1. Predgovor

Ovaj je rječnik sastavljen na temelju istraživanja hrvatskog pomorskog leksika iz brojnih izvora: znanstveni i stručni radovi i projekti o jeziku pomoraca i stanovništva hrvatskog priobalja i otoka, pomorski rječnici (hrvatski, engleski, talijanski itd.) i glosari od prvih povijesnih dokumenata do danas, udžbenici i priručnici iz područja pomorstva, obilje izvora s interneta itd.

Hrvatski pomorski jezik razvio je pomorski leksik i uže pomorsko nazivlje na bogatoj tradiciji hrvatskoga pomorstva, od osnovnih naziva iz zakarparskog razdoblja preko prvih jezičnih dodira s grčkim, talijanskim u prošlosti do kontakata s engleskim pomorski jezikom i nazivljem u posljednja dva stoljeća. Dokazi o prikupljanju, razvijanju i leksikografskom pa i terminološkom oblikovanju hrvatskoga pomorskog nazivlja datiraju već u starodalmatinskim i dubrovačkim pjesničkim radovima, a brojne pomorske nazive bilježi već i prvi hrvatski višejezični rječnik u 16. stoljeću (*Dictionarium quinque nobilissimarum Europae linguarum, Latinae, Italicae, Germanicae, Dalmaticae et Ungaricae, Venetiis* 1595). U razdoblju od 16. do kraja 19. stoljeća hrvatsko pomorstvo razvija svoj autohtoni leksik i nazivlje, stvaraju se novi pomorske nazivi po analogiji, polisemijom, metaforikom i jezičnim posuđivanjem, nerijetko prilagođavajući postojeće hrvatske riječi rastućim potrebama pomorske prakse, tehnologije, trgovine, prava i pomoračkog komuniciranja.

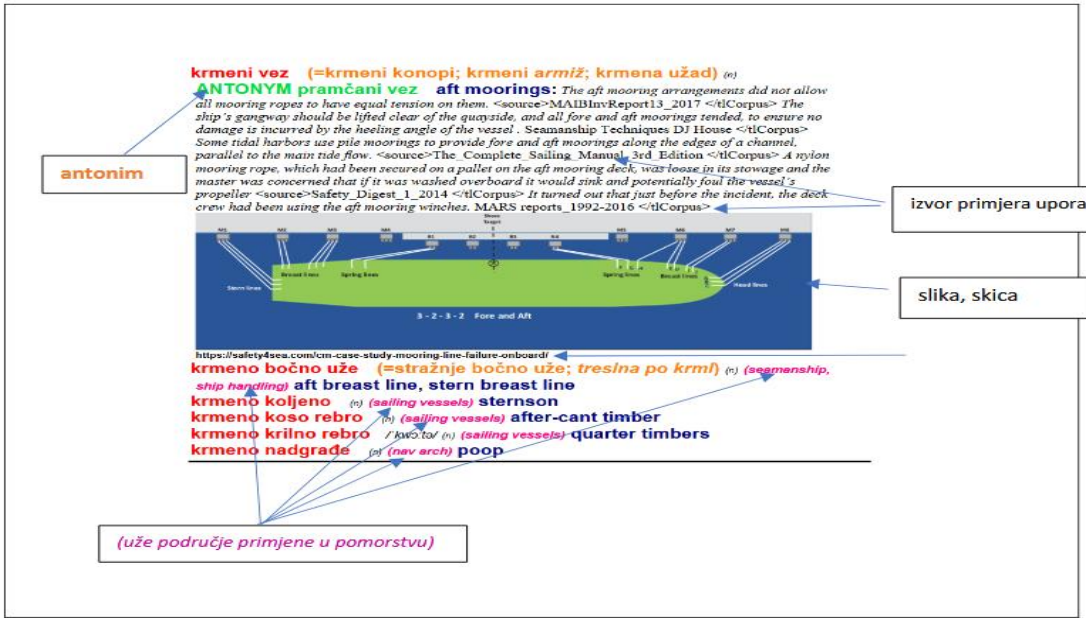
Hrvatski pomorski leksik se također nadograđuje i leksikom nastalim iz govornih i pisanih kontakata s gradovima, državama i flotama sredozemnog (prvenstveno mletačkog i južnotalijanskog) okruženja, ali i s drugih pomorskim zemljama (susreti s govornicima arapskog, holandskog, engleskog i drugih jezika). Taj se leksik odnosi na nazive brodova, osnovi (drvene) brodogradnje, umijeću navigacije, upravljanja i rukovanja brodom, održavanja brodova (jedrenjaka, galija, bracera, trabakula itd.), oceanografije, pomorske geografije, kartografije i meteorologije, poznavanja tereta, pomorskoga prava i prava mora, brodarstva i luka, komunikacije na moru itd. Ovdje valja spomenuti dubrovačku leksikografiju, opću i pomorsku, i terminološke radove J. Mikalje, J. Stullija i Kazalija.

