One is where the tanker is moored along side a rigid that comes down from the tower and the other being when the tanker is moored from the bow. Common for both is that a floating hose is connected to the turntable at the dower so the tanker will still move according to environmental forces.*

logist) Blank sailing occurs when, due to various reasons, a liner service operator might decide to cancel the call of a vessel at a certain port or certain region, or the entire leg. When that happens, that particular port/region/entire route will have a "blank sailing" which simply means that for that week or fortnight or month (depending on the frequency of the liner service) that area will not have a vessel to discharge or load cargo (https://shippingandfreightresource.com/blank-sailing/); When an ocean vessel does not call at one or more of its scheduled intermediate stops, it is called a **blank sailing** or void sailing from these ports. (https://www.marineinsight.com/maritime-law/what-is-blank-sailing/); A blank sailing (a void sailing) is a sailing that has been canceled by the carrier. A blank sailing could mean a vessel is skipping one port, or that the entire string is canceled. (https://www.flexport.com/); the cancellation or omission of a scheduled port or region by an ocean carrier during a fixed rotation. This is typically due to market dynamics such as low demand, which causes carriers to consolidate shipments and stabilise rates. projektiranje broda (=design) *(n)* ***(nav arch)*** The ship design process may be broken down broadly into two stages: Conceptual and/or preliminary design and detailed or tender or contract design. The preliminary design process will normally take the form of a techno-economic appraisal, using a fundamental engineering economy approach. The ship owner's operational requirements need to be established during preliminary designing, which then allows the development of a basic specification such as deadweight, speed, range, capacity, stability, and freeboard. (IAMSAR/Camsar2014=Canadian Coast Guard)); There are two types of distress beacons regulated for use: .1 COSPAS-SARSAT 406 megahertz (MHz) emergency locator transmitters (**ELTs**), emergency position-indicating radio beacons (EPIRBs) and personal locator beacons (PLBs), and .2 Very high frequency (VHF) digital selective calling **(DSC) EPIRBs** (IAMSAR/Camsar2014=Canadian Coast Guard)); In the system of SAR, beacons use radio signals to indicate distress. Each unit has a built-in transmitter and batteries. Two main beacon types interest the Coast Guard: an Emergency Locator Transmitter (**ELT**), designed for aircraft and an Emergency Position Indicating Radio Beacon (**EPIRB**), designed for vessels. Both transmit a radio signal when activated. Unlike most ELTs, EPIRBs transmit a coded message that indicates the identity of the beacon in use. A third type of beacon, which operates through the satellites for use on land, is the Personal Locator Beacon (**PLB**) class. rashladni sustavi - vrste Refrigerants are common in the marine industry, from chilling and freezing the catch on fishing vessels to air conditioning on cruise ships. Yet the refrigerant types are changing rapidly. Chlorofluorocarbon (CFC) and hydrochlorofluorocarbon(HCFC) refrigerants have given way to hydrofluorocarbon (HFC) refrigerants, and now many shipowners are exploring natural refrigerants like CO2.

EMERGENCY MUSTER LIST

This muster list must be completed in compliance with SOLAS Chapter III Regulation 37 and the Company Safety Manual.

FIRE OR OTHER INCIDENT
Signal: Continuous sounding of the ship's alarm system.
Action: Emergency parties muster at designated stations with warm protective clothing and lifejackets in hand. All non-tasked personnel collect warm clothing, don lifejackets and muster at: _____

GENERAL EMERGENCY
Signal: Seven or more short blasts followed by a long blast on the ship's whistle, repeated on the ship's alarm system.
Action: All personnel to don lifejackets and warm clothing and muster at designated stations. Reserve Team to prepare lifesaving appliances for launching.

ABANDON SHIP
Signal: _____ The order to abandon ship will be given ONLY by the Master or his substitute.
Action: Proceed in an orderly manner to your designated lifeboat or raft wearing lifejackets and warm clothing. The person in charge will take a roll call before launching.

