Italian: **uomo in mare**: The wearing of lifejackets or buoyancy aids will make the difference between life and death for many **man overboard casualties**; it is very strongly recommended that crew working on the deck of a fishing vessel routinely wear them. The drill was aborted as the master broadcast "**man overboard**". He ran to the bridge shouting "**Man overboard**" as he could not make himself heard against the noise of the wind and rain. Survival times of a **man overboard** can be counted in minutes and seconds, so no time should be wasted hauling gear which could be jettisoned and recovered later. *It was pointed out that the **man overboard signal** had not been sounded. The workboat’s other deckhand reported the **man overboard (MOB)** to the skipper, who immediately put the engines into neutral and called the local harbour authorities to report the incident. **Scharnow turn**

Maritime Safety Committee (MSC) oversees the implementation of international maritime safety agreements, with the aim of improving safety at sea and reducing the risk of accidents. Its work is guided by the International Maritime Organization (IMO), an intergovernmental organization responsible for the regulation of international shipping. The MSC is responsible for:

- Reviewing and implementing international safety conventions and regulations
- Developing international safety standards
- Coordinating the development of national and regional maritime safety policies
- Monitoring and ensuring the implementation of safety agreements
- Coordinating with other international organizations involved in maritime safety

The MSC is an important body in the international maritime industry, as it ensures that safety standards are maintained and that maritime safety agreements are implemented effectively. This is crucial for the protection of lives and property at sea and for maintaining a safe and efficient international shipping industry.

MGO (=Marine Gas Oil) (n) (marine eng) Marine Gas Oil or MGO, is a high quality marine fuel
that consists exclusively of distillates. Distillates are all those components of crude oil that evaporate during distillation and are then condensed from gas into liquid.

(Marine gas oil (MGO) refers to marine fuels that consist solely of distillates, the components of crude oil that evaporate in fractional distillation and are then condensed from the gas phase into liquid fractions. It’s similar to diesel but has a higher density and unlike heavy fuel oil (HFO), marine gas oil doesn’t need heating during storage.

brodsko plinsko ulje: MGO has inherently a transparent to light yellowish brownish color, but is colorized red. If a marine fuel like heating oil is used in inland waterway shipping, it is colorized with a yellow dye. These measures are to enable the detection of the type of use, and protect against the misuse of low-taxed and relatively cheap heating oil, which is often the same fuel used in inland shipping. https://maritimereview.ph/what-is-mgo/

Maintenance of machineries has to be carried out regularly. Considering the ship's situation, various tools, parts, and materials are required to be always available onboard. Clear and good understanding of tools, parts, and materials are beneficial to engineers for proper upkeep and inventory of tools.

8.1 Maintenance Tools

8.1.1 Hand Tools

a. Hand Spanner/Wrenches

There are different types of hand spanner and wrenches that are available in the workshop which could be selected depending on the type and condition of maintenance work to be done.

Example usage of hand spanner and wrenches:

i. Adjustable wrench is used as an easy tool for undetermined size of bolt and nut when immediate tightening is required.
ii. Adjustable pipe wrench is suitable for fastening/loosening small sizes threaded pipes and damage head bolt in an awkward position.
iii. Slogging spanner is used for loosening and tightening big sizes of bolts using hammer.
iv. Instead of adjustable pipe wrench, hook spanner is used for threaded cap connection with teeth to avoid damaging the cap.
v. Offset spanners are used when working in an awkward position jobs.
vi. Square drive wrench is specially used for square bolts or handle.
vii. Torque wrenches are used for a specified torque controlled tightening of bolts and nuts.

Per Calendar Day (Month/Year) Costs (n) (shipping econ) Vessel’s costs expressed as $ per day (month/year) for a calendar period during which the vessel was in service. The number of calendar days (months/years) are divided into the total costs incurred during the period.
It is generally acknowledged that ship owners should have the benefit of a percentage allowance, since the measurement of bulk liquids is not an exact science, and unavoidable loss will often occur during a voyage.

Detention, also known as per diem, is a fee charged for the extra days a container is away from port.