Ključni su radovi toga razdoblja hrvatskoga pomorskog leksika nastali polovicom 19. stoljeća (j.A. Mikoč *Rječnik Rukokretni* 1852, Božo Babić *Morski riečnik* 1870; *Mladi mornar ili Put brodom iz Senja u Trst*, 1875) te u prvoj polovici dvadesetog stoljeća (Petar Mardešić *Brod (Pomorstvo, 1,* 1944), Zagreb; *Bodska nomenklatura*, Pomorstvo, Rijeka 1961, *Pomorska enciklopedija* i *Pomorski leksikon* itd.

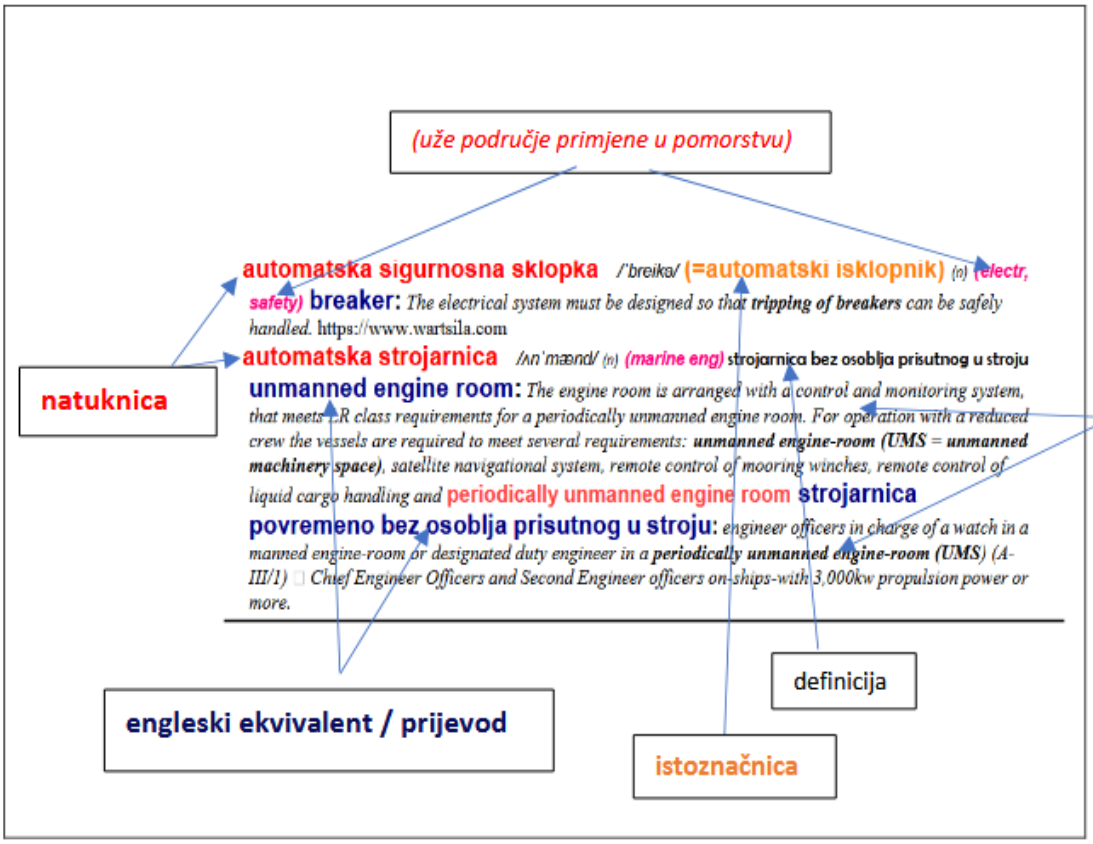
Prikupljanem, obradbom hrvatskoga pomorskog leksika i normiziranjem užeg pomorskog nazivlja za specifične namjene (npr. sigurnost plovidbe, komunicranje itd.) nastavlja se i u današnje doba posebice primjenom korpusne leksikografije (J. Luzer, A. Spinčić *Enciklopedijski brodostrojarski rječnik Englesko-hrvatski*, Školska knjiga, 2013; *Hrvatsko strukovno nazivlje / Struna): Brodostrojarstvo; Pomorstvo;* Institut za hrvatski jezik i jezikoslovlje, Zagreb 2010-2015; B. Plančić i T. Skračić. *Englesko-hrvatski pomorski rječnik*. Pomorski fakultet u Splitu; Split, 2017) te leksikografski radovi na pomorskim fakultetima i visokim učilištima u Hrvatskoj itd.), a slijede i izazovi uporabi umjetne inteligencije u terminološkim leksikografskim istraživanjima.