MAN OVERBOARD
Signal: _____
Action: Throw Lifebuoy. Immediately inform the officer of the watch (Tel. _____) state "Man overboard" and give location; Keep the casualty in sight.

{The tide is stemmed, alternately the wind, if it has stronger influence. In case the two are from slightly different directions, as shown, the weather anchor is let go with engines going dead slow ahead. The engines may be stopped as required, maintaining the headway. The anchor cable is continuously paid up to say 9 shackles (the total of the final shackle lengths). The vessel will tend to stop due to the springing back or slackening of cable. This will be also due wind and tide which were stemmed. Now, the lee anchor is let go and the cable paid out. The slack on the weather anchor cable is picked up as the vessel drops astern. The vessel may need astern propulsion to move astern. Once the vessel has reached the position, (half way between i.e. 4.5 shackles on each cable) the lee anchor becomes the riding cable. Your benefits

- High design pressure, therefore suitable for various applications on board.
- Versatile connections for easy installation.
- Hot dip galvanised corrosion protection according to ISO 1461*.
- Approved by all major classification societies: LLR, BV, DNV, ABS, RINA, GL*.
- Including all necessary ancillaries for instance:
  - 100 mm dial Glycerine filled pressure gauge c/w test flange.
  - Drain valve.
  - Safety valve.
- Horizontal versions on request.

For now, it should suffice to understand that when a ship is flooded, it results in a change of KB and BM values. The KB rises due to flooding, and it may rise further due to change in the ship's trim. However, there is a significant reduction in BM, which is a function of the area moment of the ship's water plane. Why? We will look into that when we study the Lost Buoyancy Analysis.*

teretnica (=B/L; konosman; *navao*; *naval*) *(mar law, shipping econ)* A document issued by a carrier, or its agent, to the shipper as a contract of carriage of goods. It is also a receipt for cargo accepted for transportation, and must be presented for taking delivery at the destination. (http://www.businessdictionary.com/definition/bill-of-lading-B-L.html); Originally called a bill of loading, a bill of lading is not necessarily the complete contract of carriage of goods but is usually the best evidence of the contract. It is, as well, a receipt signed by the master or on his behalf indicating in what apparent order and condition the goods have been received on board. Finally, it is also a document of title and thus a document of transfer, but not a negotiable instrument (Tetely); Legal document signed by or for the captain/master, agents, owners of a vessel or the (common) carrier. It is written evidence of the contract of carriage by sea and/or by land. TSS (=traffic separation scheme) *(n)* ***(navig)*** **= shema odvojene plovidbe (TSS)** A method of regulating the flow of vessel traffic moving in different directions. The term is defined by the International Maritime Organization (IMO) in its Resolution A/284 of November 20, 1973, as a scheme which separates traffic proceeding in opposite or nearly opposite directions, by the use of a separation zone or line, traffic lanes, or by other means. Today, traffic separation schemes are often part of Vessel Traffic Services (V.T.S.), in ports or restricted coastal areas; A zone or line separating the traffic lanes in which ships are proceeding in opposite or nearly opposite directions; or separating a traffic lane from the adjacent sea area; or separating traffic lanes designated for particular classes of ship proceeding in the same direction.

