PROJECT ACRONYM AND TITLE: Smart Integrated Maritime Common Good Governance and Coastal Zone Management

FUNDING PROGRAMME: Scientific-Research Project Initiatives of The University of Rijeka (ZIP UNIRI)

PERSON RESPONSIBLE: Borna Debelić, PhD , Associate Professor

FINANCIAL DATA

Project total cost	Overall funding assigned to PFRI
2.535,01 €	2.535,01 €

SUMMARY

Institutional perspective plays a significant role in the complexity of the coastal zone management and governance of the maritime common good. The seventh protocol of Barcelona Convention - ICZM protocol represents a serious institutional foundation for the expansion of the real impact of the Barcelona Convention on to coastal zone management. Improvements of allocation and governance mechanisms regarding coastal zone are in the focus of this research aiming to improve governing mechanisms on the maritime common good using modern scientific approaches and technology. Part of the research interest of this project will be focused on exploring attempts to create improvements in decision and governing mechanisms through cooperation and networking of the stakeholders. Many institutional solutions and governance mechanisms have not proven to be effective and efficient in achieving their goals. Therefore, among the objects of this research are the challenges that subjects, decision makers, institutions and organizations are facing in areas particularly exposed to the inadequacy of existing solutions regarding governing of the maritime common good.