Pri izboru **hrvatskih pomorskih naziva** i pomorskog leksika nastojalo se (koliko to specifičosti hrvatskoga pomorskog nazivlja i pomorske uporabne prakse dopuštaju) poštivati, prilagođavati i primjenjivati načela hrvatske terminologije (Lana Hudeček i Milica Mihaljević: *Hrvatski terminološki priručnik*, Institut za hrvatski jezik i jezikoslovlje, Zagreb, 2010., 128 str.; STRUNA – Hrvatsko strukovno nazivlje http://struna.ihjj.hr/v4/index.php#). Ta načela uključuju sljedeće: d*omaće riječi imaju prednost pred stranima, proširenij i korisnicima prihvatljiviji naziv ima prednost pred manje proširenim, Naziv mora biti usklađen sa sustavom i normama hrvatskoga standardnog jezika itd.* Istodobno valjalo je ugraditi i iskustva iz prakse i tradicije hrvatskoga pomorskog nazivlja te potrebe poštivanja stvarne uporabe hrvatskoga pomorskog nazivlja.

Načela hrvatske terminologije / terminografije (cf. Hudeček-Mihaljević 2010) primjenjivala su se pri izboru oblika termina, ali i u njihovu redoslijedu.



- *Najprihvatljiviji nazivi (preporučeni nazivi)*
- *Dopušteni nazivi - nazivi su koji se susreću u struci kao potpune istoznačnice preporučenoga naziva, ali su po nekome kriteriju manje normativno prihvatljivi od preporučenoga naziva*
- *Nepreporučeni nazivi - nazivi su koji nisu prihvatljivi za uporabu u strukovnome jeziku jer su jezično neprihvatljivi ili pogrešno ili nepotpuno izražavaju pojam na koji se odnose.*
- *Zastarjeli nazivi - nazivi su koji se u jeziku struke više ne upotrebljavaju, ali se mogu naći u starijoj literaturi.*
- *Žargonizmi - nazivi koji se upotrebljavaju u neslužbenome razgovoru među stručnjacima, a često su posuđenice iz drugih jezika, metaforični izrazi i sl.*



Radi lašeg snalaženja u Rječniku one se pojavljuju bilo kao **natuknice** (s lijeve strane Rječnika) ili pak kao moguće istoznačnice ili bliskoznačnice hrvatskim nazivima u natuknicama. Također, upućuje se na najprihvatljiviji naziv u suvremenom hrvatskom pomorskim leksiku. To su uglavnom posuđenice iz talijanskog (u prošlosti) i engleskog jezika (u novije doba), primjeri dijalektalne uporabe i lokalnih govora, pomoračkog žargona (noštromizmi) ili substandardni oblici it. Ti su oblici vrlo živi u svakodnevnoj (govornoj) uporabi na brodu, među ribarima i među stanovnicima priobalja i otoka hrvatskog dijela Jadrana, uzimajući u obzir dijalektalne i lokalne razlike u akcentuaciji (mjesto i vrsta naglaska).

Ovaj rječnik slijedi definiciju pojma pomorstva, multidisciplinarnog sadržaja u najširem smislu (Cerić-Turina 1973) te se radi specificiranja značenja i uporabe pojedinih natuknica upućuje na odrednice područja pomorstva (navigacija, brodostrojarstvo, brodarstvo, komunikacije, pomorsko pravo, stabilitet, rukovanje treteom, luke itd. (vidi Upute o uporabi rječnika).

S obzirom da ovaj rječnik predstavlja prvu inačicu elektronički obrnutog Englesko-hrvatskog pomorskog rječnika (https://www.pfri.uniri.hr/bopri/IMEC_Proceedings/Rjecnik_Eng_Hrv.pdf) i tek početnu ručnu obradu od strane urednika, pozivaju se stoga korisnici da svojim prijedlozima, kritikama, dopunama i izmjenama, kako hrvatske tako i engleske strane Rječnika, doprinesu ustavljanju rječnika i hrvatskog nazivlja (sukladno navedenim načelima) kao i lakoći korištenja istog.