The specific charges will vary depending on the port and terminal, but they can be steep, especially when combined with per diem/detention fees — anywhere from $75-$200 per container, per day, is typical.

pivot point /ˈpivət/ (=pivoting point) (n) (ship handling, navig) točka oko koje se brod okreće tijekom zakretanja; pivot point sits at the tangent of the turning circle and the axis of the ship and thus reflects the turning speed. (H. Baudu, p. 248) točka okretišta broda: The closer the pivot point is to the centre of the ship, the smaller the turning radius becomes. H. Baudu (2014), p. 248
When turning while the ship makes headway the pivot point may be located approximately in the ship’s forward quarter. H. Baudu (2014), p. 254 In practice, if the ship is stopped, the pivot point merges with the centre of gravity at the middle of the ship. The position of the pivot point depends on a number of influences. With headway, the pivot point lies between 1/4 and 1/3 of the ship’s length from the bow, and with sternway, it lies a corresponding distance from the stern. pleasure boat (n) (nav arch) brodica za razonodu
pleasure craft /ˈpleə kra:f/ (=pleasure craft) (n) 1 (nav arch) in a marine context, are all boats used for recreational not commercial purposes. Though the word craft applies to all sizes of vessels, by convention pleasure craft are boats, and most commonly are small to moderate sized boats, under approximately 80 feet (24.3 meters) LOA. Though the term craft applies to all vessels operating in a fluid medium, the term pleasure craft is only used when applied to boats.

brodica za razonodu: A 6m, white-hulled, low freeboard pleasure craft was at anchor and engaged in sea angling. Soon after, the crew were able to re-embark, the tow was slipped and the pleasure craft made her own way downriver. Besides, some equipment is mandatory for pleasure vessels of 13.7m in length and over which are classified in the Merchant Shipping Regulations as Class XII vessels. https://Safety4sea.com

Most of the Port’s considerable trade in animal feedstuffs is discharged here where there is large-scale private sector investment in specialist warehousing. The outcome of a complete privatization of the port facility with a mandate that the facilities retain their maritime role. The port authority is entirely privatized with almost all the port functions under private control with the public sector retaining a standard regulatory oversight. Still, public entities can be shareholders and thus gear the port towards strategies that are deemed to be of public interest. Private service ports are maximizing the interests of their shareholders.

Protection and Indemnity Insurance; P & I Insurance

Protection and Indemnity Insurance; P & I Insurance

Protection and Indemnity Insurance is mutual insurance which covers shipowners' liability to third parties for damage to their ship or cargo, as well as statutory liabilities such as pollution and wreck removal, but does not cover direct losses to the shipowner's own ship or cargo. Insurance obtained through a mutual association formed by shipowners to provide liability indemnification protection from various liabilities to which they are exposed in the course of their business, and which spreads the liability costs of each member by requiring contribution by all members in the event of a loss. The helmsman then tried to gybe to head for the first racing mark, but could not as the boat was moving too slowly.

When a ship is rolling, the accelerations on the ship’s structure are liable to cause distortion in the transverse direction. The deck tends to move laterally relative to the bottom structure, and the shell on one side to move vertically relative to the other side. This type of deformation is referred to as 'Racking'. (https://cultofsea.com › Ship Construction); Deformation of the section of a ship, generally applied to a transverse section, so that one set of diagonals in the plane of action is shortened while those at right angles thereto are lengthened. (https://www.history.navy.mil/)
**racking force** *(cargo handling)* A result of the static and dynamic forces within the container parallel to the ship’s deck, causing damage to the container. Exceeding racking forces can be reduced by use of diagonal lashing units. In the pitching condition the racking force is acting in the container side frames.

**racon** /ˈreɪkən/ *(= RAdar beaCON)* *(n)* *(navig)* A radar beacon which produces a coded response or radar paint, when triggered by a radar signal. A racon is a radar transponder commonly used to mark maritime navigational hazards and other navigation features. Radarski far odgovarač, radarski far tip racon, rakon, radarski svjetionik:

The signal transmitted by the RACON appears intermittently on the display as a Morse character, a dashed or dotted line radiating out from the beacon. In the U.S., RACONs are used to mark lighthouses and buoys, inconspicuous coastlines, navigable spans under bridges, offshore structures such as oil platforms, or environmentally sensitive areas such as coral reefs. Racons are particularly useful for showing up objects which otherwise may be difficult to identify. Interrogation subsystem uređaj za odašiljanje signala, transponder subsystem uređaj za odziv, sensitivity time control automatska kontrola pojačanja prijamnika, automatic overload control sustav za automatsku kontrolu preopterećenja, slow sweep racon racon sa sporim pretraživanjem, fast sweep racon racon s brzim pretraživanjem, frequency agile racon racon s podesivom frekvencijom off-set racon s pomakom vremena, integrated time off-set racon upravljivi racon s pomakom vremena.

