

AI-POWERED CATALOGUING

A Practical Guide to Building a Cataloguing
Application with Power Apps

HANNES LOWAGIE

Contents

Figures and Tables	xiii
About the Author	xv
Foreword by Sara Lammens	xvii
Acknowledgements	xix
Abbreviations	xxi
Introduction	xxiii
Retrocataloguing at KBR	xxiv
The aim of this book	xxviii
1 Cataloguing Today and in the Future	1
Introduction to cataloguing and metadata	1
What is cataloguing and why does it matter in libraries?	1
Metadata's broader impact	2
Key elements of cataloguing records	4
Overview of cataloguing standards	9
Interoperability and data sharing	10
The role of inclusivity in cataloguing	10
The importance of inclusivity in bibliographic records	10
AI's potential role in promoting inclusivity	12
Traditional cataloguing methods versus modern approaches using AI	14
Traditional cataloguing	14
Modern cataloguing using AI	17
AI alone is not enough: the importance of automation in library processes	22
Streamlining cataloguing workflows	22
Enhancing accuracy and reducing human error	24
The evolving role of the cataloguer	25
Power Platform as a solution	26
2 Getting Started with the Power Platform Ecosystem	29
Overview of the Power Platform ecosystem	29
Power Apps	30

Power Automate	32
Power BI	34
Power Pages	34
Copilot Studio	35
Dataverse	35
AI Builder	38
Power Platform licensing	38
Power Apps Premium license	40
Power Apps per app license	40
Power Apps per app meter license (pay-as-you-go)	40
Power Automate Premium license	41
Power Automate per user license	42
Power Automate Process license	42
AI Builder capacity add-on	42
Power Apps Developer Plan	43
3 Integrating Artificial Intelligence	45
Introduction to Microsoft AI Builder	45
Documents	45
Text	46
Structured data	49
Images	49
Setting up the document processing model	50
Choose the type of documents	50
Select the information to extract	51
Create collections	52
Upload your training set	55
Tag the documents	57
Train the model	57
Rename the model	58
Publish the model	58
Incorporate a feedback loop	58
Using the category classification model for subject indexing	60
Selecting your training data	61
Creating the Dataverse table	63
Training the model	64
Things to keep in mind when using the category classification model	64
Category classification model for subject indexing: conclusion	67
Using a GPT-based prompt for subject indexing	68
Entity extraction and key phrase extraction	70
Entity extraction	71
Key phrase extraction	73
Inclusive metadata creation	74
4 Building the Cataloguing Application	77
Planning the application	77
Designing the user interface	79
Simplicity	79

Metadata entry	80
Search functionality	80
Intuitive design	81
Feedback mechanisms	81
Designing the key features	81
Scanning or uploading images	82
Create files or saving data	84
Step-by-step guide: building a cataloguing application	87
Introduction to the application	87
Create your solution	89
Create your Dataverse table	90
Create your AI models	94
Create your Power Automate flows	95
Create your Power App	129
Summary of the application	143
5 Deploying and Maintaining the Cataloguing Application	145
Deploying the Power App	145
Step 1: create separate environments	145
Step 2: set up security roles	147
Step 3: export and import the solution	149
Maintaining the application	150
Regularly review and update the flows and application	151
Monitor application performance	151
Test before deployment	152
Version control	153
Automate maintenance alerts	154
Documentation and providing training and support	154
Troubleshooting common issues	155
Managing and securing data in Dataverse	156
Summary	157
Other cataloguing uses of Power Platform at KBR	157
Uses of Power Platform within the GLAM sector	159
Tables of contents within periodicals	159
Personal letters and diaries	161
Newspapers and periodicals	162
Census records and legal documents	164
Civil registers and church records	165
Photographic archives with captions or annotations	165
Other types of document	166
Uses of Power Platform outside the GLAM sector	167
6 Conclusion	171
References	173
Index	175