2. Upute za uporabu Rječnika

Natuknica = Natuknice na hrvatskom jeziku nalaze se na lijevoj strani rječnika. One mogu biti:
(a) jedna riječ (**pristanište, ojnica**) ili
(b) natuknica sastavljena od više riječi (**časnik straže, preusmjeriti putovanje broda)**

Natuknice, tiskane kosim pismom (***gindac, lantina, škotina, gajeta, remorker, štelamorta*** itd.), označuju nazive stranog podrijetla (talijanskog, engleskog itd.) u hrvatskom pomorskom leksiku. One su prisutne u svakodnevnom govoru hrvatskoga priobalja i otoka te u dugotrajnoj uporabi u komunikaciji na brodovima.

Pri izboru natuknica vodilo se računa o sljedećem:

a) Prednost pri izboru i redoslijedu sinonima i bliskoznačnica imaju riječ / nazivi **hrvatskog podrijetla**
b) U popis natuknica unose se sve riječi / nazivi u formalnoj i **neformalnoj uporabi** (razgovorni jezik na brodovma; govori hrvatskog priobalja i otoka; posuđenice; zastrajele riječi)
c) Raspored hrvatskih natuknica: 1 **najprihvatljiviji** (preporučeni) nazivi; 2 **dopušteni** nazivi, 3 posuđenice, 4 prevedenice itd.
d) Pristup ovom rječniku je prvenstveno leksikografski (deskriptivan), a tek u manjoj mjeri preskriptivan, tj. samo u slučaju kada se radi o terminološkim uputama i napomenama.

Izgovor engleskih prijevodnih ekvivalenata = znakovi prema IPA (International Phonetic Association)

= (oblici istog, sličnog ili srodnog značenja)

Vrste riječi = *n* (imenica), *v* (glagol), *adj* (pridjev), *adv* (prilog), *prep* (prijedlog), *prijedložni izraz*, itd.

Podnatuknice(= višerječni izrazi u crvenoj boji) su višerječni nazivi na engleskom jeziku s hrvatskim ***ekvivalentom / prijevodom*** (u plavoj boji)

- Riječ (npr. pridjev, imenica) ili kombinacija riječi **+ natuknic**a, npr**. *imminent danger = neizbježna opasnost; _anchor cable = sidreni lanac***
- **Natuknica +** riječ ili kombinacija riječi, npr. **pay out the anchor cable** = ***puštati sidreni lanac***

Odrednice područja uporbe u pomorstvu: = (*usage labels*) ukazuju na područje primjene u pojedinim disciplinama pomorstva. U ovom Rječniku te se odrednice odnose na sljedeća područja primjene:

***arch**(aic) = zastarjelo* ***sailing/boating/yachting** = jedrenje, brodice* ***cargo** = tereti* ***cargo handling** = rukovanje teretima* ***chem(ical)** = kemija* ***communications** = pomorske komunikacije* ***el(ectrical engineering)** = elektrotehnika* *(marine) **environment** = morski okoliš* ***figurative** = figurativna uporaba* ***financ**(ial) = financije* ***fishing** = ribarstvo* ***geogr(aphical)** = geografija* ***human-resources** =ljudski resursi* ***inland waterways** = unutarnja plovidba* ***insur**(ance**)** = pomorsko osiguranje* ***jargon =** žargon, dijalektizmi, lokalni govori* ***logist**(ics**)** = logistika u pomorstvu* ***mar**(itime) **law** = pomorsko pravo; pravo mora* ***math**(ematical) = matematika*	***med**(ical) = medicina* ***meteorology** = meteorologija* ***navig**(ation) **=** navigacija* ***naval arch(itecture)** = brodogradnja, konstrukcija broda* ***oceanogr**(aphy) = oceanografija* ***phys**(ics) = fizika* ***ports =** luke* ***sailing vessels =** jedrenjaci, doba jedara* ***seam**(anship) = pomoračke vještine* ***ship_equipment** = brodska oprema* ***ship handling (**& line handling) = rukovanje / manevriranje brodom* ***shipping economics** = ekonomika brodarstva* ***stability** stabilitet broda* ***UK** = pretežito u britanskom engleskom* ***US** = pretežito u američkom engleskom* ***wooden ships =** drveni brodovi / brodice*

Definicija + izvor definicije Definicije, izvori definicija; ostale definicije su prilagodbe tekstova ili predložene od strane urednika