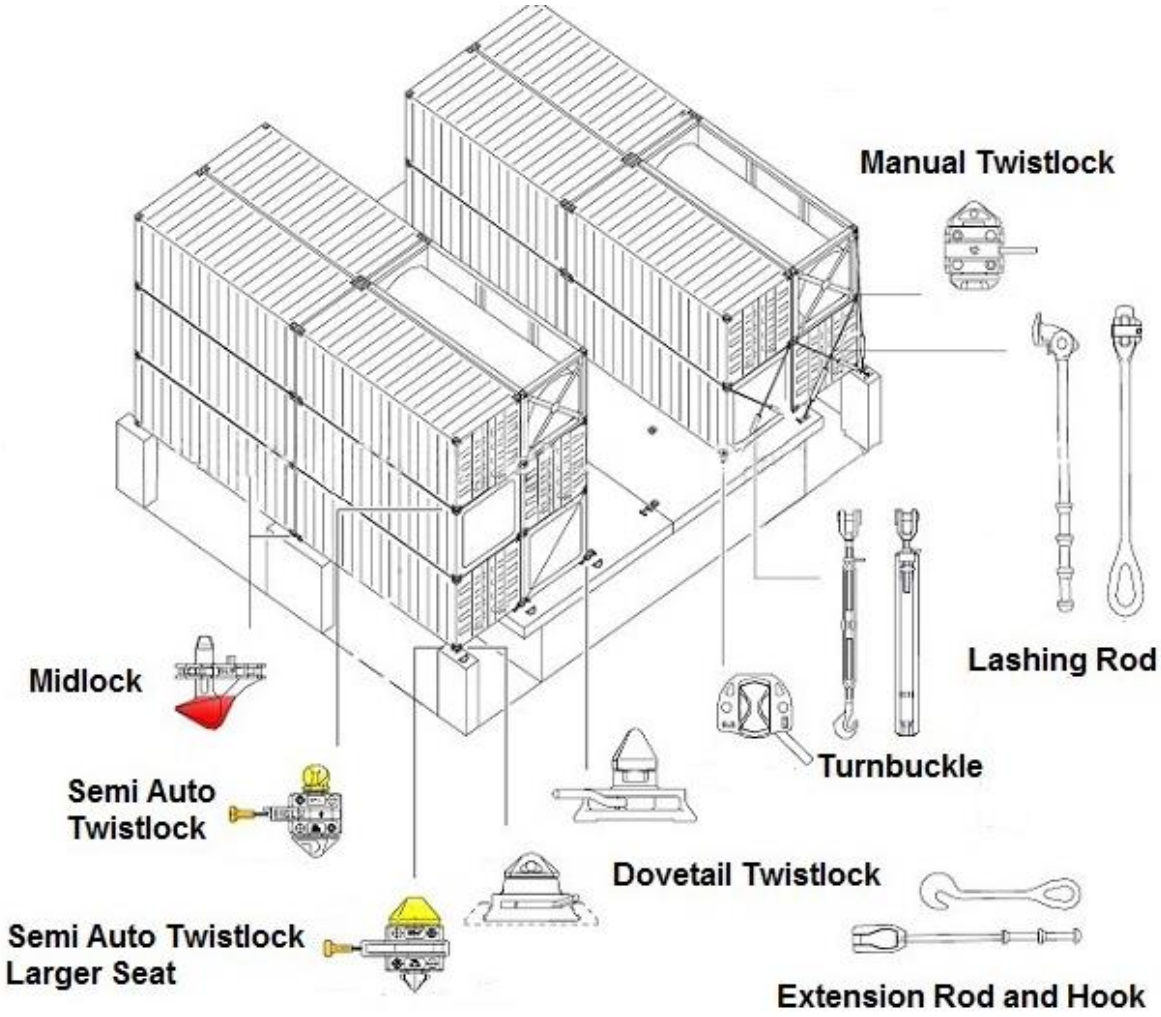
Fixed fitting (attached to ship)



Description	Purpose	Image	Notes
Flush socket	Locating base twistlocks or stacking cones in the cargo hold.		Normally fitted over a small recess to ensure watertightness. Clean and remove debris before use.
Raised socket	Locating base twistlocks or stacking cones on deck.		Clean and remove debris before use.
Lashing plate or 'Pad-eye'	Tie-down point for turnbuckle.		Designed only for in-plane loading. An out-of-plane (out-of-line) load could bend the plate and may crack the connecting weld.
D ring	Alternative tie-down point for a turnbuckle.		Corrosion of the pin ends can weaken a D ring. Suitable for in-plane (in-line) and out-of-plane loading.
Dovetail foundation	Base for sliding dovetail twistlock.		Clean before use. Keep well greased and examine regularly for damage or wear.
Fixed stacking cone	To prevent horizontal movement of 20-foot containers in 40-foot cell guides.		Often found at the base of a cell guide.
Mid-bay guide	To prevent transverse movement of 20-foot containers in 40-foot guides. Fitted at tanktop level.		Does not interfere with general stowage of 40-foot containers.