radar receiver (RX) (=Rx) (n) (navig) radarski prijamnik, radarsi prijamnik, prijamnik radara [2018-12-04 14:21:40] [2013-10-13 20:54:15]
radar receiver - technical specifications radarski prijamnik - tehničke osobine Intermediate frequency (IF) (MHz) međufrekvencija, Short pulse kratki impuls, Medium/Long pulse srednji/dugi impuls, Noise figure (dB) šum prijamnika (dB) [2015-02-20 10:23:04] [2014-04-17 19:31:59]

radar reflector (n) (navig) radar reflectors are fitted to vessels or navigational buoys or other charted features to improve their reflective properties so as to make them visible to searching radar.; A metal device designed for reflecting strong echoes of impinging radar signals towards their source. (http://www.seasources.net/Radar_Terms.htm) radarski reflektor: The most common type od radar reflector is the octahedral reflector (8 corner reflectors). passive radar reflector pasivni radarski reflektor, active radar reflector aktivni radarski reflektor: There are two types of active radar reflectors or radar transponders which are used to assist the navigator to identify charted objects: racons and remarks.

radar resolution (n) (navig, electr) radar’s ability to distinctly display two radar targets which are close to each other radarska razlučivost, rezolucija radara, radarska
The scanner transmits the radio pulses and receives their reflected echoes. Most scanners rotate at a constant speed of 24 rpm. Many modern scanners rotate at variable speeds dependent upon the range in use in order to optimize radar detection.

Beamwidth (to –3 dB) (degrees): horizontal / vertical

Sidelobe attenuation (dB) slabljenje bočnih latica, Gain (dB) osjetljivost, dobitak/jačina,

Rotation rate (rpm) broj okretaja (o/min), broj obrtaja (o/min)

By using four radar scanner's, the port's radar service extends from the East Lepe buoy, Western Solent to No Mans Land Fort in the Eastern Solent.

The simulator emulates a variety of the functionalities found in modern marine radar and provides control over traffic density, waterways, sea state and weather conditions.

The radar shadow is the area covered by the radar's beam, and it is used for navigation purposes.

The radar station is the location where the radar equipment is housed and operated.

The radar surveillance system is used for monitoring and tracking objects in the area covered by the radar's beam.

The radar sweep is used to move the radar beam across the horizon, allowing the system to detect objects at different ranges.

The radar system is the overall system that includes the radar scanner, radar station, and radar surveillance system.
radar target (n) (navig) radarski cilj: The OOW also noticed a number of radar targets following the south-west traffic lane of the TSS. [2016-01-06 13:13:53] [2013-10-13 20:58:26]

radar transmitter - technical specifications (n) (navig, electr) radarski predajnik, radarski odašiljač Peak power (kW) vršna snaga (kW), Frequency (MHz) frekvencija (MHz), Pulse length duljina impulsa, Pulse repetition rate (Hz) frekvencija ponavljanja impulsa (Hz) [2015-02-20 10:23:04] [2014-04-17 19:27:27]

righting lever; GZ

The vertical line of action of the buoyancy force (Bf) acting through the centre of buoyancy (B) when the ship is heeled (Rhodes, Ship’s Stability, Seamanship 2003)

Any changes in weight will inevitably impact on a vessel’s righting lever and her freeboard, both of which are crucial to safety. ... stability calculations, based on the reported asymmetrical distribution of ballast, show that the cargo loading conditions have a negative righting lever arm (GZ) from 0 degrees to 17.3 degrees but a satisfactory GZ above that angle. The righting levers (Z) for specified angles of heel are represented on a Curve of Statical Stability, commonly known as GZ Curve

righting moment; RM

The Righting Moment is the best measure of a ship’s overall stability. It describes the ship’s true tendency to resist inclination and return to equilibrium. The Righting Moment is equal to the ship’s Righting Arm multiplied by the ship’s displacement.

said to contain … (=STC) (prep phr) (mar law, logist) “1×20′ container Said To Contain 750 x 25 kg bags of Sugar”. Suppose the container reaches destination and the receiver opens the container to find there are only 700 bags instead of 750 bags as per example below, natural instinct would be to hold the shipping line responsible just because they carried the cargo.. The cargo, the quantity and the weight inside the container are not known or verified by the shipping line (although the SOLAS VGM may be proof of the weight) because they are not involved in the packing of the container.. Therefore the shipping line needs some protection against potential claims relating to shortage etc, so they clause the bill of lading with Said To Contain.. (https://shippingandfreightresource.com/said-to-contain-clause-should-it-be-allowed-or-not/); This is a caveat clause applied to container-shipment transport documents, indicating that the carrier has no firsthand knowledge of what was loaded in the container.