= Uputnice = (references) upućuju na značenjski srodne riječi i njihove semantičke odnose: **equivalence** (istovrjednice), **synonyms** (istoznačnice), **antonyms** (riječi suprotna značenja); **see (vidi), compare** (usporedi)

Značenja 1, 2, 3 … = brojke označuju različita, srodna i slična značenja iste natuknice. One su popraćene odrednico područja primjene u pomorstvu (npr. *brodogradnja, navigacije, brodsko strojarstvo, logistika* itd.: *naval architecture,navig, marine engineering, seamanship, ship equipment, sailing/boating, safety, cargo handling, jargon, obsolete, chemical, medical, UK, US etc.*)

Engleske istovrjednice / prijevodni ekvivalenti (TE) = engleske istovrjednice ili prijevodni ekvivalenti (TE), koji odgovaraju **natuknicama** (headwords) i **podnatuknicama** (sub-entries) na hrvatskom jeziku.

Kosim slovima (uvedene znakom **=**) otisnute su istoznačne **riječi** koji ne pripadaju standardnom hrvatskom leksiku, ali su prisutni u svakodnevnoj uporabi, npr. ***prova, inprovan, štiva, blackout, lockdown*** itd.:

inprovan **(=*aprovan*)** *(adj)* ***(stabil)*** **SEE** **pretežan brod** pretežan brod; brod koji ima pramčani trim, gaz je veći na pamcu **trimmed by the bow**

Radi lašeg snalaženja u Rječniku one se pojavljuju bilo kao **natuknice** (s lijeve strane Rječnika) ili pak kao mogue **istoznačnice ili bliskoznačnice** (označene znakom **=**) nazivima u natuknicama. Na istoznačne, slične i srodne nazive u suvremenom hrvatskom pomorskim leksiku upućuje sljedećim uputnicama:

It also continuously receives data from other vessels and VTS stations and, when linked to radar or ECDIS, can also display this data. AIS transmits: static data (MMSI number, call sign and name, IMO number, length and breadth, type of ship, location of position fixing antena), dynamic data (ship's position, position time in UTC, course over grouns, speed over ground, heading, navigational status, rate of turn), and voyage data (ship's draught,m hazardous cargo, destination and ETA, route plan - waypoints) (Seamanship Notes 2004).; AIS is a navigation and anti-collision tool enabling the exchange of ship-to-ship information. **automatski identifikacijski sustav**, **sustav automatske identifikacije brodova**, ***AIS*****:** ***AIS should be operational*** *at all times* ***AIS system*** *is used to exchange vessel and navigation data including vessel name and call sign, length and beam, position with accuracy indication and integrity status, course, speed, heading and ROT and other specific information, all in real time. astronomska navigacija (= nebeska navigacija) *(n)* ***(navig)*** Celestial navigation systems are based on observation of the positions of the Sun, Moon, Planets and navigational stars. Such systems are in use as well for terrestrial navigating as for interstellar navigating. By knowing which point on the rotating earth a celestial object is above and measuring its height above the observer's horizon, the navigator can determine his distance from that subpoint. A nautical almanac and a marine chronometer are used to compute the subpoint on earth a celestial body is over, and a sextant is used to measure the body's angular height above the horizon. That height can then be used to compute distance from the subpoint to create a circular line of position. A navigator shoots a number of stars in succession to give a series of overlapping lines of position. Where they intersect is the celestial fix. The moon and sun may also be used. The sun can also be used by itself to shoot a succession of lines of position (best done around local noon) to determine a position (Bowditch 2002) celestial navigation, astronomical navigation practise celestial navigation provoditi astronomsku navigaciju, primijeniti astronomsku navigaciju {Used primarily as a backup to satellite and other electronic systems in the open ocean.}

(SAFETY4SEA <news@safety4sea.com>); the undesirable accumulation of various aquatic organisms on ship's hulls **biofouling, hull biofouling :** *These organisms, known as invasive aquatic species, can negatively affect a ship's operation, while they also present a threat to the marine environment.* Some studies have suggested that hull biofouling is a far more important vector for the transfer of invasive species than ballast water. *Some studies have suggested that hull biofouling is a far more important vector for the transfer of invasive species than ballast water.* Some studies have suggested that hull **biofouling** is a far more important vector for the transfer of invasive species than ballast water. ***Biofouling****, the accumulation of aquatic organisms on vessel surfaces, has long plagued the maritime industry. Although hidden beneath the waves, the layers of algae, barnacles, and mussels that attach themselves to vessels are creating a visible impact on fuel consumption and emissions.* https://gcaptain.com *From the moment a ship hits the water, the biofouling process begins. If left unchecked, microorganisms attach to submerged surfaces, creating a biofilm that invites macro-fouling organisms like barnacles and mussels. This build-up*

significantly increases drag, forcing engines to work harder to maintain speed, which in turn leads to higher fuel consumption and emissions https://gcaptain.com