Description	Purpose	Image	Notes
Lashing rod	To provide support for container stacks on deck. Used in conjunction with a turnbuckle.		Resists tensile loads. Very long lashing rods can be difficult to handle and difficult to locate in a container corner casting. They can have eyes at each end.
Extension piece	To extend a lashing rod when securing 'high cube' containers.		Fit at the base of a lashing rod and connect to the turnbuckle.
Turnbuckle (bottle screw)	To connect a lashing rod to a lashing plate or D ring. Tightening puts tension into a lashing rod.		Resists tensile loads and is used to keep the lashing tight. Regularly grease its threads. Ensure the locking nut or tab is locked.
Hanging stacker	Used in holds when 20-foot containers are carried in 40-foot guides. Locks into corner casting above.		Resists horizontal forces. Likely to be put in place when container is on shore because of difficulty in fitting when on board.
Semi-automatic twistlock (SAT)	Placed between containers in a stack. Locks into corner castings above and below.		Resists horizontal and separation forces. Can be fitted on shore. Automatically locks into the lower container when placed on top. It is easier to determine whether it is locked or not when compared to manual twistlocks. Unlocked manually.
Twistlock	Placed between containers in a stack. Locks into corner castings above and below.		Resists horizontal and separation forces. Each fitting requires locking after fitting. Left and right-hand types exist, causing uncertainty whether a fitting is locked or open.
Stacking cone	Placed between containers in a stack. Slots into corner castings.		Resists horizontal forces. Many types exist. May be locked into bottom corner castings prior to lifting a container on board.

Maintenance of machineries has to be carried out regularly. Considering the ships situation, various tools, parts and materials are required to be always available onboard. Clear and good understanding of tools, parts and materials are beneficial to engineers for proper upkeep and inventory of tools.

8.1 Maintenance Tools

8.1.1 Hand Tools

a. Hand Spanner/Wrenches

There are different types of hand spanner and wrenches that are available in the work shop which could be selected depending on the type and condition of maintenance work to be done.

Example usage of hand spanner and wrenches:

i. Adjustable wrench is used as easy tool for undetermined size of bolt and nut when immediate tightening is required.
ii. Adjustable pipe wrench is suitable for fastening/loosening small sizes threaded pipes and damage head bolt in an awkward position.
ii. Slogging spanner is used for loosening and tightening big sizes of bolts using hammer.
iv. Instead of adjustable pipe wrench, hook spanner is used for threaded cap connection with teeth to avoid damaging the cap.
v. Offset spanners are used when working in an awkward position jobs.
vi. Square drive wrench is specially used for square bolts or handle.
vii. Torque wrenches are used for a specified torque controlled tightening of bolts and nuts.

Te mjere dovođenja broda u vremenski okvir plovidbenog reda su "recovery measures", a među njima je često CUT&RUN. To znači da se donosi odluka da brod u određenom trenutku prekida trgovačke operacije u luci, te određeni teret ostaje na obali neukrcan. To dovodi do preusmjeravanja bukiranog tereta na drugi raspoloživi brod (=cargo rollover). U tim slučajevima teret ostaje neukrcan i mora se pre-bukirati se na sljedeći brod. (personal information: Jakov Karmelić 2021); ranije završiti operacije iskrcaja/ukrcaja tereta (uslijed zaostajanja broda u njegovu plovidbenom redu); terminate discharge/loading operations before all the boxes have been discharged or loaded in order to maintain schedule..