(opaska u teretnici): “1×20′ container Said To Contain 750 x 25 kg bags of Sugar” (https://shippingandfreightresource.com/said-to-contain-clause-should-it-be-allowed-or-not/) STC means the Shipping line is saying that based on the shippers declaration, the container is said to contain XYZ cargo and they haven’t verified the contents.. https://www.shippingandfreightresource.com/ [2021-02-01 12:59:21] [2018-08-02 12:43:54]

**sail drive (S-drive)** *(nav arch)* a transmission system for a boat whose inboard engine has a horizontal output shaft; Basically a sail drive set-up is much like an outboard engine’s mid and lower section projecting through the boat’s hull. It’s a bit different in the sense that unlike an outboard engine or inboard/outboard (IO) set-up, the engine exhaust is not exiting the boat via the drive leg, but rather through the hull just like with a conventional drive system.

(http://www.boats.com/reviews/all-about-saildrives/#.WIEXxnaGnGM) **S-pogon (jedrilice):**

With the saildrive, the weight of a shaft, stuffing box, and propeller are moved forward, almost under the engine. Further, the propeller’s angle of attack is more parallel to the surface of the water, which will enhance efficiency and help to minimize traditional prop-walk characteristics common to conventional drive configurations.

**All-Levels Sample** A sample obtained by lowering a weighted, stoppered bottle or beaker to a point 1 foot (0.3 meter) above the free water level and then, with a sharp jerk of the line opening the sampler and raising it at a rate that is about 75% full (a maximum of 85% full) as it emerges from the liquid.

**uzorkovanje na svim visinama tanka, uzorak uzet na svim visinama tanka**, **automatic sampling automatically uzorkovanje, Flow-Proportional sampling** A sample taken by an automatic sampler from a pipeline at a rate that is proportional to the liquid flow rate. **uzorak razmjerno proporcionalan s brzinom protoka tekućine, Time-Proportional sampling** A sample taken from a pipeline at regular intervals during a batch transfer period. **sampling uzorkovanje u redovitim intervalima, Bottom sampling uzorkovanje s dna tanka, middle sampling uzorkovanje iz**
**sredine tanka**, running **sampling** A sample obtained by submerging an unstoppered beaker or bottle from the surface of the liquid to a point as near as possible to the shore tank draw off point or about one foot above the level of the free water in a ship tank, and then raising it without letting it rest, at a rate so that it will be about 75% full as it emerges from the liquid. (www.euronav.com)

**rak uzet pri izlasku posude za uzorak iz tekućine / tekućeg tereta, top **sampling** A sample taken from a valve or connection on a tank or pipeline. uzorak uzet pri vrhu tanka (iz ventila ili cjevovoda), spot **sampling** A sample taken at a specific "spot" within a tank using a stoppered bottle or beaker and lowering it to the level of desired sample then opening it and allowing it to remain at that level until full. A thief or a zone sampler may also be used to obtain spot samples (www.euronav.com)

**uzorkovanje na pojedinim mjestima tanka, spot uzorkovanje, Upper, Middle, Lower **sampling** Spot samples taken from the upper third, the middle and lower thirds of the liquid in the tank. uzorci uzeti iz pojedinih razina po visini tanka, sampling device naprava (uređaj) za uzimanje uzoraka**

**SART (=Search and Rescue Transponder; sart)** (n) (navig, safety) A SART is a portable battery powered radar transponder which operates on “x-band or 3 cm radar”. A SART is a self contained, waterproof radar transponder intended for emergency use at sea. The radar-SART is used to locate a survival craft or distressed vessel by creating a series of dots on a rescuing ship’s radar display. https://officerofthewatch.com/tools/maritime-dictionary/; SAR transponders (SARTs) are used for locating survivors by SAR units and their signals are also to be considered as a distress alert. The SART should normally be taken to the survival craft when abandoning a vessel. (CAMSAR II – Mission Coordination) transponder za traganje i spašavanje: In the GMDSS (Global Maritime Distress and Safety System), certain classes of vessel must carry a SART. SARTs transmit in the X-band (3 cm) radio frequency used by common aeronautical and maritime radar. seabream (=seabream; sea-bream; sea bream) (n) 1 (fishing) = gilt-head bream English name for marine sparid fishes. The Sparidae family is also known as porgies. These fish have certain distinctive features that make them easily identifiable. First, their bodies are relatively flat. The line from the dorsal area to the front of the fish descends very rapidly giving the face a flattened appearance, especially when viewed in profile. Their color varies widely from species to species, mainly depending on water type and environment. In brackish waters, for example, the fish tend to be darker, with shades of blacks and grays to help them blend in with the environment. Some fish, in other areas, even have a bright red appearance, showing how diverse members of the family can be. (http://www.wisegeek.org/what-is-sea-bream.htm) ribe iz porodice Sparidae (orade