čarter */ˈʧaːtəˌpaːti/* **(=ugovor o najmu broda; pomorski ugovor o najmu; ugovor o iskorištavanju broda; čarter-partija)** *(n)* ***(mar law)*** a contract of lease of a ship in whole or in part for a long or short period of time or for a particular voyage. It has been said that its origin lies in the mediaeval Latin carta partita or charta partita or charta divisa, where an agreement was torn into two pieces and one half was given to each party. Proof of the whole contract was no doubt difficult if one party was obstinate - modern methods of photocopying the contract for each party seem preferable. A charterparty is part contract of hire (affreightment (supra)) and part contract of transport (carriage). The proportion of affreightment decreases as one moves from a demise charter, to a time charter and then to a voyage charter, while the proportion of carriage increases from a demise charter through a time charter to a voyage charter. Affreightment is essentially placing a ship at the disposal of another party, while transport is essentially the carrier (supra) taking charge of goods. Hire (infra) is the consideration paid under demise and time charterparties; freight (infra) is the consideration paid under voyage charterparties and bills of lading . **charterparty, , charter party , charter, talij. *noleggio*:** *The typical tramp operates under a **charter party**, that is, a contract for the use of the vessel.*

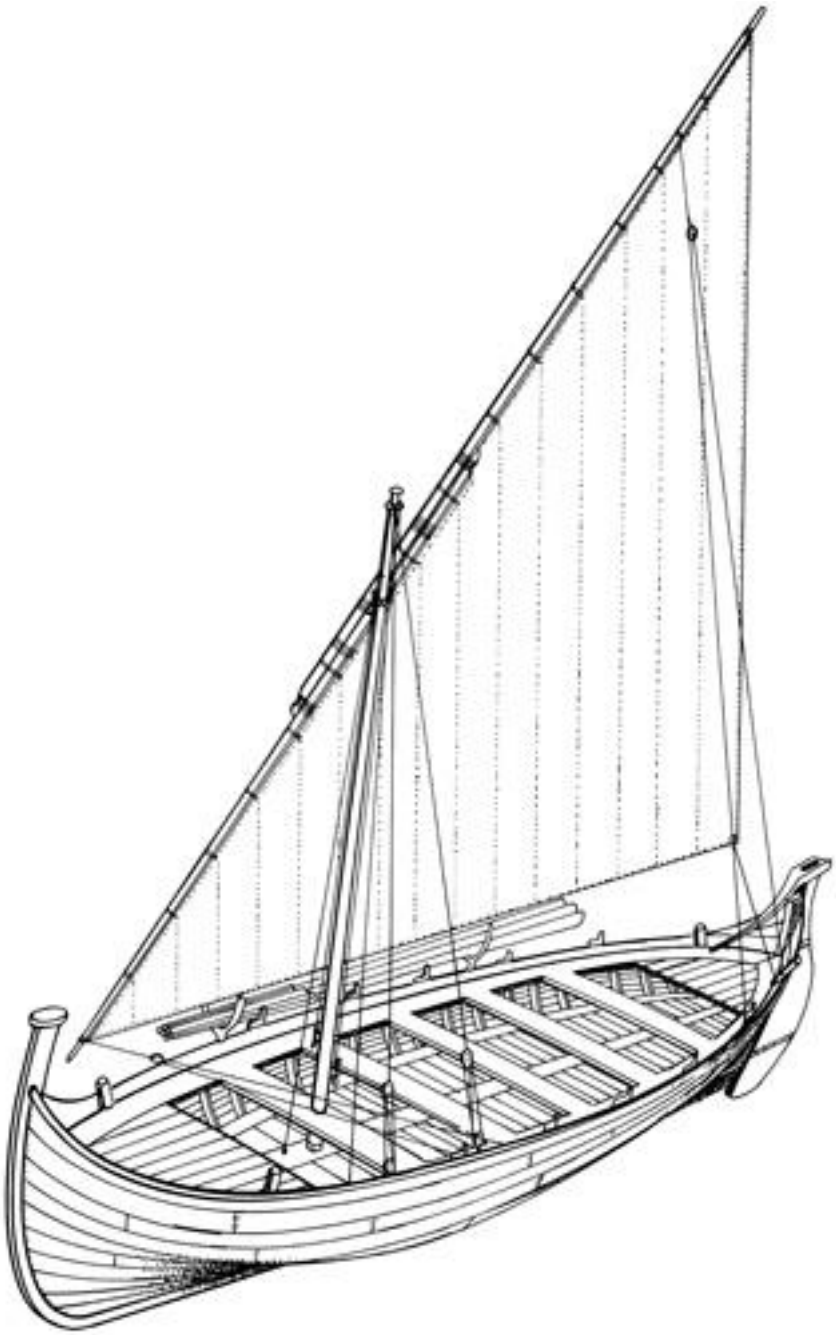
(www.gajetafalkusa.com/iz-gajetine-skrinje-2) **half-decked one-masted fishing boat**, **gaeta** **betinska gajeta** Betinska gajeta nastala je pod utjecajem korčulanske brodogradnje, kada se 1745. korčulanski brodograditelj Paško → Filipi doselio u Betinu na Murteru i ondje osnovao prvo brodogradilište. Zadržana je klasična korčulanska tehnologija gradnje drvene brodice (metoda dodirivanja platica). Forma je prilagođena uvjetima kornatskog i murterskog akvatorija i potrebama tamošnjega stanovništva, kojemu je brodica ponajprije služila za prijevoz prema posjedima na Kornatskim otocima, a zatim kao ribarica. (https://tehnika.lzmk.hr/gajeta/)