A cartel is a group of independent market participants who collude with each other in order to improve their profits and dominate the market. By the beginning of the twentieth century, liner shipping companies had established cartels on nearly all world trade routes. Some cartels coordinate sailing schedules or create exclusive territories (control over specific ports or ranges of ports), and there has been at least one case in which the firms even restricted investment in newer, larger and faster ships.

single-point mooring (=SPM) (n) (navig) the single point mooring buoy consists of a buoy that is permanently moored to the seabed by means of multiple mooring lines; An SPM is a loading buoy anchored offshore that serves as a mooring point as well as an interconnection for tankers loading or offloading liquid products. sidrenje (privez) na jednu točku (sidro ili plutaču): shuttle tankers have been specially designed to load at the bow from a single point mooring at sea. Single Point Mooring (SPM), also known as mono-mooring or bow mooring, means the tanker is moored at the bow, using one or two hawsers to a buoy or tower. This had little effect, and the ship drifted beam on to the wind, eventually striking the SPM buoy aft of amidships.

\(\text{voda u mirovanju, mirni vodostaj, period mirovanja morskih mijena, Italian: stanca:}\)  
The best time to berth or leave is at slack water. The vessel's arrival at its berth was planned to coincide with the \(\text{period of slack water}\). After casting off the berth \(\text{just after slack water}\), the vessel's stern-first exit was assisted by two large tugs. The plan therefore required a reduced speed to ensure they reached the straits at slack water. Slack water was at 0926 and so the passage was made with a \(2 - 4\) knot flood stream, which in some sections of the narrow channel was directly abeam. The terminal's brochure recommends unberthing at \(\text{slack water}\) or on rising tide.

A smart port is an automated port that uses nascent technologies such as big data, Internet of Things (IoT), blockchain solutions and other smart technology. The smart port of tomorrow that wants to engage trade with China is going to need an integrated and seamless technology base that will allow movement of product and containers from vessel to port to land based transport. The aim of this model is to reduce the total cost of the supply chain through optimal asset utilisation, lower inventory costs through efficient cargo management and visibility of the entire value chain from manufacture to end user. Smarter waterways, smart ports, remote piloting and the phasing-in of remotely operated and autonomous ships represent a technological breakthrough.

China's first "smart" ship embedded with a domestically-developed intelligent navigation system made its debut in Shanghai. The smart ship is installed with SOMS, a China-Developed marine system with autonomous learning ability and intelligent operation system. It can analyze real-time navigation and meteorological data, pick the best routes and alert the crew to hidden dangers in advance.

If a SAR case has the potential to become a major SAR operation, then the appointment of a specific SMC or a searchmaster (SM) is to be considered.
The ISM Code establishes safety-management objectives and requires a safety management system (SMS) to be established by the Company (see ISM Company) to assure responsible management of the ship. The ISM Code is the safety management system audit. A regular maintenance program consists of periodically checking mounting bolts and brackets, keeping wiring connections clean, tight and external wiring connections smeared with a thin coating of petroleum jelly. **stability** /ˈstæ bɪ lɪ tɪ/ (=ship stability) *(n)* 1 *(stabil)* the tendency which a vessel has to return to the upright position after the removal of an external force which inclined her away from that position

**stabilnost (broda):** Vessel’s stability is a measure of its ability to get back on an even keel after suffering a heel which is a "temporary" inclination of a ship, caused by outside forces such as winds, waves or when a ship turns. (https://www.marineinsight.com/) **dynamic stability** dinamička stabilnost, positive stability pozitivan stabilitet (jedrilica se može sama izravnati), negative stability negativna stabilitet, neutral stability neutralna stabilitet, static stability statička stabilnost, statički stabilitet, damaged stability stabilitet brod u oštećenom stanju (zbog prodora mora u brod): Stability calculations for intact or damaged stability focus on the center of gravity, center of buoyancy, and metacenter of vessels and on how these interact. **stability change (=change in stability) (n) (stabil, nav arch) promjena stabiliteta broda:** The metacentric height of the ship changes due to flooding. This can be explained by the general expression of metacentric height: \( GM = KB + BM \), KG. The explanation of reduction in stability can be done in two ways, which is exactly what we will study in this article, but at a later stage. For now, it should suffice to understand that when a ship is flooded, it results in a change of KG and BM values. The KB rises due to flooding, and it may rise further due to change in the ship’s trim. However, there is a significant reduction in BM, which is a function of the area moment of the ship’s water plane. Why? We will look into that when we study the Lost Buoyancy Analysis. https://www.marineinsight.com/naval-architecture/ship-stability-damaged-stability-ships/ [2018-12-18 14:23] [2018-11-14 14:08:38]