https://tehnika.lzmk.hr/gajeta/, **korčulanska gajeta** Gajeta korčulanka se stoljećima gradila na području Korčule i bliže okolice i najdugovječniji je istočnojadranski tip gajete. Od ostalih se razlikuje po podvodnome dijelu koji je ribolik, dok joj je nadvodni dio malo zatupljen, a prijelaz s podvodnoga u nadvodni dio oštar, u ribarica često i prenaglašen. Pramac do jarbola pokriven je palubicom, s lijeve strane nisko ograđenom palubnim obrubnikom (kuvertela, murada, partigeta, faka), s bočnim rubnicima kojima se zatvarala razma (koriduri). Gradila se duljine 4–10 m, nosivosti do 6 t, a opsluživala su je dva do četiri člana posade. (https://tehnika.lzmk.hr/gajeta/), **lovranska gajeta** Gajeta lovranka (lovranski guc) se također razvila iz korčulanske brodograđevne tradicije, što ju je u Lovran prenio Nino Gašparinić, koji je 1950. učio gradnju drvenoga broda u Korčuli. Vrativši se u Lovran, zadržao je temelje korčulanske tehnologije gradnje drvenoga broda, prilagodivši ih lokalnim uvjetima i novoj ulozi. Gajeta lovranka ima kratak jarbol (arburet) koji nosi tendu, pokreće se veslima i ugrađenim motorom, a namijenjena je obiteljskomu krstarenju, prijevozu turista i sportskomu ribolovu. Dobila je ime po oplatnim nadogradnjama (falcima), daščanim konstrukcijama nad bokovima koje su imale ulogu povišene palubne ograde (linice) i mogle su se skidati tijekom ribolova. Postavljale bi se pri povratku s ulovom, čime se nadvođe natovarene brodice povećavalo za približno 60 cm. Bila je duga 8,5–10 m, široka 2,5–3,2 m, nosivosti 5,5–8 t. Radi lakšega veslanja i izvlačenja na stjenovitu obalu te

veće brzine u utrkama do najboljih ribarskih pošta, bila je čvrste, ali lagane građe.

Na Korčuli je bila duga 4–10 m i nosivosti 3–6 t, u srednjoj Dalmaciji, kao teretna, težačka brodica, dosezala je duljinu do 12 m i nosivost 5–12 t, a na Visu (falkuša) bila je duga 8,5–10 m i imala nosivost 5,5–8 t; kraće brodice (4–5 m) zvane su gajeticama. Prvi galijuni imali su dvije palube, na pramcu kod prednjega jarbola visok kaštel, a na krmi još viši dvokatni kasar. Snast im se sastojala od strmoga kosnika i triju jarbola od kojih je svaki imao po jedan okrugao koš. Pod kosnikom se razapinjalo posrtno jedro, na pramčanom i središnjem jarbolu po dva križna jedra, a na krmenom latinsko jedro. GNSS receiver *(n)* ***(navig)*** GNSS Receivers are the core product for satellite positioning. They convert signals from visible satellites into a position on earth. The amount of visible satellites is dependent on the number of constellations the receiver is compatible with, such as GPS, Glonass, Galileo and Beidou. (https://geo-matching.com/gnss-receivers); GNSS receivers determine the user position, velocity, and precise time (PVT) by processing the signals broadcasted by satellites. Because the satellites are always in motion, the receiver has to continuously acquire and track the signals from the satellites in view, in order to compute an uninterrupted solution, as desired in most applications. Any navigation solution provided by a GNSS receiver is based on the computation of its distance to a set of satellites, by means of extracting the propagation time of the incoming signals travelling through space at the speed of light, according to the satellite and receiver local clocks. This time difference is transformed into a fake range, the "pseudorange", by multiplying it by the speed of the light in the vacuum, R=c×dt. The pseudorange might be seen as a very rough estimate of the true range between satellite and user, and