switch bill of lading (=SBL) (n) (logist, mar law) SEE original Bill of Lading

Corrections or changes to an original bill of lading calls for issuing another set with the correct details on it by way of a switch bill of lading. While some very minor alterations are endorsed on the original bill of lading itself, there may be other changes that require the issuance of a fresh set. These include changes to the port of discharge, the buyer or receiver, the description of goods to include its full details, or certain specifications, or the trading terms. Any of these pre-agreed points may have changed while the goods are in transit. When any of these cases occur a fresh bill of lading is issued and therefore called a switch bill of lading.

(https://shippingandfreightresource.com/what-is-a-switch-bill-of-lading-and-when-and-why-is-it-used/); Nova teretnica za istu pošiljku, ali izmijenjenoga sadržaja. Ima status originalne teretnice. Preduслов za izdavanje za izdavanje ovačeve (nove) teretnice je da se komplet /set prve teretnice ponisti uz prethodnu suglasnost glavnih sudionika u poslu. drugi komplet teretnice promijenjena sadržaja, drugi set teretnice promijenjena sadržaja: Switch bills of lading may be requested (a) When there has been a change in the original trading conditions; (b) Goods have been resold (probably high-seas sale) and the discharge port has now changed to another port, © The seller (who could be an intending agent) does not wish the name of the actual exporter to be known to the consignee in case the consignee strikes a deal with the exporter directly. https://shippingandfreightresource.com/what-is-a-switch-bill-of-lading-and-when-and-why-is-it-used/ A switch bill of lading can be issued anytime once the cargo has left its port of origin, but before it is handed over to the original receiver. https://shippingandfreightresource.com Once the switch bill of lading is issued, the first set ceases to be part of the shipping documents of the particular consignment. The most important thing here is that there can never be two different sets of bills of lading for the same cargo. https://shippingandfreightresource.com There may be perfectly legitimate reasons behind a request for switch bills of lading, for example that there has been a change in the consignee’s logistic plans so that the goods must be delivered at another port than first envisaged. https://www.skuld.com/topics/legal/pi-and-defence/switch-bills-of-lading [2023-05-14 19:57:48] [2019-04-30 12:18:40]

In several cases, a tool port is a transitional form between a public service port and a landlord port. (https://people.hofstra.edu/geotrans/eng/ch4en/conc4en/tbl_public_privte_roles_ports.html) Represents the most common management model where infrastructure, particularly terminals, are leased to private operating companies with the port authority retaining ownership of the land. The most common form of lease is a concession agreement where a private company is granted a long term lease in exchange of a rent that is commonly a function of the size of the facility as well as the investment required to build, renovate or expand the terminal. The private operator is also responsible to provide terminal equipment so that operating standards are maintained. **topgallant-bulwark planking**

Topgallant-bulwark planking is the construction of the rigging of a sailing ship that extends from the topgallant mast to the topgallant rail. It consists of wood strips that run horizontally across the bulwark (the railing on the upper part of the ship's deck) and are used to support the topgallant shrouds and stays.

---

**topgallant mast**

The topgallant mast is the mast that is next above the lower mast and is the topmost in a fore-and-aft rig. It is sometimes called the topmast or topmost mast, and it supports the topgallant yards and sails.

---

**topmark**

Topmark is the term used for one or more relatively small objects of characteristic shape and color placed on an aid to identify its purpose as an aid to navigation. These objects are commonly used in coastal areas to indicate hazards to navigation, or to mark the entrance to a harbor or other navigation area.

transport mode (n) (logist, shipping econ, geogr) transportation modes are an essential component of transport systems since they are the means by which mobility is supported. A wide range of modes that may be grouped into three broad categories based on the medium they exploit: land, water and air. (https://transportgeography.org/?page_id=100) vid transporta: Each transportation mode has its own requirements and features, and is adapted to serve the specific demands of freight and passenger traffic. This gives rise to marked differences in the ways the modes are deployed and utilized in different parts of the world. More recently, there is a trend towards integrating the modes through intermodality and linking the modes ever more closely into production and distribution activities. At the same time, however, passenger and freight activity is becoming increasingly separated across most modes. https://transportgeography.org/?page_id=100 [2020-01-04 18:30:33] [2019-07-23 19:01:55]

TSS (=traffic separation scheme) (n) (navig) = Traffic Separation Scheme A method of regulating the flow of vessel traffic moving in different directions. The term is defined by the International Maritime Organization (IMO) in its Resolution A/284 of November 20, 1973, as a scheme which separates traffic proceeding in opposite or nearly opposite directions, by the use of a separation zone or line, traffic lanes, or by other means. Today, traffic separation schemes are often part of Vessel Traffic Services (V.T.S.), in ports or restricted coastal areas; A zone or line separating the traffic lanes in which ships are proceeding in opposite or nearly opposite directions; or separating a traffic lane from the adjacent sea area; or separating traffic lanes designated for particular classes of ship proceeding in the same direction. During a short sea passage on a twin-engined ship, a motorman was cleaning around the turbo blower of one of the main engines. Turbochargers of Marine Engines are important part of the system as they utilise the waste heat of the exhaust in order to supply charge air for scavenging of the engine. The equipment consists of turbine and blower attached on the same shaft.

If the blow
er side cleaning is not carried out properly, then the supply of air to engine will be reduced, resulting in lack of air and improper combustion with black smoke. The Blower side of turbocharger is cleaned by fresh water. The engine is run at its full load rpm to achieve best possible cleaning.

turning of a ship (n) (ship handling) okretanje broda

Some Turning Basics

**Turning Circle** - A ship's turning circle is the path followed by the ship's pivot point when making a 360 degree turn.

**Advance** - Advance is the amount of distance run on the original course until the ship steadies on the new course. Advance is measured from the point where the rudder is first put over.

**Transfer** - Transfer is the amount of distance gained towards the new course (shown here for 90° heading change).

**Tactical Diameter** - Tactical diameter is the distance gained to the left or right of the original course after a turn of 180° is completed.

**Final Diameter** - Final diameter is the distance perpendicular to the original course measured from the 180° point through 300° (shown here for steady turning radius, R).

**Pivot Point** - A ship's pivot point is a point on the centerline about which the ship turns when the rudder is put over.

**Drift Angle** - Drift angle is an angle at any point on the turning circle between the intersection of the tangent at that point and the ship's keel line.

VDR /ˌviːdər/ (=Voyage Data Recorder) (n) (navig) VDRs, required for ships over 3,000
gross tons under international law, are the equivalent of 'black boxes' on aircraft, recording crucial data
such as radar images, position, speed and bring audio, among other data. (gCaptain
<info@gcaptain.com>); a complete system, including any items required to interface with the sources of
input signals, their processing and encoding, the final recording medium, the playback equipment, the
power supply and dedicated reserve power source. (IMO); VDR is a collection and storage device,
recording on a continuous loop, and records the command and control inputs of the vessel.

Vessel Traffic Service (=VTS; vessel traffic services) (n) (navig, safety) Vessel
Vessel Traffic Service Area

Traffic services deal with managing ship traffic on marine routes, suggesting best routes for a vessel and ensuring no two vessels run into each other on congested routes.

Vessel Traffic Services (VTS) are shore-side systems which range from the provision of simple information messages to ships, such as position of other traffic or meteorological hazard warnings, to extensive management of traffic within a port or waterway.

About 30 seconds before the collision Vessel Traffic Services (VTS) intervened to warn both vessels that they were running into danger but no response was received. The most commonly used sensing components of vessel traffic services are: 1. Radar system; 2. AIS; 3. Radio direction finder. The purpose of a Vessel Traffic Service (VTS) is to provide active monitoring and navigational advice for vessels in particularly confined and busy waterways. There are two main types of VTS, surveilled and non-surveilled. Surveilled systems consist of one or more land-based sensors (i.e. radar, AIS and closed circuit television sites), which output their signals to a central location where operators monitor and manage vessel traffic movement. Non-surveilled systems consist of one or more reporting points at which ships are required to report their identity, course, speed, and other data to the monitoring authority.