has to be corrected to account for a number of phenomena before it can be interpreted as a precise measurement of the true distance.

International Maritime Organization (=IMO) *(n)* the IMO is a specialised agency of the United Nations with 168 Member States and three Associate Members. The IMO's primary purpose is to develop and maintain a comprehensive regulatory framework for shipping and its remit today includes safety, environmental concerns, legal matters, technical co-operation, maritime security and the efficiency of shipping. (https://www.msc.com/shipping-glossary) **Međunarodna pomorska organizacija (IMO):** *All the officers and ratings must read and acknowledge **IMO circular** MSC1/Circular 1206 'Measures to prevent accident with lifeboats'. Further, and again in line with ISPS, within mandatory reporting areas, **IMO should encourage** authorities to primarily use passive surveillance techniques (radar), relying on AIS only to the extent necessary for positive identification .. ' In February 2013, Canada and the Republic of Korea submitted a proposed amendment to the ISM Code to the **IMO Sub-Committee on Standards of Training and Watchkeeping**. However, since the level of luxury on larger yachts has seen an increasing trend, the use of the word yacht to mean any sailing vessel has been diminishing and is more and more limited to racing yachts or cruising yachts. Yacht lengths generally start at 32-35 feet (10-11 m) and go up to hundreds of feet. A mega yacht generally refers to any yacht (sail or power) above 100 ft (34 m) and a super yacht generally refers to any yacht over 200 ft (70 m). This size is small in relation to typical cruise liners and oil tankers. (SeaSources.net}

means a person who has the experience and has passed the required examination to be licensed to command a vessel according to both international and national regulations pertaining to the size and range of the vessels in which the experience was obtained. Captain is a general and informal term referring to someone in the act of performing in that capacity. Master refers to professional qualification, captain to a state of command or authority. It seems like this isn't getting any simpler, but separating the historical meanings of captain and master shows us the way forward. In commercial shipping, master has an official regulatory meaning while captain does not. (http://gcaptain.com/call-captain-not/)}

karaka /ˈkærək/ *(n)* ***(nav arch, sailing/boating/yachting)*** a three- or four-masted ocean-going sailing ship that was developed in the 14th to 15th centuries in Europe, most notably in Portugal and Spain. (https://en.wikipedia.org/wiki/Carrack); a large galleon of the 15th C; veliki trojarbolni teretni jedrenjak u XIV–XVII. st. Bila je obla trupa s uzdignutim pramcem i krmom, veća od karavele, ali sporija i slabijih manevarskih sposobnosti. Pojavila se početkom XIV. st. u Veneciji, a gotovo istodobno počela se graditi i u Dubrovniku. Tijekom XV. st. proširila se Sredozemljem i odatle do Nizozemske. U XVI. st. pojavila se velika karaka s četiri jarbola, karakun. Potkraj XVII. st. ustupila je mjesto velikim jedrenjacima za prekooceansku plovidbu. (https://tehnika.lzmk.hr/karaka/) **carrack dubrovačka karaka** Dubrovačka karaka XVI. st., namijenjena za plovidbu Sredozemljem i obalama Atlantika do engleskih i flandrijskih luka, znatno je poboljšana inačica dubrovačke → koke. Bila je duljine 38–40 m, širine 14–15 m, visine boka 9–10 m, gaza 5 m, nosivosti 950–1250 t. Imala je do 40 obrambenih topova i do 100 članova posade. Trup joj je bio srcolika oblika, prikladniji od oblika za uvjete plovidbe Atlantikom, a takav su revolucionarni oblik trupa europski brodovi preuzeli tek stoljeće kasnije. Na glavnom jarbolu bila su dva križna jedra, na pramčanom jarbolu veće križno jedro, a na krmenom latinsko; na sva tri jarbola bili su koševi. (https://tehnika.lzmk.hr/karaka/) **Ragusan Carrack**