Victory ship COMPARE Liberty ship an emergency fast cargo vessels to replace the slower Liberty ships in World War II teretni brod tipa Victory (za prijevoz u konvojima u II. svjetskom ratu): On April 28, 1943, the new ships were given the name Victory and designated the VC2 type (V for Victory type, C for cargo, and 2 for a medium sized ship between 400 and 450 feet long at the waterline). The Victories could carry 10,850 deadweight tons (the weight of cargo a ship can carry) or 4,555 net tons (the amount of space available for cargo and passengers), a larger load than the Liberties could manage. Victory ships typically carried a crew of 62 civilian merchant sailors and 28 naval personnel to operate defensive guns and communications equipment. The Victory ships were different from the Liberty ships primarily in propulsion, the steam engine of the Liberty giving way to the more modern, faster steam turbine. The Victory ships had engines producing between 5,500 to 8,500 horsepower. Their cruising speed was 15–17 knots (approximately 18.5 miles per hour).

Weapons Department

The Electronics Technicians (ETs) and Interior Communications Electricians (ICs) operate and maintain the ship's electronic support systems. Primary responsibilities include the operational readiness, calibration and casualty control of the Exterior Communications System, Interior Communication System, Navigation System, Surface Search Radar System, and electronic equipment not specifically assigned to another division.

CM Division
The division consists of Fire Control Technicians responsible for the ship’s strike warfare mission. They operate the Tactical Tomahawk Weapon System Advanced Tomahawk Weapons Control System to launch Tomahawk Land Attack Missiles (TLAM) against deep strike targets. CM Division’s GMs operate and maintain the ship’s MK 41 Vertical Launch System.

CA Division
- is manned by Sonar Technicians Surface (STG) who are responsible for all sonar systems.
- The SONAR Technicians (STGs) operate and maintain the AN/SQQ-89 Integrated ASW Suite. The AN/SQR-19 Tactical Towed Array SONAR provides long-range passive detection of enemy submarines, while the AN/SQS-53C Hull-Mounted SONAR is used actively and passively to detect and localize submarine contacts.

CG Division
The Gunners Mates (GMs) in Ordnance Division are responsible for the safekeeping and transportation of almost all ammunition on board the ship, and most of the weaponry used to fire the ammunition. The MK 45 5”/54 Caliber Gun
Mount, in conjunction with the MK 34 Gun Weapon System, is used against surface ships and close hostile aircraft, and to support forces ashore with Naval Gunfire Support.; CG Division - is manned by Gunner's Mates (GM) who are responsible for the maintenance and operation of the 76mm Gun battery, the six torpedo tubes, guns, dual .50 caliber gun mounts and all crew served weapons.

Worldscale (=WS) (n) (shipping econ, mar law) An international index of freight for tankers. Worldscale is a schedule of freight rates for a standard ship in US dollars per tonne of oil for an array of oil routes. The rates listed in the table are designated as Worldscale Flat or WS100 and are revised.
annually. (http://www.clarksons.com/glossary/); Worldscale is a nominal worldwide tanker scale used to establish payment of freight services; Nominal freight scale applying to the carriage of oil and oil products in bulk by sea. An international freight index for tankers that provides a method of calculating the freight applicable to transporting oil by reference to a Standard Vessel on a round trip voyage from one or several load ports to one or several discharge ports. (www.worldscale.co.uk) međunarodni indeks tankerskih vozarina, međunarodna tablica tankerskih vozarina, Worldscale: The flat rate point 100 is effectively the breakeven point in accordance with the basis of calculation for the Worldscale Standard vessel but not for any other size. Worldscale includes expenses associated with ports, transit fees, port and voyage time and vessel bunker costs assessed in relation to the Worldscale Standard Vessel basis of calculation in order to produce a comparative nominal freight scale reported in dollars per tonne. Worldscale is used to calculate freight rates for oil tankers and product carriers. It is a tanker chartering tool, its principle is to provide the ship-owner with the same net return per day irrespective of voyage performed for the Worldscale Standard Vessel at WS100. Worldscale rates vozarinski stavovi izračunani prema tablici Worldscale: Worldscale Rates are based upon a 75,000 tonne total capacity vessel performing a round voyage and expressed in dollars per tonne of cargo. Any new Worldscale rate request will require mileage calculations, any voyage costs and port cost information. Rate calculations may involve several different route options to determine the cheapest. The final rate agreed will be determined as a percentage of the 'Worldscale' rate, based upon a guaranteed minimum quantity of cargo. This allows for charter parties to cover a wide range of possible voyage options without the need to calculate and negotiate each one separately. www.euronav.com
